

**Agilent E5061A/E5062A
ENA Series RF Network Analyzers**

VBA Programmer's Guide

Fourth Edition

FIRMWARE REVISIONS

This manual applies directly to instruments that have the firmware revision A.03.00.
For additional information about firmware revisions, see Appendix A.

Agilent Technologies

Manufacturing No. E5061-90033

February 2007

Manual Printing History

The manual's printing date and part number indicate its current edition. The printing date changes when a new edition is printed (minor corrections and updates that are incorporated at reprint do not cause the date to change). The manual part number changes when extensive technical changes are incorporated.

February 2004	First Edition (part number: E5061-90003)
September 2005	Second Edition (part number: E5061-90013, changes for firmware version A.02.00)
June 2006	Third Edition (part number: E5061-90023, changes for firmware version A.02.10)
February 2007	Fourth Edition (part number: E5061-90033, changes for firmware version A.03.00)

Typeface Conventions

Sample (bold)	Boldface type is used when a term is defined or emphasized.
<i>Sample (Italic)</i>	Italic type is used for emphasis and for titles of manuals and other publications.
[Sample]	Indicates the hardkey whose key label is “Sample”.
[Sample] - Item	Indicates a series of key operations in which you press the [Sample] key, make the item called “Item” on the displayed menu blink by using the [↓] or in other ways, and then press the [Enter] key.

Sample Program Disk

A VBA sample program disk (Agilent part number: E5061-180x1) is furnished with this manual. The disk contains the sample programs used in this manual.

The customer shall have the personal, non-transferable rights to use, copy, or modify SAMPLE PROGRAMS in this manual for the customer’s internal operations. The customer shall use the SAMPLE PROGRAMS solely and exclusively for their own purposes and shall not license, lease, market, or distribute the SAMPLE PROGRAMS or modification of any part thereof.

Agilent Technologies shall not be liable for the quality, performance, or behavior of the SAMPLE PROGRAMS. Agilent Technologies especially disclaims any responsibility for the operation of the SAMPLE PROGRAMS to be uninterrupted or error-free. The SAMPLE PROGRAMS are provided AS IS.

AGILENT TECHNOLOGIES DISCLAIMS ANY IMPLIED WARRANTY OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

Agilent Technologies shall not be liable for any infringement of any patent, trademark, copyright, or other proprietary right by the SAMPLE PROGRAMS or their use. Agilent Technologies does not warrant that the SAMPLE PROGRAMS are free from infringements of such rights of third parties. However, Agilent Technologies will not knowingly infringe or deliver software that infringes the patent, trademark, copyright, or other proprietary right of a third party.

Documentation Map

The following manuals are available for the Agilent E5061A/E5062A.

- ***User's Guide* (Part Number E5061-900x0, attached to Option ABA)**

This manual describes most of the basic information needed to use the E5061A/E5062A. It provides a function overview, detailed operation procedure for each function (from preparation for measurement to analysis of measurement results), measurement examples, specifications, and supplemental information. For programming guidance on performing automatic measurement with the E5061A/E5062A, please see the *Programming Manual*.

- ***Installation and Quick Start Guide* (Part Number E5061-900x1, attached to Option ABA)**

This manual describes installation of the instrument after it is delivered and the basic procedures for applications and analysis. Refer to this manual when you use the E5061A/E5062A for the first time.

- ***Programmer's Guide* (Part Number E5061-900x2, attached to Option ABA)**

This manual provides programming information for performing automatic measurement with the E5061A/E5062A. It includes an outline of remote control, procedures for detecting measurement start (trigger) and end (sweep end), application programming examples, a command reference, and related information.

- ***VBA Programmer's Guide* (Part Number E5061-900x3, attached to Option ABA)**

This manual describes programming information for performing automatic measurement with internal controller. It includes an outline of VBA programming, some sample programming examples, a COM object reference, and related information.

- ***Option 100 Fault Location and Structural Return Loss Measurement User's Guide Supplement* (Part Number E5061-900x4, attached to Option 100)**

This manual describes information for using the fault location and structural return loss measurement functions.

NOTE

The number position shown by “x” in the part numbers above indicates the edition number. This convention is applied to each manual, CD-ROM (for manuals), and sample programs disk issued.

1. Making Effective Use of This Manual	
Contents of This Manual	18
How To Use This Manual	20
Looking Up COM Objects	20
Using Sample Programs	20
2. Introduction to VBA Programming	
Introduction of the E5061A/E5062A Macro Function	24
An Overview of a Control System Based on the Macro Function	25
Implementing a Control System	25
Control Methods	26
Overview of E5061A/E5062A COM Object	27
About COM Object	27
Using COM Object to Control the E5061A/E5062A	27
Major Control Difference between COM Object and SCPI Command	28
3. Operation Basics of the E5061A/E5062A's VBA	
Displaying Visual Basic Editor	30
Initial Screen of Visual Basic Editor	30
Closing Visual Basic Editor	32
Switching to the E5061A/E5062A Measurement Screen	32
Making a Preparation Before Coding	33
A Project and Three Types of Module	33
Displaying a Code Window	34
Coding a VBA Program	38
User Interface Elements of a Code Window	38
Creating a Simple VBA Program	39
Auto-complete Feature	41
Saving a VBA program	42
Saving a Project	42
Saving a Module (Exporting)	43
Loading a VBA Program	45
Loading a Project	45
Loading a Module (Importing)	46
Running a VBA Program	48
Running a previous loaded VBA program	48
Loading and executing program in batch process	50
Stopping a VBA Program	51
Stopping with the Dialog Box Appeared	51
Abruptly Terminating the VBA Program	52
Errors and Debugging	53
Types of Error	53
Using a Debug Tool	54
Printing Output Values in the Echo Window	59
Entering Values Output to the Echo Window	59
Opening the Echo Window	59
Clearing Values Output in the Echo Window	59
Using VBA Online Help	60

Contents

Accessing VBA Online Help	60
Uses Advanced Techniques	62
Accessing a List of E5061A/E5062A COM Objects	62
Using Automatic Library References	63
4. Controlling the E5061A/E5062A	
Detecting the End of Measurement	66
Using the Status Register	66
Using the SCPI.TRIGger.SEQuence.SINGle Object	69
Reading/Writing Measurement Data	71
Executing a Procedure with a Softkey (User Menu Function)	76
Preparation for Using the User Menu Function	76
How to Use the User Menu Function	77
Simple Example	78
5. Controlling Peripherals	
Overview	82
Preparation	82
Programming with VISA	83
STEP 1. Starting Up VISA System.....	84
STEP 2. Connection	84
STEP 3. Communication	85
STEP 4. Disconnection	86
6. Application Programs	
Basic measurement (measuring a band-pass filter)	88
Overview of the program	88
Description of the program	88
Connecting Hard Disk (Shared Folder) of External PC	96
Using VBA program.....	96
Description of operation in VBA program	97
7. COM Object Reference	
COM Object Model	100
Application Objects	100
SCPI Objects	101
COM Object List	102
List by Front Panel Key	102
Notational Rules of COM Objects	113
Object Type	113
Syntax	113
Description	113
Variable	114
Examples.....	114
Related Objects	114
Equivalent Key.....	114
Application Objects	115
ECHO	115

NAME	116
Parse	117

Making Effective Use of This Manual

This chapter provides an overview of this manual as well as useful information to help you navigate through the manual. It also briefly describes how to use this manual, focusing on how you can look up particular COM object.

Contents of This Manual

This is a VBA programming guide with Agilent E5061A/E5062A.

This guide describes programming method mainly aiming at learning how to write a program that controls the E5061A/E5062A using COM objects, focusing on the macro function of the E5061A/E5062A and sample usage with the built-in VBA.

Controlling the E5061A/E5062A using an external controller is not covered by this guide; it is described in *Programmer's Guide*. For remote control using an external controller, see *Programmer's Guide*.

Description in this guide assumes that the reader has learned manual operation of the E5061A/E5062A. Thus, this guide does not describe each feature of the E5061A/E5062A in detail. For detailed information on each feature, see *User's Guide*.

The chapter-by-chapter contents of this manual are as follows.

Chapter 1, “Making Effective Use of This Manual.”

This chapter provides an overview of this manual as well as useful information to help you navigate through the manual. It also briefly describes how to use this manual, focusing on how you can look up particular COM object.

Chapter 2, “Introduction to VBA Programming.”

This chapter introduces you to the E5061A/E5062A's VBA macro function, describes how you can implement your system using the VBA macro function, and provides an overview of the COM objects that come with the E5061A/E5062A.

Chapter 3, “Operation Basics of the E5061A/E5062A's VBA.”

This chapter provides descriptive information on basic operations for creating VBA programs within the E5061A/E5062A's VBA environment; topics include launching Visual Basic Editor, creating, saving, and running VBA programs, and so on.

Chapter 4, “Controlling the E5061A/E5062A.”

This chapter describes how to use the E5061A/E5062A's VBA to control the E5061A/E5062A itself.

Chapter 5, “Controlling Peripherals.”

This chapter explains how to control peripherals connected to the E5061A/E5062A with GPIB by using the software (VISA library) installed in the E5061A/E5062A.

Chapter 6, “Application Programs.”

This chapter describes sample programs (VBA programs) based on actual measurement examples.

Chapter 7, “COM Object Reference.”

This chapter describes the COM object model of the Agilent E5061A/E5062A and the COM object reference in alphabetical order. If you want to look up COM objects by corresponding front panel keys, see “COM object list by front panel key.”

Chapter 8, “Waveform Analysis Library.”

This chapter describes how to use the ripple analysis library and the procedures in the ripple analysis library.

Chapter 9, “Complex Operation Library.”

This chapter describes the complex operation library.

Appendix A, “Manual Changes.”

This appendix contains the information required to adapt this manual to versions or configurations of the E5061A/E5062A manufactured earlier than the current printing date of this manual.

How To Use This Manual

Chapter 3 provides the basic operation of VBA when coding VBA programs, and Chapter 4 provides the description of controlling the E5061A/E5062A and sample program examples that you can use to develop your custom programs. For more information on individual COM object, see Chapter 7, “COM Object Reference.”

Looking Up COM Objects

Chapter 7, “COM Object Reference.” contains a complete reference of COM objects. You can look up a particular COM object in any of the following ways:

Lookup by Abbreviated COM Object Name

The COM object reference is organized alphabetically according to the abbreviated name used as the title for each COM object’s description.

Lookup by Front panel key

Table 7-1 on page 102 provides a complete list of COM objects that correspond to the front panel key tree and indicates the page numbers where the COM objects appear in the COM object reference.

Using Sample Programs

The manual comes with a sample program disk, which contains the source files of the sample programs described in this manual. The disk is DOS-formatted.

Loading a Sample Program

For the method to load a sample program into the E5061A/E5062A VBA, see Section “Loading a VBA Program” on page 45 in the Chapter 3 “Operation Basics of the E5061A/E5062A’s VBA”.

List of the Sample Programs

Table 1-1 shows the file list contained with the VBA sample program disk. To look up the description of a sample program, see the listings under “Sample program” in the index.

Table 1-1 List of the sample programs

Project	Object names of modules in the project	Module type	Content
apl_bsc.vba	mdlBscMeas	Standard module	Program for the basic measurement of the bandpass filter
map_drive.vba	Module1 frmMapDrive	Standard module UserForm	Program for connecting a hard disk (a shared folder) of an external PC to the E5061A/E5062A.
meas_sing.vba	mdlSingMeas frmSingMeas	Standard module UserForm	Program for detecting the end of the measurement using SCPI.TRIGger.SEQuence.SINGle object and SCPI.IEEE4882.OPC object.
meas_srq.vba	mdlSrqMeas frmSrqMeas	Standard module UserForm	Program for detecting the end of the measurement through the status register
meas_user.vba	mdlUserMenu	Standard module	Program for utilizing the user menu function (interrupt processing by the assigned softkey)
read_write.vba	mdlReadWrite frmReadWrite	Standard module UserForm	Program for reading / displaying / writing a formatted data array

NOTE

The sample program disk also contains two definition file for controlling peripherals with VISA library, named “visa32.bas” and “vpptype.bas.”

Making Effective Use of This Manual
How To Use This Manual

2

Introduction to VBA Programming

This chapter introduces you to the E5061A/E5062A's VBA macro function, describes how you can implement your system using the VBA macro function, and provides an overview of the COM objects that come with the E5061A/E5062A.

Introduction of the E5061A/E5062A Macro Function

The E5061A/E5062A has a built-in macro function that allows a single instruction to substitute for multiple instructions. You can have the E5061A/E5062A automatically execute your own macro program that contains a series of VBA (Visual Basic for Application) statements. The macro function allows you to run a variety of applications; you can control not only the E5061A/E5062A but also various peripherals from your own macro code.

The VBA is based on the VB (Visual Basic) programming language. Although the VBA is similar to the VB, they are not the same. The VBA is decreased some of the VB's features and added characteristic features for each application. The E5061A/E5062A VBA is added features for controlling the E5061A/E5062A. For details of difference between the VBA and the VB, refer to Microsoft official guides, and various books on VBA.

For information on the basic operating procedures for the E5061A/E5062A's VBA, see Chapter 3, “Operation Basics of the E5061A/E5062A's VBA,” on page 29. This manual is not meant to be an in-depth guide to VBA programming basics and the syntax of VBA functions and commands. Such in-depth information is covered in VBA Help, Microsoft official guides, and various books on VBA.

The macro function allows you to control the E5061A/E5062A itself as well as various peripherals. You can do the following:

1. Automate repetitive tasks

You can use the E5061A/E5062A's macro function to combine several processes into one. Automating repetitive tasks provides higher efficiency and eliminates human error. Once you have contained repetitive tasks in Sub procedures, you can later call the procedures from other programs, thus allowing effective reuse of programming assets.

2. Implement a user interface

The E5061A/E5062A VBA supports user forms (see “User Form” on page 33) that simplify creating a visual user interface. User forms guide users through common tasks such as performing measurement and entering data, without requiring familiarity with the E5061A/E5062A, thus minimizing the possibility of human error.

An Overview of a Control System Based on the Macro Function

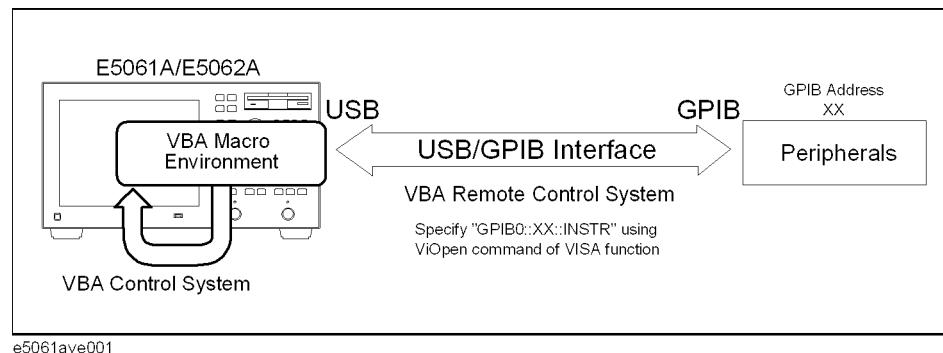

This section describes how you can use the E5061A/E5062A's built-in VBA macro function to implement a system that controls the E5061A/E5062A and peripherals, and what command sets are available for such purposes.

Implementing a Control System

Macro-based control systems are classified into two types: As shown in Figure 2-1, a VBA control system controls the E5061A/E5062A itself while a VBA remote control system controls peripherals. When you use the macro function to control peripherals, you must connect the E5061A/E5062A with the peripherals through USB/GPIB interface, and configure them to communicate over VISA (Virtual Instrument Software Architecture). For information on programming using the VISA library, refer to “Programming with VISA” on page 83.

Figure 2-1

Configuration example of control system using macro environment

Required Equipment

1. E5061A/E5062A
2. Peripherals and/or other instruments that serve your purpose
3. USB/GPIB interface

NOTE

To use the VBA remote control system, you need to set the USB/GPIB interface correctly. For detail, refer to *User's Guide*.

NOTE

Do not connect two or more USB/GPIB interfaces.

Introduction to VBA Programming

An Overview of a Control System Based on the Macro Function

Control Methods

The command set you can use differs depending on whether you use the macro function to control the E5061A/E5062A or a peripheral.

Controlling the E5061A/E5062A

When you want to control the E5061A/E5062A itself, you can create a program using COM objects within the E5061A/E5062A VBA environment. COM objects that come with the E5061A/E5062A include seven objects specific to the COM interface and COM objects that correspond to SCPI commands.

For information on using E5061A/E5062A's COM objects, see Chapter 7, “COM Object Reference,” on page 99. For information on using SCPI commands, see the “SCPI Command Reference” in the *E5061A/E5062A Programmer’s Guide*.

Controlling a Peripheral

When you want to control a peripheral, you can create a program using VISA library functions within the E5061A/E5062A VBA environment.

For information on using the VISA library, see Chapter 5, “Controlling Peripherals,” on page 81. For a complete description of VISA functions, refer to the VISA library’s online help. You can access this online help by double-clicking a file named visa.hlp contained in the CD-ROM (Agilent part No. E5061-905xx).

For information on the GPIB commands available with a particular peripheral, refer to the documentation that comes with the peripheral.

Overview of E5061A/E5062A COM Object

The E5061A/E5062A VBA environment provides COM objects that support controlling the E5061A/E5062A. This section provides an overview of COM objects as well as considerations for using the E5061A/E5062A's COM objects. For more information on the E5061A/E5062A's COM objects and the comparison with SCPI commands, refer to Chapter 7, "COM Object Reference," on page 99.

The definitions and specifications of COM are beyond the scope of this guide. Such in-depth information is covered in a variety of books on COM.

About COM Object

When you control the E5061A/E5062A through the macro function, you can use COM objects as components of your application. The functionality of the E5061A/E5062A's COM objects is exposed through properties and methods.

Property

A property allows you to read or write a setting or attribute of an object. With the E5061A/E5062A, you can use properties to set or read the settings of the E5061A/E5062A.

You can find properties in the list of object types in Chapter 7, "COM Object Reference," on page 99.

Method

A method allows you to manipulate an object in a particular way. With the E5061A/E5062A, you can use methods to perform specific tasks.

You can find methods in the list of object types in Chapter 7, "COM Object Reference," on page 99.

Event

An event means an operation from outside that the program can recognize such as clicking a mouse. The E5061A/E5062A detects events that a specific softkey is pressed using the `UserMenu_OnPress(ByVal Key_id As Long)` on page 121 procedure to execute the assigned procedure.

Using COM Object to Control the E5061A/E5062A

When you want to control the E5061A/E5062A, you can use COM objects alone or in conjunction with SCPI commands and the `Parse` on page 117 object. The latter method is a little slower than the former method because the `Parse` on page 117 object is used to parse the messages of SCPI commands. For instructions on using the E5061A/E5062A's VBA Editor to create a program that uses COM objects, refer to Chapter 3, "Operation Basics of the E5061A/E5062A's VBA," on page 29.

Major Control Difference between COM Object and SCPI Command

While the control using SCPI commands allows SRQ (Service Request) interrupts through the status reporting mechanism, the control using COM objects does not support SRQ interrupts. Instead of SRQ interrupts, you can use the **WaitOnSRQ** object to suspend the program until the E5061A/E5062A is put into the desired state. For a detailed example of use, see “WaitOnSRQ” on page 124.

3

Operation Basics of the E5061A/E5062A's VBA

This chapter provides descriptive information on basic operations for creating VBA programs within the E5061A/E5062A's VBA environment; topics include launching Visual Basic Editor, creating, saving, and running VBA programs, and so on.

Displaying Visual Basic Editor

This section describes how to launch Visual Basic Editor.

Step 1. From the E5061A/E5062A measurement screen, launch Visual Basic Editor using one of the following methods:

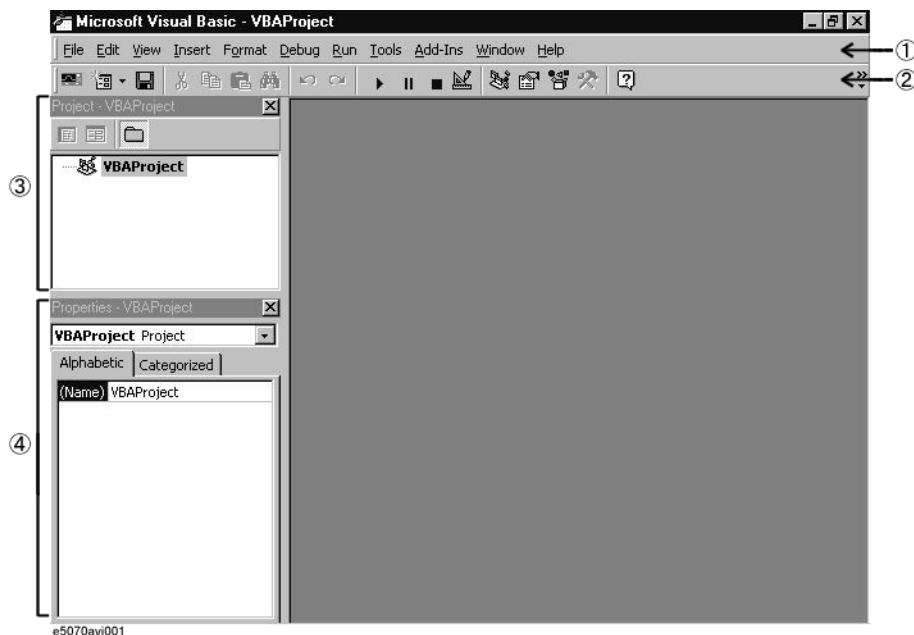

- **[Macro Setup] - VBA Editor**
- Press **[Alt] + [F11]** on the keyboard.

Initial Screen of Visual Basic Editor

When you launch Visual Basic Editor, it displays the initial screen, which contains a number of windows as shown in Figure 3-1. The initial screen provides the following GUI elements:

Figure 3-1

Example of Visual Basic Editor initial screen

1. Menu Bar

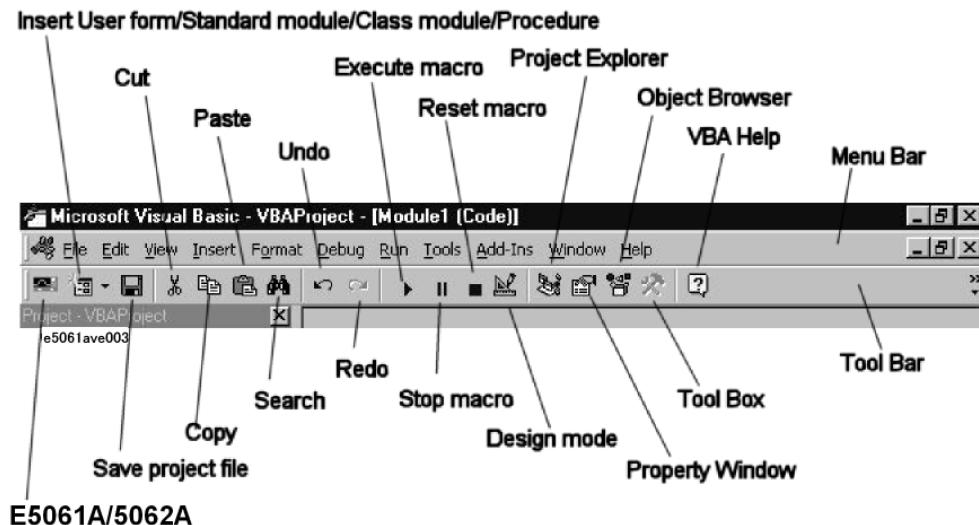

Clicking one of the menu labels brings up the corresponding menu. The menu bar can be used as the primary method to navigate through E5061A/E5062A's VBA environment.

2. Toolbar

The toolbar provides access to commonly used commands via icon buttons; these commands are a subset of the commands accessible from the menu bar. For the description of the buttons on the standard toolbar, see Figure 3-2.

Figure 3-2

Buttons on the standard toolbar

3. Project Explorer

Within the E5061A/E5062A's VBA environment, you can develop your application as a project that consists of a number of files (modules). Project Explorer shows a list of all files (modules) that make up a project. The list also includes files (modules) created or loaded in Visual Basic Editor. For information on modules, refer to “A Project and Three Types of Module” on page 33.

Step 1. To display the project explorer, do one of the following:

- On the **View** menu, click **Project Explorer**.
- Press **[Ctrl] + [R]** on the keyboard.
- On the toolbar, click “Project Explorer” icon (Figure 3-2).

4. Property Window

A property window shows the settings (label, font, color, size, etc.) of a control (such as a command button or text box) placed on the user form. For information on user forms, refer to “User Form” on page 33.

You can also set properties by programming in the code window.

Step 1. To display the project explorer, do one of the following:

- On the **View** menu, click **Properties Window**.
- Press **[F4]** on the keyboard.
- On the toolbar, click “Property Window” icon (Figure 3-2).

Closing Visual Basic Editor

This section describes how to quit Visual Basic Editor.

Step 1. Close the Visual Basic Editor using one of the following methods:

- On Visual Basic Editor's **File** menu, click **Close and Return to E5062**.
- Within Visual Basic Editor, press **[Alt] + [Q]** on the keyboard.
- **[Macro Setup] - Close Editor**(E5061A/E5062A measurement screen)

NOTE

Whenever you launch Visual Basic Editor, it automatically displays the project files you were working with in the previous session. However, once you turn off the power to the E5061A/E5062A, the project files kept in memory will be lost; therefore, it is strongly recommended to save your VBA programs before you turn off the power.

Switching to the E5061A/E5062A Measurement Screen

You can switch to the E5061A/E5062A measurement screen without closing Visual Basic Editor.

Step 1. To switch to the E5061A/E5062A measurement screen, do one of the following:

- On the **View** menu, click **E5062**.
- Press **[Alt] + [F11]** on the keyboard.
- On the toolbar, click “E5061A/E5062A” icon (Figure 3-2).
- Press the **[Focus]** key on the E5061A/E5062A front panel.

Making a Preparation Before Coding

A Project and Three Types of Module

Project Explorer (Figure 3-1) displays a list of files (modules) that are used in the E5061A/E5062A VBA. This section describes a project composed of a number of files (modules) and three types of modules (“user form”, “standard,” and “class”). Each type of module serves its own purposes as described below.

Project

When you develop an application within the E5061A/E5062A's VBA environment, you use a number of VBA program files (modules), and manage them as one project. The project is saved with the file extension “.vba”.

User Form

A user form contains controls such as buttons and text boxes. You can code event-driven procedures that are invoked when a particular event occurs on a particular control, thereby creating a user interface. The user form is saved with the file extension “.frm”.

Standard module

A standard module contains a collection of one or more procedures (subprograms enclosed between Sub and End Sub). One typical use of a standard module is to contain shared subroutines and globally called functions. The standard module is saved with the file extension “.bas”.

Class Module

A class module contains both data and procedures and acts as one object. Once you have created a class module that serves as an object, you can create any number of instances of that object by naming each instance as an object variable. While each procedure must be unique in a standard module, you can have multiple instances of an object created through a class module. The class module is saved with the file extension “.cls”.

Operation Basics of the E5061A/E5062A's VBA Making a Preparation Before Coding

Displaying a Code Window

The code windows appear on the Visual Basic Editor by inserting the modules in a project. You can do coding (programming) on this code windows practically.

The E5061A/E5062A's VBA environment does not allow you to manage multiple projects. When the current project is existing in the Visual Basic Editor by loading the saved project file, you can replace the current project with a new project by the following method from the E5061A/E5062A measurement screen.

- [Macro Setup] - New Project

NOTE

When you replace the current project with a new project, the message whether or not the current project is saved may appear. If you want to save the project, click **Yes** button to display a dialog box for saving (Figure 3-6 on page 42). For saving the project, see “Saving a Project” on page 42.

Inserting the User Form

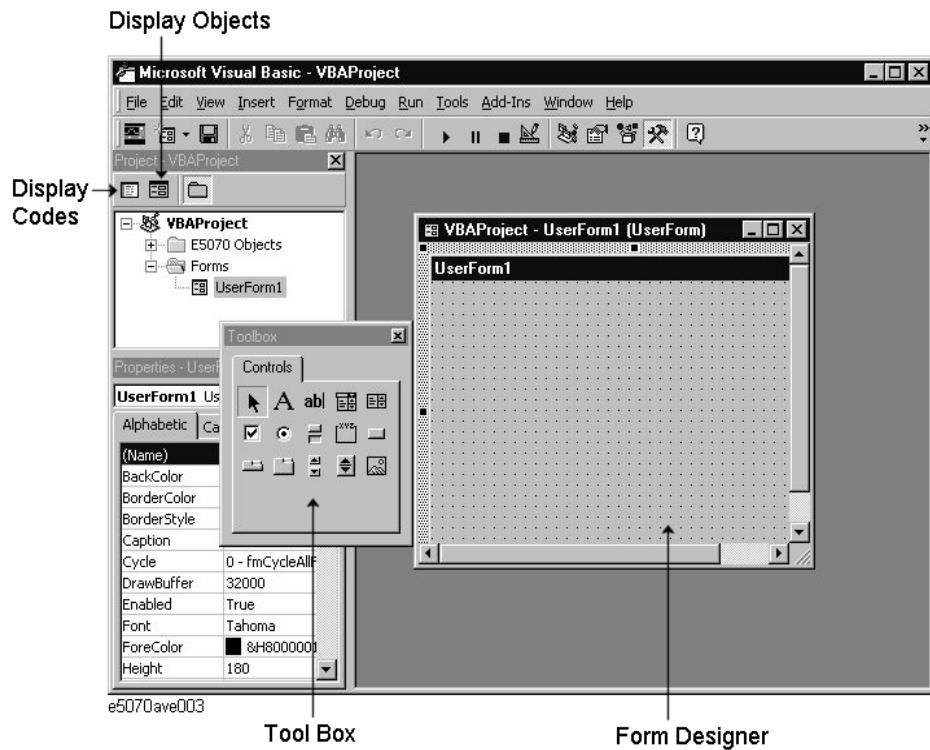

Within Visual Basic Editor, do one of the following to add a user form to your project (this brings up such a window as shown in Figure 3-3):

- On the **Insert** menu, click **UserForm**.
- On the toolbar, click “Insert User Form/Standard Module/Class Module/Procedure” icon (Figure 3-2), and click **UserForm**.
- In Project Explorer (Figure 3-1), right-click the “VBAProject” icon, and click **Insert - UserForm**.

NOTE

Adding a user form does not automatically open the code window for that user form. To open the code window, click the “Show Code” icon (Figure 3-3) in Project Explorer (Figure 3-1) or double-click a control placed on the user form.

Figure 3-3 Adding a user form

Operation Basics of the E5061A/E5062A's VBA Making a Preparation Before Coding

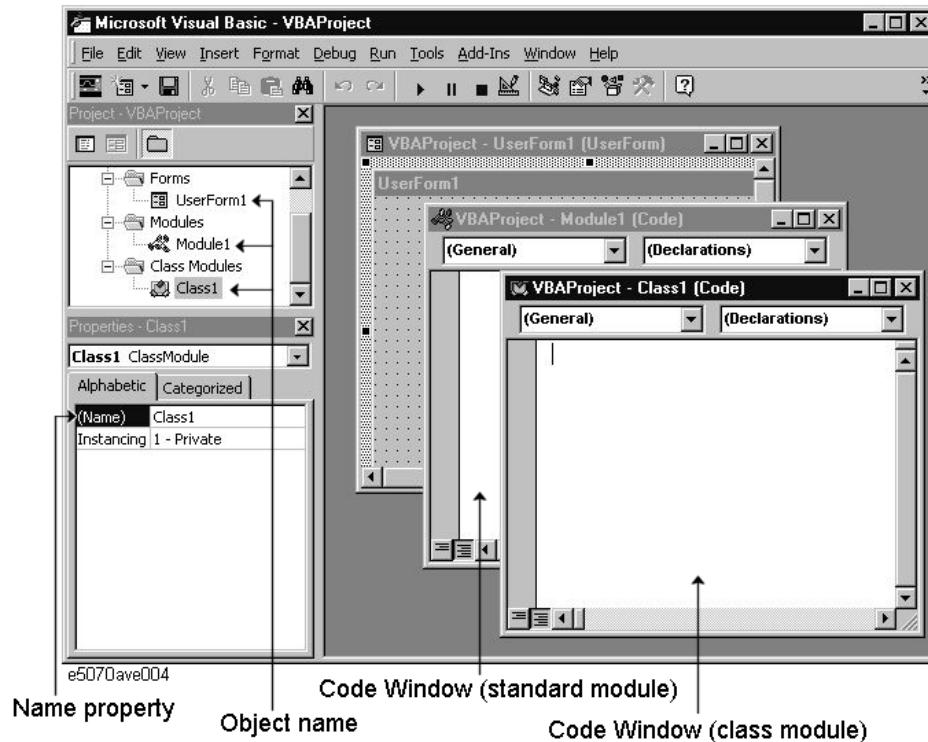

Inserting the Standard Module

Within Visual Basic Editor, do one of the following to add a standard module to your project (this brings up such a window as shown in Figure 3-4):

- On the **Insert** menu, click **Module**.
- On the toolbar, click “Insert User Form/Standard Module/Class Module/Procedure” icon (Figure 3-2), and click **Module**.
- In Project Explorer (Figure 3-1), right-click the “VBAProject” icon, and click **Insert - Module**.

Figure 3-4

Adding a standard module/class module

Inserting the Class Module

Within Visual Basic Editor, do one of the following to add a class module to your project (this brings up such a window as shown in Figure 3-4):

- On the **Insert** menu, click **ClassModule**.
- On the toolbar, click “Insert User Form/Standard Module/Class Module/Procedure” icon (Figure 3-2), and click **ClassModule**.
- In Project Explorer (Figure 3-1), right-click the “VBAProject” icon, and click **Insert - ClassModule**.

Deleting Modules

You can delete any unnecessary module from the project within Visual Basic Editor. The following procedure assumes that you want to delete a class module named “Class1”.

Step 1. In Project Explorer (Figure 3-1), click the “Class1” class module under the “Class Modules” icon to highlight it.

Step 2. Delete the “Class1” class module using one of the following methods:

- On the **File** menu, click **Remove Class1....**
- Click the right mouse button, and click **Remove Class1....**

Step 3. When you are prompted to confirm whether to export (save) “Class1”, click **No**. Alternatively, you can click **Yes** if you want to save the module.

Coding a VBA Program

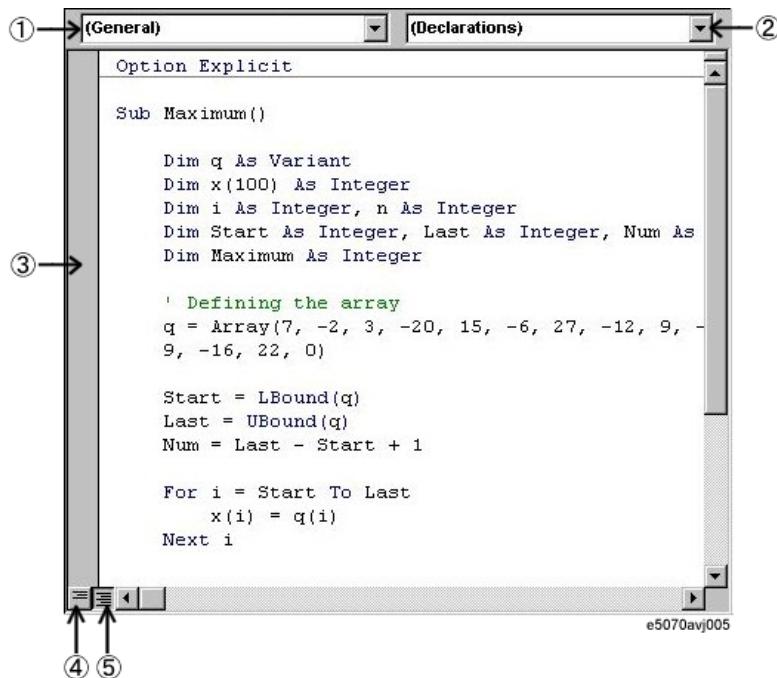

This section provides descriptive information on the user interface elements of a code window that lets you code a VBA program, and walks through a sample program (procedure) that finds the maximum value contained in an array so you can gain insight into how to create your own programs.

User Interface Elements of a Code Window

A code window is where you code a VBA program. When you are working with a user form, you can open the code window for that user form by double-clicking a control (such as a button or text box) placed on the form. Similarly, when you are working with a standard or class module, you can open the code window associated with that module by double-clicking the module's icon in Project Explorer (Figure 3-1).

Figure 3-5

Code window for a standard module

1. Object box

Provides a list of objects currently used within the code window.

2. Procedure box

Provides a list of procedures that reside within the code window. When you are working with a user form, this provides a list of events (actions such as click or double-click).

3. Margin indicator bar

Primarily intended for use when debugging a program.

4. Show Procedure button

Displays only the procedure at the cursor position.

5. Show Module button

Displays the entire program contained in the code window.

Creating a Simple VBA Program

This section walks through a sample program that finds the maximum value contained in an array while breaking down the code into a number of blocks and describing what they do. Line numbers are added for description purpose only, and do not appear in the actual program source code.

Example 3-1

Sample program that finds the maximum value contained in an array

```
10| Option Explicit
20|
30| Sub Maximum()
40|
50|     Dim q As Variant
60|     Dim x(100) As Integer
70|     Dim i As Integer, n As Integer
80|     Dim Start As Integer, Last As Integer, Num As Integer
90|     Dim Maximum As Integer
100|
110|     ' Defining the array
120|     q = Array(7, -2, 3, -20, 15, -6, 27, -12, 9, -5, 18, 23, _
130|         9, -16, 22, 0)
140|
150|     Start = LBound(q)
160|     Last = UBound(q)
170|     Num = Last - Start + 1
180|
190|     For i = Start To Last
200|         x(i) = q(i)
210|     Next i
220|
230|     Maximum = x(Start)
240|
250|     For n = Start + 1 To Last
260|         If x(n) > Maximum Then Maximum = x(n)
270|     Next n
280|
290|     MsgBox Maximum
300|
310| End Sub
```

Operation Basics of the E5061A/E5062A's VBA Coding a VBA Program

Let us break down the code into a number of blocks and see what they do.

- Line 10 This instruction mandates explicit declaration of variables.
- Lines 30 to 310 The code enclosed between Sub Maximum() and End Sub will be executed within the E5061A/E5062A's macro environment. Thus enclosed code is called a procedure. In this example, "Maximum" is the procedure name.
- Lines 50 to 90 These lines declare data types of variables using Dim statements. A statement is the minimum instruction unit based on the syntax. The sample program declares the variable "q" as Variant, and the variables "x(100)", "i", "n", "Start", "Last", "Num", and "Maximum" as Integer. For a complete list of statements and data types supported by VBA, see VBA Online Help.
- Line 110 Any text preceded by a comment indicator ('') is treated as a comment.
- Lines 120 to 130 These lines use VBA's Array function to initialize the array. The q() array contains elements delimited with commas in the ascending order of index numbers (zero-based). A combination of a space and underscore (_) is used to continue the statement across two or more lines.
- Line 150 Stores the starting index number of the q array into the Start variable.
- Line 160 Stores the last index number of the q array into the Last variable.
- Line 170 Stores the number of elements in the q array into the Num variable.
- Lines 190 to 210 and Lines 250 to 270 The code within each For ...Next statement is iterated until the counter reaches the specific number.
- Line 200 Stores the contents of the q array (Variant) into the x variable (Integer).
- Line 230 Uses the first element of the x array as the tentative maximum value.
- Line 260 Compares the tentative maximum value with each of elements that follow; if an element is larger than the tentative maximum value, then that element is used as the tentative maximum value.
- Line 290 Uses a message box function to display the maximum value. For a complete list of functions supported by VBA, see VBA Online Help.

NOTE

The sample program in Example 3-1 consists of a single procedure contained in a single module. However, when you deal with procedures and variables across multiple modules, you should be aware of the scope of variables and procedures.

Auto-complete Feature

When you use COM objects in Visual Basic Editor, the editor's auto-complete feature allows you to easily type in keywords without misspelling them.

The following procedure assumes that you are entering the SCPI.INITiate(Ch).CONTinuous on page 280 object.

- Step 1.** In a standard module, type **sub main** and press the **[Enter]** key. **End Sub** is automatically added.
- Step 2.** Typing **scpi** followed by a dot (.) brings up a list of classes under the SCPI class.
- Step 3.** Typing **in** automatically moves focus to **INITiate** in the list box.
- Step 4.** Typing **(** brings up a list of indexes.
- Step 5.** Typing **1)**. brings up a list of classes under the INITiate class.
- Step 6.** Typing **c** automatically moves focus to **CONTinuous** in the list box.
- Step 7.** Typing **=** brings up a list box for setting a Boolean value (**True/False**).
- Step 8.** Typing **t** automatically moves focus to **True**.
- Step 9.** Pressing the **[Enter]** key completes the statement: SCPI.INITiate(1).CONTinuous = True.

Saving a VBA program

You can save VBA programs either as one complete project or on a module by module basis.

Saving a Project

When you opt to save your program as one complete project, you can have the files (modules) making up the project into a single package. A project is saved as a .vba file. You can save your program to a project file using one of the following two methods:

Saving a Project from Visual Basic Editor

Step 1. Open the Save As dialog box by doing one of the following:

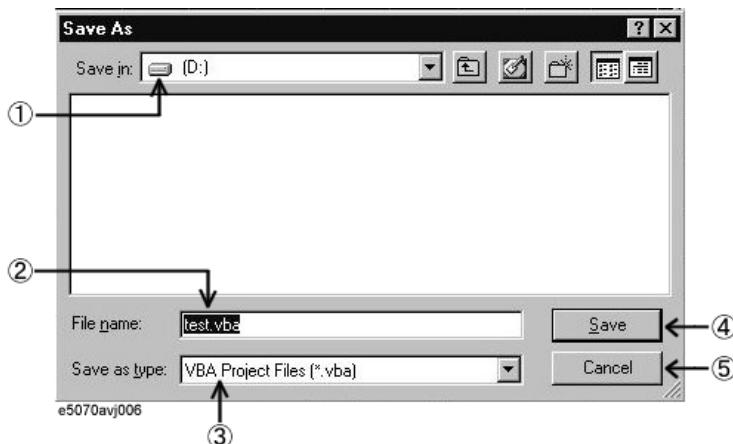

- On the **File** menu, click **Save xxx.VBA**. "xxx" represents the file name.
- On the toolbar, click "Save Project File" icon (Figure 3-2).
- Press **[Ctrl] + [S]** on the keyboard.

Step 2. The Save As dialog box (Figure 3-6) appears. Specify the file name and location (drive or folder) and click **Save**.

The Save As dialog box has the following user interface elements:

Figure 3-6

Save As dialog box

- 1. Save in:** Specify the location (drive or folder) where to save the file.
- 2. File name** Type in the file name.
- 3. Save as type:** Select the type of the file you are saving. Normally, you should select **VBA Project Files (*.vba)**.
- 4. Save:** Clicking this button saves the project.
- 5. Cancel:** Clicking this button closes the Save As dialog box and brings you back to the main screen.

E5061A/E5062A Saving a Project from the E5061A/E5062A Measurement Screen

- Step 1.** Display the E5061A/E5062A measurement screen following the instructions given in “Switching to the E5061A/E5062A Measurement Screen” on page 32.
- Step 2.** Open the Save As dialog box using the following key sequence:
 - **[Macro Setup] - Save Project**
- Step 3.** The Save As dialog box (Figure 3-6) appears. Specify the file name and location (drive or folder) and click **Save**.

Saving a Module (Exporting)

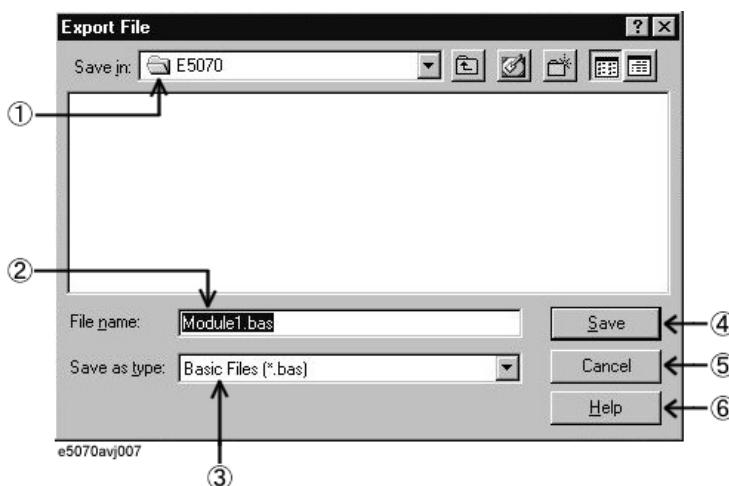

Alternatively, you can save each module (user form, standard, or class) of your VBA program individually. To save a module, you must use Visual Basic Editor. User forms are saved as .frm files, standard modules as .bas files, and class modules as .cls files.

- Step 1.** In Project Explorer (Figure 3-1), click the file name that appears under the desired module icon to highlight it.
- Step 2.** Open the Export File dialog box by doing one of the following:
 - On the **File** menu, click **Export File....**
 - Click the right mouse button, and click **Export File....**
 - Press **[Ctrl] + [E]** on the keyboard.
- Step 3.** The Export File dialog box (Figure 3-7) appears. Specify the file name and location (drive or folder) and click **Save**.

The Export File dialog box has the following user interface elements:

Figure 3-7

Export File dialog box

- 1. Save in:** Specify the location (drive or folder) where to save the file.
- 2. File name** Type in the file name.

Operation Basics of the E5061A/E5062A's VBA Saving a VBA program

- 3. Save as type:** Select the type of the module you are saving. The type that corresponds to the module you are saving is selected by default. Normally, you should use the default.
- 4. Save:** Clicking this button saves the module.
- 5. Cancel:** Clicking this button closes the Export File dialog box and brings you back to the main screen.
- 6. Help:** Clicking this button brings up VBA Online Help.

Loading a VBA Program

Once you have saved a project or module file, you can load it later whenever necessary.

Loading a Project

You can load a saved project file either from the E5061A/E5062A measurement screen or by specifying that the project file be automatically loaded when the power is turned on.

Loading a Project from the E5061A/E5062A Measurement Screen

Step 1. Access the Open dialog box using the following key sequence:

- [Macro Setup] - Load Project

NOTE

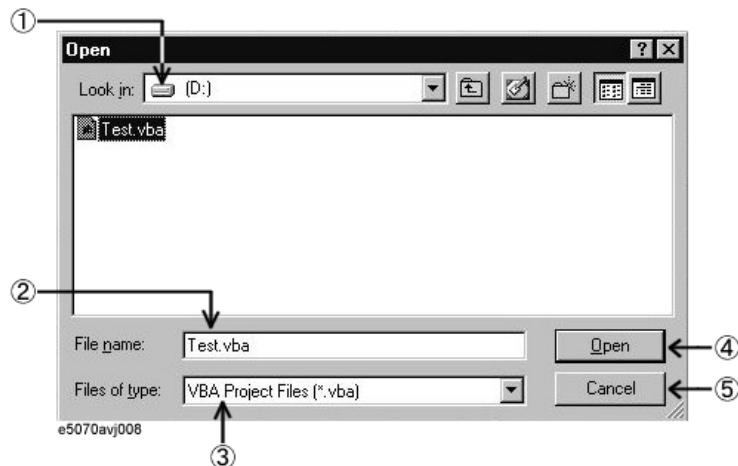

When the another project has already been loaded on the Visual Basic Editor, the message whether or not the current project is saved may appear. If you want to save the project, click **Yes** button to display a dialog box for saving (Figure 3-6 on page 42). For saving the project, see “Saving a Project” on page 42.

Step 2. The Open dialog box (Figure 3-8) appears. Specify the file name and location (drive or folder) of the file you want to load and click **Open**.

The Open dialog box has the following user interface elements:

Figure 3-8

Open dialog box

- 1. Look in:** Specify the location (drive or folder) where the project resides.
- 2. File name:** Specify the file name of the project you want to load.
- 3. Files of type:** Select the type of the file you want load. Normally, you should select **VBA Project Files (*.vba)**.
- 4. Open:** Clicking this button loads the project.
- 5. Cancel:** Clicking this button closes the Open dialog box and brings you back to the main screen.

Operation Basics of the E5061A/E5062A's VBA Loading a VBA Program

Automatically Loading a Project at Power-On

Once you have saved a project file that satisfies the following conditions, the project will be automatically loaded whenever the power is turned ON.

Auto-loaded project	Conditions
Directory where the project resides.	A:\ (A:\) or D:\ (D:\)
Project file name	autoload.vba *1

*1.Upper/lower case insensitive.

NOTE	If there is the file named “autoload.vba” in both the A drive and the D drive, the file in the A drive is used.
-------------	---

Loading a Module (Importing)

To load a saved module into a project, you must use Visual Basic Editor.

Step 1. In Project Explorer (Figure 3-1), click the file name that appears under the desired module icon to highlight it.

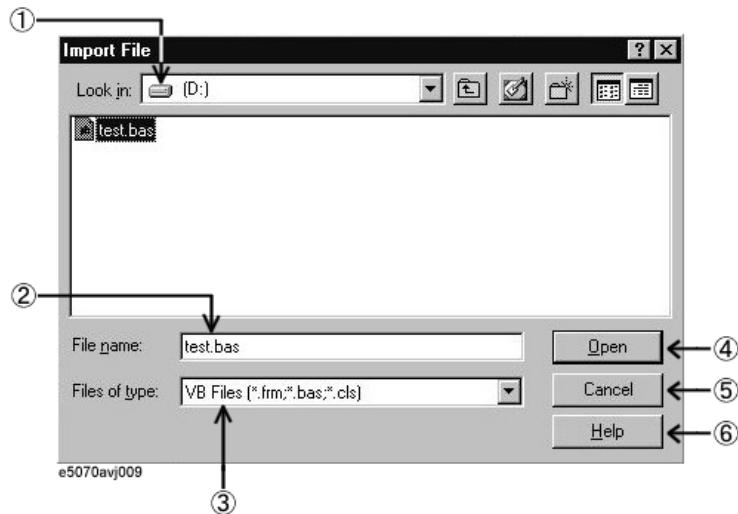

Step 2. Open the Import File dialog box by doing one of the following:

- On the **File** menu, click **Import File...**
- In Project Explorer (Figure 3-1), right-click the “VBAProject” icon, and click **Import File...**
- Press **[Ctrl] + [M]** on the keyboard.

Step 3. The Import File dialog box (Figure 3-9) appears. Specify the file name and location (drive or folder) of the file (module) you want to load and click **Open**.

The Import File dialog box has the following user interface elements:

Figure 3-9 Import File dialog box

- 1. Look in:** Specify the location (drive or folder) where the module resides.
- 2. File name:** Specify the file name of the module you want to load.
- 3. Files of type:** Select the type of the file you want load. Normally, you should select **VB Files (*.frm;*.bas;*.cls)**.
- 4. Open:** Clicking this button loads the module.
- 5. Cancel:** Clicking this button closes the Import File dialog box and brings you back to the main screen.
- 6. Help:** Clicking this button brings up VBA Online Help.

Running a VBA Program

The E5061A/E5062A provides 2 methods to execute a VBA program: executing a program that you previously loaded and loading and executing a program in a batch process. The execution status of the VBA program is indicated in the instrument status bar, as shown in Figure 3-10. “Run” indicates that the program is running while “Stop” indicates that the program is stopped.

Figure 3-10 **Instrument status bar indicating the status of the VBA program**

Running a previous loaded VBA program

The E5061A/E5062A allows you to run a previous loaded VBA program using one of the four methods listed below.

Running a Program from Visual Basic Editor

Step 1. Open the Macros dialog (Figure 3-11) box by doing one of the following:

- On the **Run** menu, click **Run Macro**.
- On the **Tools** menu, click **Macros....**
- On the toolbar, click “Run Macro” icon (Figure 3-2).
- Press **[F5]** on the keyboard.

NOTE

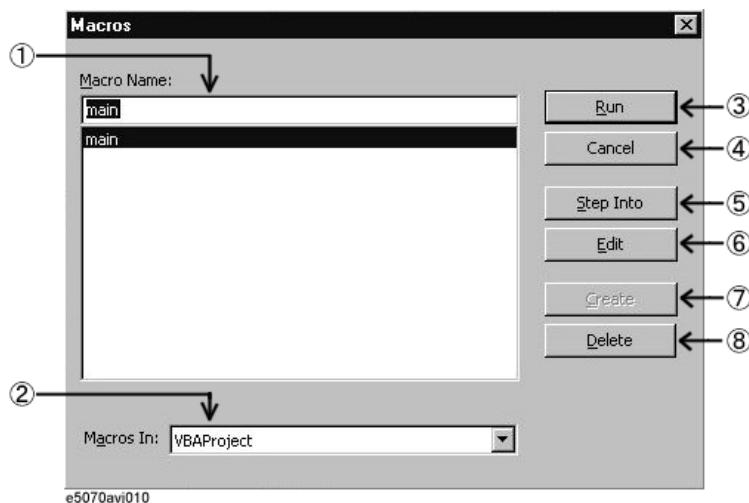

Doing the above steps with the cursor positioned within a procedure in the code window immediately runs the program without displaying the Macros dialog box.

Step 2. In the Macros dialog box, select the VBA program (procedure name) you want to run, and click the **Run** button.

The Macros dialog box has the following user interface elements:

Figure 3-11

Macros dialog box

- 1. Macro Name:** Select the VBA program (procedure name) you want to run from the list box so its name appears here.
- 2. Macro In:** Specify the project that contains the VBA program you want to run. Normally, use the default.
- 3. Run:** Clicking this button runs the selected VBA program (procedure).
- 4. Cancel:** Clicking this button closes the Macros dialog box and brings you back to the main screen.
- 5. Step Into:** Clicking this button brings up Visual Basic Editor and put it into step-in mode, where the selected VBA program is run step by step. This mode is primarily intended for use when debugging a VBA program. For more information on step-in mode, see “Debug Toolbar” on page 54.
- 6. Edit:** Displays the code of the selected VBA program. You can use this for re-editing your code.
- 7. Create:** This button is normally dimmed.
- 8. Delete:** Clicking this button deletes the selected VBA program. Take care not to inadvertently delete your VBA program before saving it.

NOTE

The Macros dialog provides access to subprograms (procedures enclosed between Sub and End Sub) created in a standard module.

Operation Basics of the E5061A/E5062A's VBA Running a VBA Program

Running a Program from the E5061A/E5062A Measurement Screen

The E5061A/E5062A allows you to run a program from E5061A/E5062A screen using one of the four methods listed below.

Step 1. Display the E5061A/E5062A measurement screen following the instructions given in “Switching to the E5061A/E5062A Measurement Screen” on page 32.

Step 2. Run the VBA program (procedure) using the following key sequence:

- **[Macro Setup] - Select Macro - Module xxx**

where “**Module**” is the object name (Name property shown in the property window: see Figure 3-4 on page 36) and “**xxx**” is the procedure name.

- Press the **[Macro Run]** key on the E5061A/E5062A front panel. For a program to be run from the measurement screen, its procedure name must be “Main” (subprogram enclosed between Sub Main() and End Sub), and its object name (Name property as displayed in the property window) must be “Module1”.

NOTE

When you are working with the E5061A/E5062A measurement screen, the E5061A/E5062A's macro environment only provides access to those VBA programs that are created as subprograms (enclosed between Sub and End Sub) in a standard module.

Loading and executing program in batch process

This section describes how to load and execute a program (VBA project) in a batch process by pressing the softkey corresponding to the program name.

Step 1. Save the VBA program (VBA project file) into the following folder.

D:\VBA

NOTE

This feature is available only for programs saved in D:\VBA. This feature is not available for programs saved in subfolders of D:\VBA.

NOTE

When copying a VBA program to D:\VBA from another folder, copy all the files necessary to execute the program to appropriate folders. When copying a factory-installed VBA program into D:\VBA, choose only its VBA project file.

Step 2. Press **Macro Setup**

Step 3. Press **Load & Run**.

Step 4. Press the softkey corresponding to the VBA project file name of the program you want to execute. The pressed VBA project is loaded and the program whose procedure name is set to "Main" (subprogram enclosed between Sub Main() and End Sub) and whose object name (Name property as displayed in the property window) is set to "Module" is executed.

NOTE

There is no limit to the number of VBA project files that can be saved in D:\VBA.

However, the maximum number of programs that can be displayed as softkeys is 50.

- File names of the VBA projects saved in D:\VBA are displayed as softkeys in alphabetical order.
- The maximum number of characters that can be displayed in a softkey is 12. If a file name has 13 or more characters, "..." is added to the 12th character from the beginning of the program name and displayed. In this case a .vba extension is omitted.

Stopping a VBA Program

Stopping with the Dialog Box Appeared

This section describes how to break a procedure during the execution of a VBA program (display a dialog box as shown in Figure 3-12 using forced interrupts).

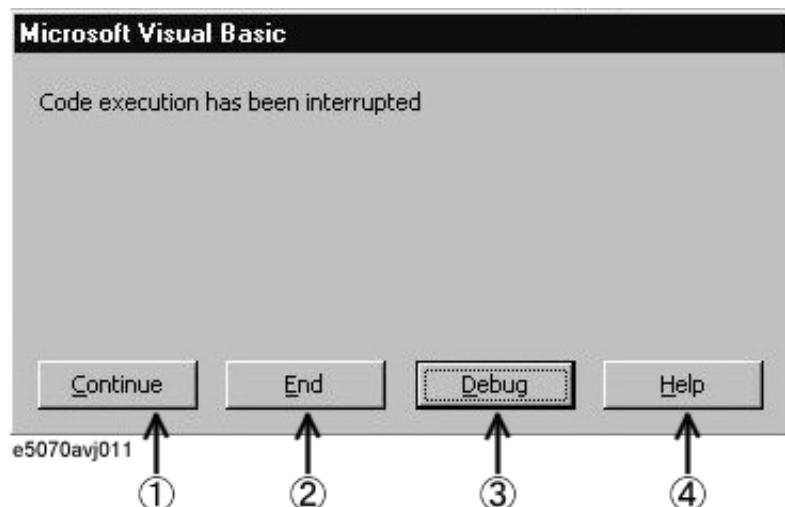

Step 1. To break the running VBA program, do one of the following:

- On the **Run** menu, click **Break**.
- On the toolbar, click “Break Macro” icon (Figure 3-2).
- Press **[Ctrl] + [Break]** on the keyboard.
- **[Macro Setup] - Stop**(E5061A/E5062A measurement screen)
- Press the **[Macro Break]** key on the E5061A/E5062A front panel.

Step 2. A dialog box as shown in Figure 3-12 is displayed through forced interrupts, and the program is suspended.

Figure 3-12

Dialog box that appears when a VBA program is suspended

1. Continue: Resumes the execution of the program.

Operation Basics of the E5061A/E5062A's VBA Stopping a VBA Program

- 2. End:** Terminates the VBA program.
- 3. Debug:** Displays a run-time error.
- 4. Help:** Brings up VBA Online Help.

Abruptly Terminating the VBA Program

This section describes how to abruptly terminate a running procedure. When abruptly terminating the VBA program by the below methods, the “Program interrupted” message is shown in the instrument status bar on the bottom of the LCD display.

Step 1. To terminate the running VBA program, do one of the following:

- On the **Run** menu, click **Reset**.
- On the toolbar, click “Reset Macro” icon (Figure 3-2).
- Insert an *End* statement into your code.

Errors and Debugging

Types of Error

Errors in VBA programs are classified into the following two types:

Syntax errors

A syntax error is generated when Visual Basic Editor detects an invalid statement that violates the Visual Basic syntax rules. For example, misspelled keywords generate syntax errors. An error dialog box appears that indicates the error message, and highlight the invalid statement in red. To get detailed information on the error, click the **HELP** button in the error dialog box to display the help topic on the error. You cannot run the macro until you correct the syntax error.

The E5061A/E5062A VBA environment is by default configured to automatically check for syntax errors, but you can disable the auto syntax check feature using the following steps:

- Step 1.** On the **Tools** menu, click **Options....**
- Step 2.** On the **Editor** tab, clear the **Auto Syntax Check** check box.
- Step 3.** Click the **OK** button.

Run-time Errors

A run-time error is generated when a VBA program attempts to execute an invalid statement at run time. When a run-time error is generated, the program is stopped at the invalid statement, and an error dialog box as shown in Figure 3-12 appears. You can terminate the program by clicking the **END** button in the error dialog box. Also, you can click the **DEBUG** button in the error dialog box to identify the statement that caused the error. In this case, the statement in question is highlighted in yellow.

NOTE

Some run-time errors occur under particular conditions, even though a program run without occurring the errors under normal conditions. For example, the “Target value not found” error that occurs when a program that analyzes the results using the Marker Bandwidth Search feature fail to perform bandwidth search because the marker is not in the appropriate position, the “Ecal module not in RF path” error that occurs when a program that performs calibrations using a ECal module fail to measure the calibration data because the ECal module is not appropriately connected to test ports, and so on. To avoid interruption of the program by these errors, you can handle these errors like lines 730 to 960 in Example 6-1 on page 91.

Using a Debug Tool

The E5061A/E5062A's VBA environment provides a variety of debug tools that help you identify logical errors. Detailed information on using the debug tools is covered in VBA Online Help and books on VBA.

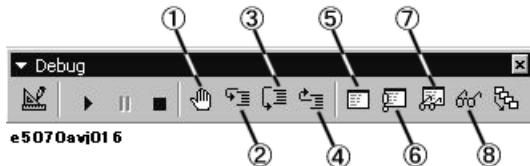

Debug Toolbar

The debug toolbar (Figure 3-13) provides tool buttons that allow you to easily access various debug tools. To display the debug toolbar, do the following:

- Step 1. On the **View** menu, click **Toolbars - Debug**.

Figure 3-13

Debug toolbar

1. Set/clear break points (keyboard: **[F9]**)
Puts a break point at the cursor position or clears an existing break point.
2. Step-in (keyboard: **[F8]**)
Runs the VBA program step by step. If the current program contains a call to another procedure, that procedure is also run step by step.
3. Step-over (keyboard: **[Shift]+[F8]**)
Runs the VBA program step by step. If the current program contains a call to another procedure, that procedure is run as one line.
4. Step-out (keyboard: **[Ctrl]+[Shift]+[F8]**)
Executes the remaining lines of the function where the execution point is currently placed.
5. Local window
Opens the local window that shows the current values of local variables.
6. Immediate window (keyboard: **[Ctrl]+[G]**)
Opens the immediate window that evaluates entered values of variables or expressions.
7. Watch window
Opens the watch window that displays the current value of a specified expression.
8. (keyboard: **[Shift]+[F9]**)
Displays the current value of a specified expression in a dialog box.

Setting a Break Point

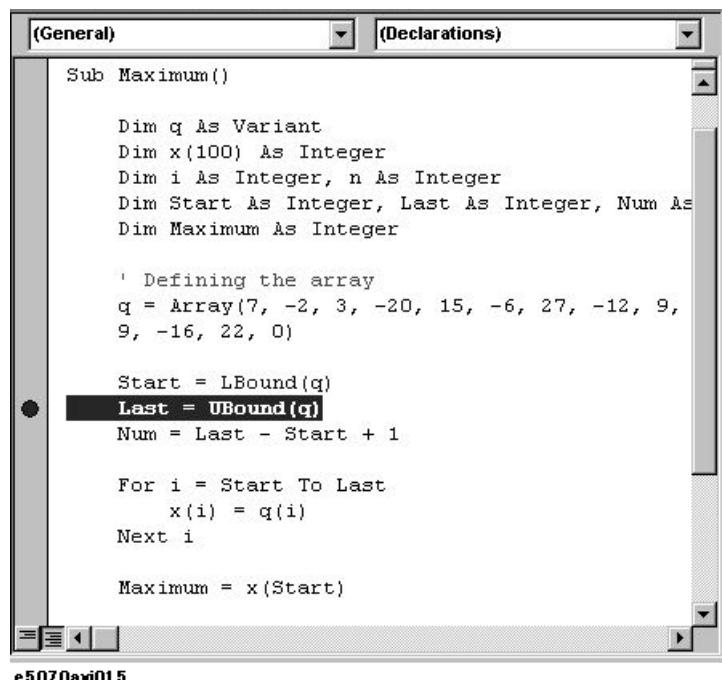

By placing a break point at a particular statement in a VBA program, you can automatically suspend the program when it is executed to that statement.

Step 1. When you put a break point at a line, the line is highlighted in umber as shown in Figure 3-14. To set a break point do one of the following:

- Place the cursor at the desired line of code, and click the “Set/clear break points” button (Figure 3-13: 1) on the debug toolbar.
- Click anywhere in the margin indicator bar of the code window.

Figure 3-14

Setting a break point

```
Sub Maximum()
    Dim q As Variant
    Dim x(100) As Integer
    Dim i As Integer, n As Integer
    Dim Start As Integer, Last As Integer, Num As Integer
    Dim Maximum As Integer

    ' Defining the array
    q = Array(7, -2, 3, -20, 15, -6, 27, -12, 9,
    9, -16, 22, 0)

    Start = LBound(q)
    Last = UBound(q)
    Num = Last - Start + 1

    For i = Start To Last
        x(i) = q(i)
    Next i

    Maximum = x(Start)
```

Operation Basics of the E5061A/E5062A's VBA Errors and Debugging

Monitoring Variable or Property Values

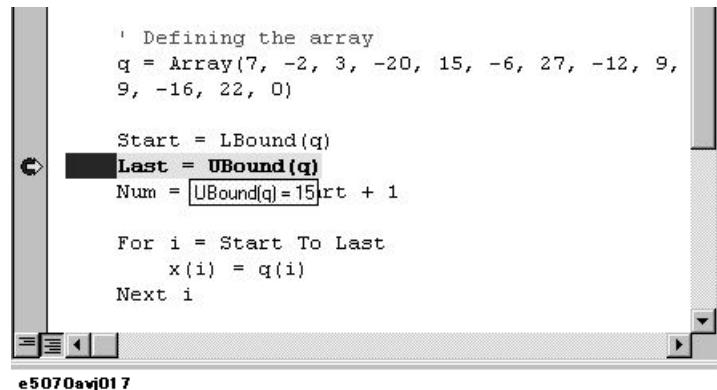

With your VBA program suspended, you can use the following debug tool to monitor variables or properties. To do this, you must set a break point, run the VBA program, and suspend it.

Data Hint

When you point to the variable or expression of interest, Data Hint shows the current value as shown in Figure 3-15.

Figure 3-15

Data Hint

The screenshot shows the Microsoft Visual Basic for Applications (VBA) interface. A code editor window displays the following VBA code:

```
' Defining the array
q = Array(7, -2, 3, -20, 15, -6, 27, -12, 9,
9, -16, 22, 0)

Start = LBound(q)
Last = UBound(q)
Num = UBound(q) + 1

For i = Start To Last
    x(i) = q(i)
Next i
```

A tooltip window titled "Data Hint" is overlaid on the screen, showing the value of the variable "Last" as "15". The tooltip has a dark gray background with white text. The original code in the editor window is partially obscured by the tooltip.

Immediate Window

To display the immediate window, click the “Immediate Window” button (Figure 3-13:6) on the debug toolbar.

In the immediate window, enter a question mark (?) followed by the variable or expression whose value you want to check, and press the Enter key, as shown in Figure 3-16. The current value appears in the line that follows.

Figure 3-16

Immediate window

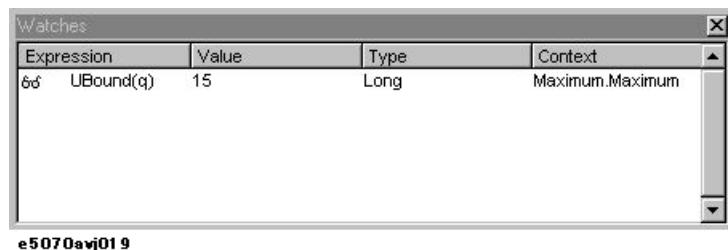

The screenshot shows the Immediate window of the VBA IDE. The window title is "Immediate". The input line contains the command "?Start" and the output line shows the value "0".

Watch Window

To display the watch window (Figure 3-17), click the “Watch Window” button (Figure 3-13: 7) on the debug toolbar.

Figure 3-17

Watch window

Step 1. To open the Add Watch dialog box (Figure 3-18), do the following:

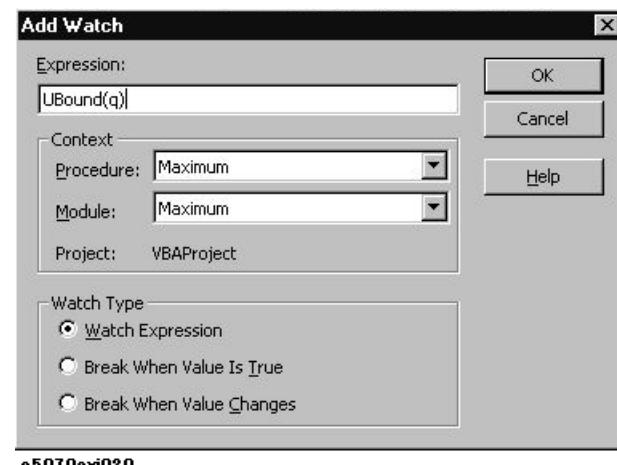

- On the **Debug** menu, click **Add Watch....**

Step 2. As shown in Figure 3-18, you can specify an expression of interest as a watch expression to always monitor its value.

Step 3. Click the **OK** button.

Figure 3-18

Add Watch dialog box

Operation Basics of the E5061A/E5062A's VBA Errors and Debugging

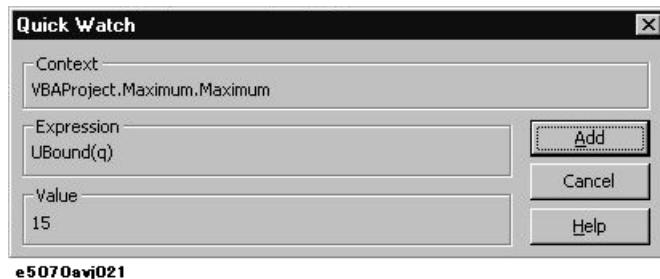

Quick Watch

In the code window, select a variable or expression whose value you want to watch. On the debug toolbar, click the “Quick Watch” button (Figure 3-13:8) to open the Quick Watch dialog box (Figure 3-19). The dialog box displays the current value of your specified variable or expression.

Also, you can click the **Add** button in the Quick Watch dialog box to specify the current expression as a watch expression.

Figure 3-19

Quick watch

Printing Output Values in the Echo Window

The echo window, which appears in the lower part of the E5061A/E5062A measurement screen, can be used to display a message or the return value (data) of an object.

Entering Values Output to the Echo Window

You can use the COM objects listed below to enter values output to the echo window. For more information on each object, see Chapter 7, “COM Object Reference.”.

- ECHO on page 115
- SCPI.DISPlay.ECHO.DATA on page 240

Opening the Echo Window

You can use the COM objects listed below to open the echo window. For more information on each object, see Chapter 7, “COM Object Reference.”.

- SCPI.DISPlay.TABLE.TYPE on page 249
- SCPI.DISPlay.TABLE.STATE on page 248

Alternatively, you can also open the echo window using the following key sequence:

- **[Macro Setup] - Echo Window (ON)**

Clearing Values Output in the Echo Window

You can use the COM object shown below to clear values output to the echo window. For more information on this object, see Chapter 7, “COM Object Reference.”.

- SCPI.DISPlay.ECHO.CLEAR on page 240

Alternatively, you can also clear values output to the echo window using the following key sequence:

- **[Macro Setup] - Clear Echo**

Using VBA Online Help

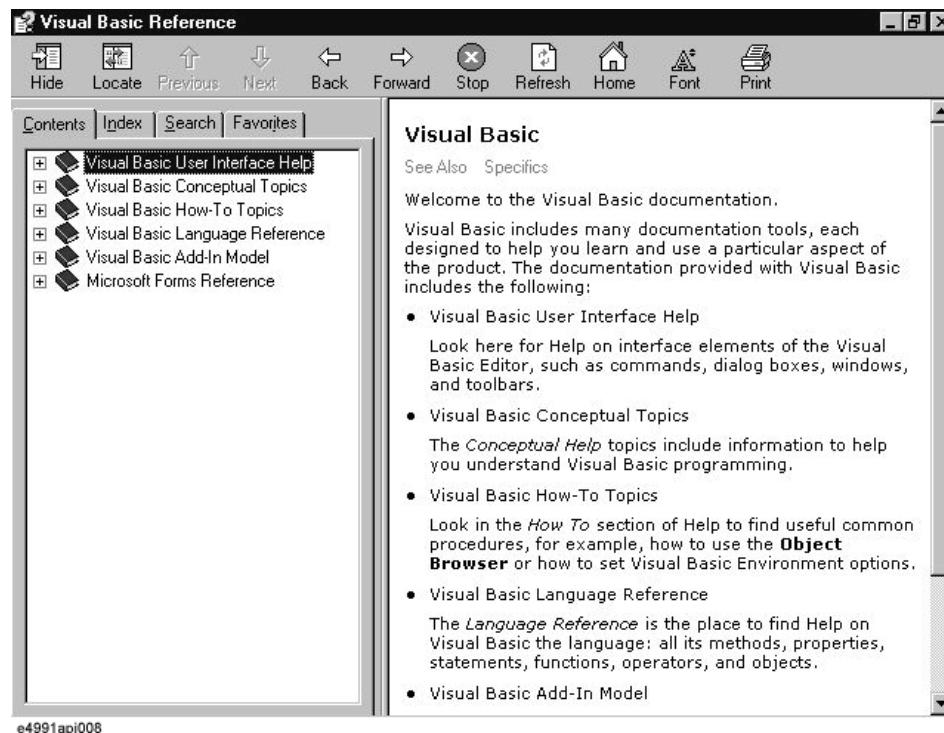

VBA Online Help provides useful topics, such as the VBA terminology or how to use a particular feature. In VBA Online Help, you can find a topic of interest through the Contents or by entering specific keywords.

Accessing VBA Online Help

Step 1. From Visual Basic Editor, do one of the following to access the VBA Online Help screen (Figure 3-20):

- On the **Help** menu, click **Microsoft Visual Basic Help**.
- Press **[F1]** on the keyboard.
- On the toolbar, click “VBA Help” icon (Figure 3-2).

Figure 3-20

Using the Contents Tab

Step 1. Clicking the **Contents** tab in the VBA Online Help screen brings up the items listed below. The E5061A/E5062A VBA Online Help has a hierarchical table of contents. Click an item to expand it, and then find a topic of interest.

- Visual Basic User Interface Help
- Visual Basic Conceptual Topics
- Visual Basic How-To Topics
- Visual Basic Language Reference
- Visual Basic Add-In Model
- Microsoft Forms Reference

When you need information on using Visual Basic Editor, use User Interface Help and How-To Topics as primary sources of information. Formats of VBA programs are covered in Visual Basic Conceptual Topics. Properties and methods supported by VBA are covered in Visual Basic Language Reference and Visual Basic Add-In Model. Information on using user forms is covered in Microsoft Forms Reference.

Using the Index Tab

Step 1. In the VBA Online Help screen, click the **Index** tab, and enter a keyword(s) into the text box. For example, you may wish to search for “Sub” or “With” when you are writing your own code.

Looking up a Keyword in the Code within Visual Basic Editor

When you want to know the usage or meaning of a keyword contained in a sample program or some other code, you can quickly access the help topic on that keyword by moving the cursor to the keyword and pressing **[F1]**.

Uses Advanced Techniques

Accessing a List of E5061A/E5062A COM Objects

The E5061A/E5062A VBA environment provides COM objects that support controlling the E5061A/E5062A. When you are developing a program using E5061A/E5062A COM objects, you can access a list of E5061A/E5062A COM objects by opening Object Browser within Visual Basic Editor.

Step 1. To open Object Browser, do one of the following:

- On the **View** menu, click **Object Browser**.
- On the toolbar, click “Object Browser” icon (Figure 3-2).

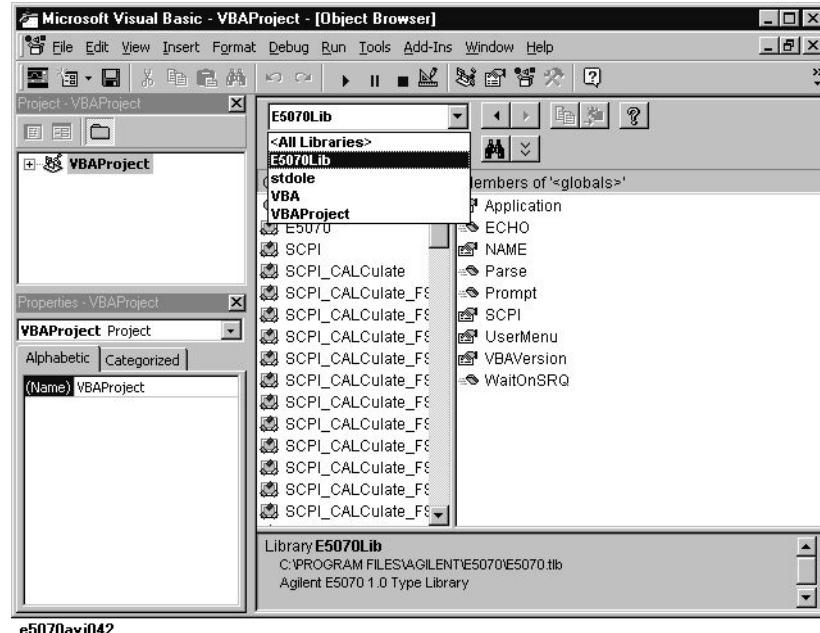

Step 2. Select **E5062Lib** from the Project/Library box to display the E5061A/E5062A library as shown in Figure 3-21.

NOTE

There are some COM objects NOT used in controlling with E5061A/E5062A VBA in the list of the E5061A/E5062A COM objects displayed on the Object Browser. The COM objects NOT used in controlling with E5061A/E5062A VBA are not described in the Chapter 7, “COM Object Reference,” on page 99.

Figure 3-21

How to use Object Browser

Using Automatic Library References

For libraries that satisfy the following conditions, the library reference will be automatically set whenever a new project is created and loaded (**[Macro Setup] - New Project**).

Automatically referenced libraries	Conditions
Directory where the library resides.	D:\Agilent (D:\Agilent)
Extensions of libraries	olb, tlb, dll, or ocx

To check the library reference setting, you must use Visual Basic Editor.

Follow these steps to check the library reference setting.

- On the **Tools** menu, click **References....**

NOTE

A project sets the library reference when the project is created. Therefore, if the existing project is loaded, libraries added after the development of the project are not automatically set in the library reference.

**Operation Basics of the E5061A/E5062A's VBA
Uses Advanced Techniques**

4

Controlling the E5061A/E5062A

This chapter describes how to use the E5061A/E5062A's VBA to control the E5061A/E5062A itself.

Detecting the End of Measurement

This chapter uses sample programs to demonstrate how to trigger the instrument to start a new measurement cycle and how to detect the end of a measurement cycle. The trigger system is responsible for such tasks as detecting the start of a measurement cycle (triggering) and enabling/disabling measurement on each channel. For a detailed description of the trigger system and the concept of triggering, see Chapter “Making a Measurement” in *E5061A/E5062A Programmer’s Guide* gives a detailed description.

You can detect the end of measurement by using either the status register or the SCPI.TRIGger.SEQuence.SINGle on page 428 object.

Using the Status Register

The status of the E5061A/E5062A can be detected through the status register. For a complete description of the status report mechanism, including the specifications of each bit of the status register, see Appendix “Status Reporting System” in *E5061A/E5062A Programmer’s Guide*.

If your program is based on SPC1 commands, you can use SRQ (Service Request) interrupts to detect the end of measurement. For more information, see Section “Waiting for the End of Measurement” in *E5061A/E5062A Programmer’s Guide*.

On the other hand, if your program is based on COM objects, SRQ interrupts are not available; instead, you can use the following object to suspend the program until SRQs are generated upon completion of measurement.

- WaitOnSRQ on page 124

The sample program disk contains a sample program, named “meas_srq.vba”, that demonstrates how to use the status register to suspend the program until the end of measurement. This VBA program consists of the following modules:

NOTE

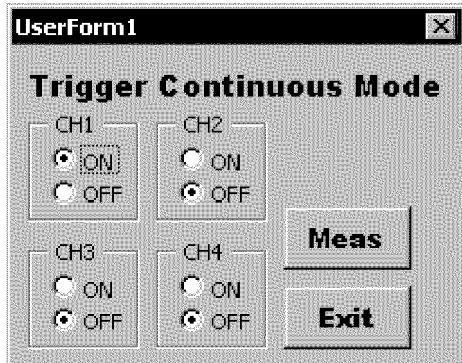

For information on loading VBA programs, see “Loading a VBA Program” on page 45.

Object name	Module type	Content
frmSrqMeas	UserForm	Uses the status register to wait for the end of measurement.
mdlSrqMeas	Standard module	Invokes a UserForm.

When you run this VBA program, a UserForm as shown in Figure 4-1 appears. For how to use each element in Figure 4-1, see the following description.

Figure 4-1

The UserForm when running the Example 4-1 program

1. The program turns on Continuous Activation mode for each channel and determines whether to enable or disable each channel for measurement.
2. The program triggers the instrument to start a new measurement cycle, waits for the end of measurement, and then displays a message. For detail, see the description of the code window.
3. The program exits, and the UserForm disappears.

In Visual Basic Editor, open the UserForm (object name: frmSrqMeas), and double-click the **Meas** or **Exit** button to bring up the code window. The following is the description of the subprograms associated with the respective buttons.

Procedure called when the user clicks the **Exit** button on the UserForm (lines 10 to 50)

Line 30 Unloads the UserForm from the memory, and terminates the program.

Procedure called when the user clicks the **Meas** button on the UserForm (lines 70 to 340)

Line 110 Hides the UserForm (object name: frmSrqMeas) from the screen.

Line 130 Displays 4 channel windows.

Line 140 Sets the trigger source to "bus".

Lines 160 to 190 These lines turn on or off Continuous Activation mode for each channel depending on whether the corresponding option buttons are on or off. By default, the mode is turned on for channel 1 only.

Lines 210 to 220 These lines configure the instrument so that operation status event register's bit 4 is set to 1 only when operation status condition register's bit 4 is changed from 1 to 0 (negative transition).

Line 230 Enables the operation status event register's bit 4.

Line 240 Enables the status byte register's bit 7.

Line 250 Clears the status byte register and operation status event register.

Line 260 Triggers the instrument to start a measurement cycle.

Line 270 Verifies that the instrument is in a measurement cycle, and suspends the program until the end of measurement. The time-out is set to 100 seconds (maximum value).

Controlling the E5061A/E5062A Detecting the End of Measurement

- Lines 280 to 300 These lines display a measurement completion message upon detecting the end of measurement.
- Line 320 Displays the UserForm (object name :frmSrqMeas) on the screen.

Example 4-1

Using SRQs to detect the end of measurement (object name: frmSrqMeas)

```
10| Private Sub cmdExit_Click()
20|
30|     Unload Me
40|
50| End Sub
60|
70| Private Sub cmdMeas_Click()
80|
90|     Dim Cond As Boolean
100|
110|    frmSrqMeas.Hide
120|
130|    SCPI.DISPlay.Split = "d12_34"
140|    SCPI.TRIGger.SEQuence.Source = "bus"
150|
160|    SCPI.INITiate(1).CONTinuous = optOn1.Value
170|    SCPI.INITiate(2).CONTinuous = optOn2.Value
180|    SCPI.INITiate(3).CONTinuous = optOn3.Value
190|    SCPI.INITiate(4).CONTinuous = optOn4.Value
200|
210|    SCPI.STATUS.OPERation.PTRansition = 0
220|    SCPI.STATUS.OPERation.NTRansition = 16
230|    SCPI.STATUS.OPERation.ENABle = 16
240|    SCPI.IEEE4882.SRE = 128
250|    SCPI.IEEE4882.CLS
260|    SCPI.IEEE4882.TRG
270|    WaitOnSRQ Cond, 100000
280|    If Cond = True Then
290|        MsgBox "Measurement Completion"
300|    End If
310|
320|    frmSrqMeas.Show
330|
340| End Sub
```

Using the SCPI.TRIGger.SEQuence.SINGle Object

When you trigger the instrument by issuing the **SCPI.TRIGger.SEQuence.SINGle** on page 428 object, you can use the **SCPI.IEEE4882.OPC** on page 276 object to suspend the program until the end of measurement.

The sample program disk contains a sample program, named “meas_sing.vba”, that demonstrates how to use the **SCPI.TRIGger.SEQuence.SINGle** on page 428 object to suspend the program until the end of measurement. This VBA program consists of the following modules:

Object name	Module type	Content
frmSingMeas	UserForm	Uses the SCPI.TRIGger.SEQuence.SINGle and SCPI.IEEE4882.OPC objects to suspend the program until the end of measurement.
mdlSingMeas	Standard module	Invokes a UserForm.

When you run this VBA program, a window as shown in Figure 4-1 appears. For how to use each element, see Figure 4-1 in the previous section.

In Visual Basic Editor, open the UserForm (object name:frmSingMeas), and double-click the **Meas** or **Exit** button to bring up the code window. The following is the description of the subprograms associated with the respective buttons.

Procedure called when the user clicks the **Exit** button on the UserForm (lines 10 to 50)

Line 30 Unloads the UserForm from the memory, and terminates the program.

Procedure called when the user clicks the **Meas** button on the UserForm (lines 70 to 280)

Line 110 Hides the UserForm (object name: frmSingMeas) from the screen.

Line 130 Displays 4 channel windows.

Line 140 Sets the trigger source to "bus".

Lines 160 to 190 These lines turn on or off Continuous Activation mode for each channel depending on whether the corresponding option buttons are on or off. By default, the mode is turned on for channel 1 only.

Line 210 Triggers the instrument to start a measurement cycle.

Line 220 Executes the **SCPI.IEEE4882.OPC** object to suspend the program until the value of 1 is returned indicating the end of measurement.

Line 240 Displays a measurement completion message.

Line 260 Displays the UserForm (object name: frmSingMeas) on the screen.

**Controlling the E5061A/E5062A
Detecting the End of Measurement**

Example 4-2

**Using the SCPI.TRIGger.SEQuence.SINGle object to suspend the program until
the end of measurement (object name:frmSingMeas)**

```
10| Private Sub cmdExit_Click()
20|
30|     Unload Me
40|
50| End Sub
60|
70| Private Sub cmdMeas_Click()
80|
90|     Dim Dmy As Long
100|
110|    frmSingMeas.Hide
120|
130|    SCPI.DISPlay.Split = "d12_34"
140|    SCPI.TRIGger.SEQuence.Source = "bus"
150|
160|    SCPI.INITiate(1).CONTinuous = optOn1.Value
170|    SCPI.INITiate(2).CONTinuous = optOn2.Value
180|    SCPI.INITiate(3).CONTinuous = optOn3.Value
190|    SCPI.INITiate(4).CONTinuous = optOn4.Value
200|
210|    SCPI.TRIGger.SEQuence.SINGle
220|    Dmy = SCPI.IEEE4882.OPC
230|
240|    MsgBox "Measurement Completion"
250|
260|    frmSingMeas.Show
270|
280| End Sub
```

Reading/Writing Measurement Data

This section describes how to process the E5061A/E5062A's internal data. You can use these internal data arrays: corrected data arrays, corrected memory arrays, formatted data arrays, formatted memory arrays, and stimulus data arrays. For more information on the internal data arrays, see Section "Internal Data Processing" in *E5061A/E5062A Programmer's Guide*.

To read/write a formatted data array, formatted memory array, corrected data array, or corrected memory array use the following objects:

- SCPI.CALCulate(Ch).SELected.DATA.FDAta on page 141
- SCPI.CALCulate(Ch).SELected.DATA.FMEmory on page 142
- SCPI.CALCulate(Ch).SELected.DATA.SDAta on page 143
- SCPI.CALCulate(Ch).SELected.DATA.SMEmory on page 144

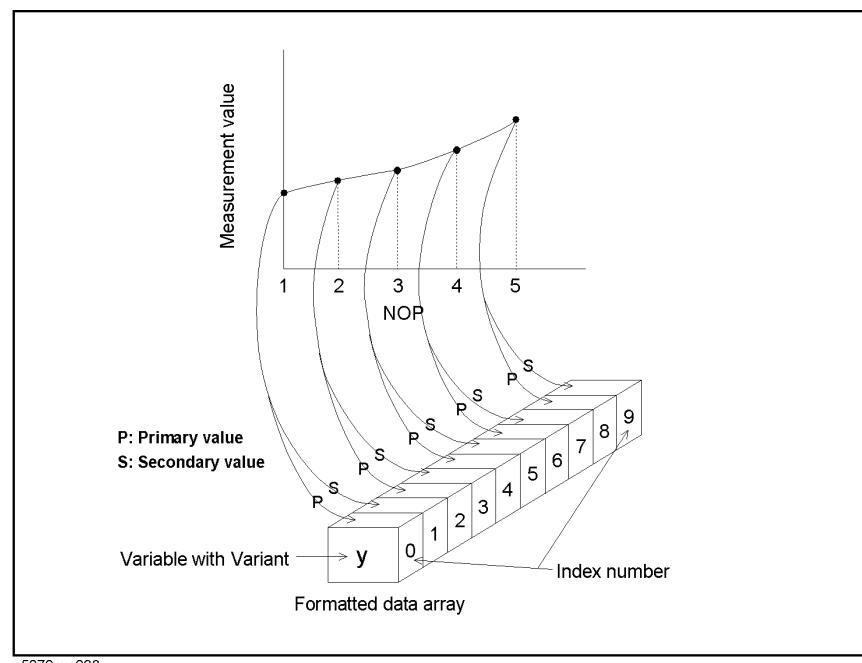

To read a c stimulus data array, use the following objects:

- SCPI.SENSe(Ch).FREQuency.DATA on page 355

The E5061A/E5062A VBA allows you to deal with multiple pieces of data through variables of Variant type. Variant variables can contain any type of data, allowing you to deal with array data without being aware of the number of elements. For example, a formatted data array that includes 5 measurement points is stored as shown in Figure 4-2. Note that a formatted data array always contains 2 data items per measurement point, whichever data format is used. For more information on contained data, see Section "Internal Data Processing" in *E5061A/E5062A Programmer's Guide*; you can find a table that describes the relationship between contained data items and data formats.

Figure 4-2

Example storing data into a Variant variable

Controlling the E5061A/E5062A

Reading/Writing Measurement Data

NOTE

When you use one of the objects listed above, the base index number of the array is always 0 even if the declaration section contains the "Option Base 1" statement, which specifies the use of the base array index of 1.

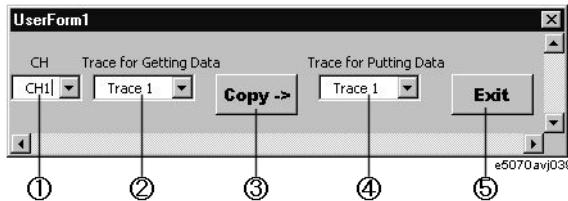

For example, you may wish to read the formatted data array for a particular trace in its entirety (including all measurement points), display the data in the echo window, and then write the data into another trace. How to implement such a process can be better understood with the aid of a sample program.

The sample program disk contains a sample program, named "read_write.vba", that demonstrates how to read and write measurement data. This VBA program consists of the following modules:

Object name	Module type	Content
frmReadWrite	UserForm	Reads, displays, and writes a formatted data array.
mdlReadWrite	Standard module	Invokes a UserForm.

When you run this VBA program, a window as shown in Figure 4-3 appears. For how to use each element in Figure 4-3, see the following description.

Figure 4-3 The UserForm when running the Example 4-3 program

1. The program lets the user specify the channel to be controlled.
2. The program lets the user specify which trace's formatted data array to read (source trace).
3. The program reads the formatted data array for the trace specified by the user, display the measurement results in the echo window, and write the data into the trace specified by the user. For detail, see the description of the code window.
4. The program lets the user specify which trace's formatted data array to overwrite (target trace).
5. The program exits, and the window disappears.

In Visual Basic Editor, open the UserForm (object name: frmReadWrite), and double-click the entire UserForm or the **Copy** -> or **Exit** button to bring up the code window. The following is the description of the subprograms associated with the respective buttons.

Procedure called when the user clicks the **Copy** button on the UserForm (lines 10 to 520)

- Lines 90 to 160 These lines identify the selected items in each list and store them into the variables TrGet, TrPut, and ActCh.
- Lines 180 to 210 If the specified target trace is not displayed, these lines display that trace.
- Lines 230 to 250 These lines make active the specified trace (TrGet: source trace) in the specified channel(ActCh) and hold the sweep.
- Line 260 Reads the number of measurement points for the specified channel (ActCh) and stores that number into the Nop variable.
- Line 280 Reads the formatted data array for the active trace (source trace) and store the data into the FmtData variable.
- Line 290 Reads the stimulus array for the specified channel (ActCh) and stores the data into the Freq variable.
- Line 330 Reads the data format for the active trace (source trace) and store it into the Fmt variable.
- Lines 340 to 350 These lines display the echo window in the lower part of the LCD screen.
- Lines 360 to 470 The lines display, in the echo window, each point along with one measured value (the odd part of the index is always 0) and a frequency if the Fmt is "MLOG", "PHAS", "GDEL", "MLIN", "SWR", "REAL", "IMAG", or "UPH"; or along with two measured values and a frequency if Fmt\$ returns any other string.
- Line 490 Makes active the specified trace (TrPut: target trace) in the specified channel(ActCh).
- Line 500 Writes the formatted data array (FmtData) into the active trace (target trace).

Procedure called when the user clicks the **Exit** button on the UserForm (lines 540 to 580)

- Line 560 Unloads the UserForm from the memory, and terminates the program.

Procedure that initializes the UserForm (lines 600 to 870)

- Lines 620 to 850 When the program is launched, these lines add each list item and set the default value for each list.

Example 4-3

Reading/displaying/writing a formatted data array (read_write.frm)

```

10| Private Sub cmdCopy_Click()
20|
30|     Dim X As Integer, Y As Integer, Z As Integer, I As Integer
40|     Dim ActCh As Long, TrGet As Long, TrPut As Long
50|     Dim TrCont As Long, Nop As Long
60|     Dim FmtData As Variant, Freq As Variant
70|     Dim Fmt As String
80|
90|     X = cboCh.ListIndex

```

Controlling the E5061A/E5062A Reading/Writing Measurement Data

```
100|     ActCh = X + 1
110|
120|     Y = cboGet.ListIndex
130|     TrGet = Y + 1
140|
150|     Z = cboPut.ListIndex
160|     TrPut = Z + 1
170|
180|     TrCont = SCPI.CALCulate(ActCh).PARameter.Count
190|     If TrCont < TrPut Then
200|         SCPI.CALCulate(ActCh).PARameter.Count = TrPut
210|     End If
220|
230|     SCPI.CALCulate(ActCh).PARameter(TrGet).SElect
240|     SCPI.INITiate(ActCh).CONTinuous = False
250|     SCPI.ABORT
260|     Nop = SCPI.SENSe(ActCh).SWEep.POINTs
270|
280|     FmtData = SCPI.CALCulate(ActCh).SElected.Data.FDATA
290|     Freq = SCPI.SENSe(ActCh).FREQuency.Data
300|
310|     '''Displays the formatted data
320|
330|     Fmt = SCPI.CALCulate(ActCh).SElected.Format
340|     SCPI.DISPlay.TABLe.TYPE = "ECHO"
350|     SCPI.DISPlay.TABLe.STATE = True
360|     Select Case Fmt
370|         Case "MLOG", "PHAS", "GDEL", "MLIN", "SWR", "REAL",
380|             "IMAG", "UPH"
390|                 ECHO "Nop", "Frequency(GHz)", "Data"
400|                 For I = 0 To Nop - 1
410|                     ECHO I + 1, Freq(I) / 1000000000#, FmtData(2 * I)
420|                 Next I
430|             Case Else
440|                 ECHO "Nop", "Frequency(GHz)", "Data1", "Data2"
450|                 For I = 0 To Nop - 1
460|                     ECHO I + 1, Freq(I) / 1000000000#, FmtData(2 * I),
470|                     FmtData(2 * I + 1)
480|                 Next I
490|             End Select
500|     SCPI.CALCulate(ActCh).PARameter(TrPut).SElect
510|     SCPI.CALCulate(ActCh).SElected.Data.FDATA = FmtData
520| End Sub
530|
540| Private Sub cmdExit_Click()
550|
560|     Unload Me
570|
580| End Sub
590|
600| Private Sub UserForm_Initialize()
610|

```

Executing a Procedure with a Softkey (User Menu Function)

The E5061A/E5062A lets you perform procedures assigned to specific softkeys (**[Macro Setup] - User Menu - Button 1/2/3/4/5/6/7/8/9/10**) without using user forms by an event that the softkey is pressed. This function is called the user menu function.

NOTE You do not have to execute any VBA program when using the user menu function.

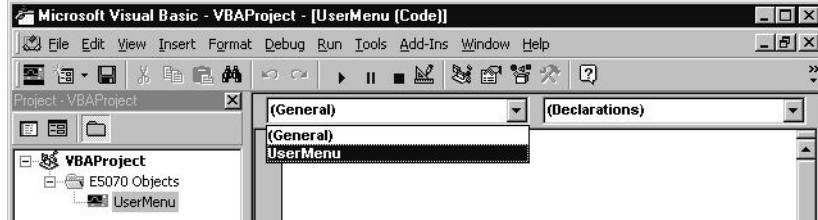

Preparation for Using the User Menu Function

Before using the user menu function, perform the following preparation.

Coding of a Procedure Assigned to a Softkey

Follow these steps to create a procedure assigned to a specific softkey in the “UserMenu” object in the “E5062 Objects” folder.

- Step 1.** Double-click the “UserMenu” icon in the “E5062 Objects” folder to open the code window.
- Step 2.** In the object box in the code window, click **UserMenu** as shown below.

- Step 3.** In the **UserMenu_OnPress(ByVal Key_id As Long)** on page 121 procedure, create a program you want to assign to a specific softkey (specify with the *id* variable). For actual use example, see Line 70 to 430 in the Example 4-5 on page 79.

NOTE During processing an event (during execution of a procedure for a key pressed), another event (an interrupt by a procedure for another softkey pressed) cannot be accepted.

NOTE You cannot save (export) the “UserMenu” object by module basis; save it by project basis.

Settings for Softkey Label and Softkey Enabled/Disabled

When you want to change the softkey labels for the user menu function, use the following COM object. For more information on this object, see Chapter 7, “COM Object Reference.”.

- `UserMenu.Item(Key_id).Caption` on page 119

When you want to set the softkey enabled/disabled for the user menu function, use the following COM object. For more information on this object, see Chapter 7, “COM Object Reference.”.

- `UserMenu.Item(Key_id).Enabled` on page 120

Moreover, when you want to preset the above settings for the user menu function, use the following COM object. For more information on this object, see Chapter 7, “COM Object Reference.”.

- `UserMenu.PRESet` on page 121

NOTE

The above user menu setting is also preset by pressing **[Macro Setup] - Preset User Menu** on the E5061A/E5062A front panel.

How to Use the User Menu Function

To execute a procedure assigned to a softkey, you need to generate an event of pressing the softkey. To generate an event, the manual method and the COM object method are available.

Method by Manual Operation

Step 1. Click the specific softkey as follows:

- **[Macro Setup] - User Menu - Button No.**

"**No.**" represents a button number. You can set the label for "**Button No.**" as you like. For detail, refer to the “Settings for Softkey Label and Softkey Enabled/Disabled.” section.

Method by COM Object

You can use the following COM object to perform the same operation as pressing a specific softkey. For more information on this object, see Chapter 7, “COM Object Reference.”.

- `UserMenu.Press(Key_id)` on page 122

Controlling the E5061A/E5062A
Executing a Procedure with a Softkey (User Menu Function)

Simple Example

The sample program disk contains a sample program, named “meas_user.vba“, that demonstrates how to use the user menu function. This VBA program consists of the following standard module and the “UserMenu” object.

Object name	Module type	Content
mdlUserMenu	Standard module	Sets the softkey labels and enables interrupts from the softkeys.

The program (object name: mdlUserMenu) is described in detail below:

- Line 70 Stores True into the State variable.
Lines 90 to 150 Sets the first to third softkey (*id*: 1 to 3) enabled, and sets the fourth to tenth softkey (*id*: 4 to 10) disabled.
Lines 170 to 190 Sets the first softkey label (*id*: 1) to “Setup” the second softkey label (*id*: 2) to “Meas” the third softkey label (*id*: 3) to “Exit”.
Line 210 Displays the buttons for the user menu function in the softkey area.
Lines 230 to 250 Processing repeated until the State variable is True (State = True).
Line 240: Detects an event that a specific softkey is pressed and enables the interrupt from the event.

Example 4-4

Sample program using user menu (object name: mdlUserMenu)

```
10| Public State As Boolean
20|
30| Sub Main()
40|
50|     Dim I As Long, J As Long
60|
70|     State = True
80|
90|     For I = 1 To 3
100|         UserMenu.Item(I).Enabled = True
110|     Next I
120|
130|     For J = 4 To 10
140|         UserMenu.Item(J).Enabled = False
150|     Next J
160|
170|     UserMenu.Item(1).Caption = "Setup"
180|     UserMenu.Item(2).Caption = "Meas"
190|     UserMenu.Item(3).Caption = "Exit"
200|
210|     UserMenu.Show
220|
230|     Do While State
240|         DoEvents
250|     Loop
260|
270| End Sub
```

Executing a Procedure with a Softkey (User Menu Function)

The procedures of the “UserMenu” object are described below.

Lines 70 to 190 The procedure when the first softkey (*id*: 1) is pressed.

Line 90: Returns the E5061A/E5062A to the preset state.

Lines 110 to 130 For channel 1, sets the sweep start value to 1.73 GHz, the sweep stop value to 1.83 GHz, and the number of measurement points to 51.

Lines 150 to 170 After aborting the measurement, sets the trigger source to the bus trigger and turns on the continuous trigger startup mode for channel 1.

Line 190: Displays the buttons for the user menu function in the softkey area.

Lines 210 to 320 The procedure when the second softkey (*id*: 2) is pressed.

Lines 230 to 240 Generates a trigger to start a single sweep and waits until the measurement finishes (1 is read out with the **SCPI.IEEE4882.OPC** object).

Line 260: Retrieves the number of points in channel 1 and stores that number into the Nop variable.

Lines 280 to 290 Specifies trace 1 of channel 1 to the active trace, retrieves the formatted data array, and stores the data into the FmtData variable.

Lines 310 to 320 Displays the echo window in the lower part of the LCD screen.

Lines 340 to 360: Displays 2 measurement data values (primary value and secondary value) for each measurement point in the echo window.

Lines 380 to 430 The procedure when the third softkey (*id*: 3) is pressed.

Line 400: Displays a program closing message.

Line 410: Stores False into the sta variable to terminate the main program.

Example 4-5**Sample program using user menu (“UserMenu” object)**

```

10| Private Sub UserMenu_OnPress(ByVal id As Long)
20|
30| Dim I As Integer
40| Dim Nop As Long, Dmy As Long
50| Dim FmtData As Variant
60|
70| If id = 1 Then
80|
90|     SCPI.SYSTEM.PRESet
100|
110|     SCPI.SENSE(1).FREQuency.START = 1730000000#
120|     SCPI.SENSE(1).FREQuency.STOP = 1830000000#
130|     SCPI.SENSE(1).SWEep.POInts = 51
140|
150|     SCPI.ABORT

```

Controlling the E5061A/E5062A

Executing a Procedure with a Softkey (User Menu Function)

```
160|      SCPI.TRIGger.SEQuence.Source = "BUS"

5

Controlling Peripherals

This chapter explains how to control peripherals connected to the E5061A/E5062A with GPIB by using the software (VISA library) installed in the E5061A/E5062A.

Overview

The E5061A/E5062A macro function (E5061A/E5062A VBA) can be used not only to automate measurements but also to control external measurement instruments connected via USB/GPIB interface cable by acting as a self-contained system controller (see “An Overview of a Control System Based on the Macro Function” on page 25).

The E5061A/E5062A macro function (E5061A/E5062A VBA) performs communications via the COM interface when controlling the E5061A/E5062A itself, but it communicates via VISA (Virtual Instrument Software Architecture) when controlling external measurement instruments.

To control peripherals connected to the E5061A/E5062A via USB/GPIB interface cable, the following preparation is required.

Preparation

Importing Definition Files

To use the VISA library in the E5061A/E5062A macro (E5061A/E5062A VBA), you need to import two definition files into your project with the Visual Basic editor to define the VISA functions and perform other tasks. The definition files are stored on the sample programs disk under the following filenames (for information on importing modules, refer to “Saving a Module (Exporting)” on page 43).

- visa32.bas
- vpptype.bas

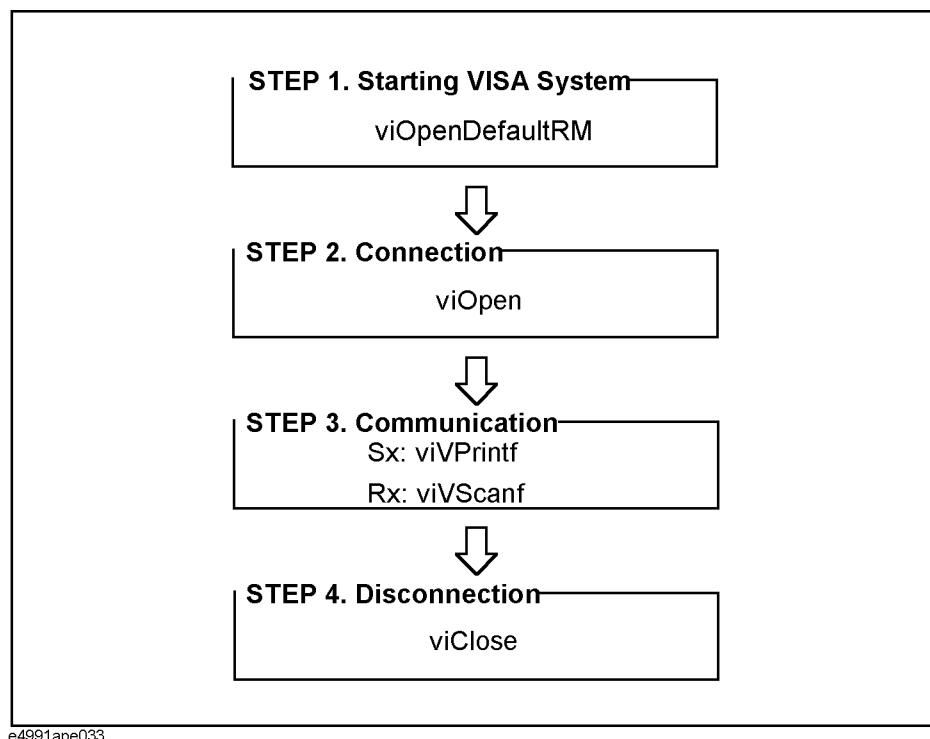

Programming with VISA

Figure 5-1 shows the flow of controlling the instrument with VISA. When developing a VISA program in the Visual Basic language, a special programming notice (in the readme text file listed below) must be reviewed.

For details on the use of the VISA library and the programming notice for using the VISA library with the E5061A/E5062A macro (E5061A/E5062A VBA), refer to the following files contained on the CD-ROM (Agilent part number: E5061-905xx).

- visa.hlp (on-line help for the VISA library)
- vbreadme.txt (notes on using the VISA library with VB)

Figure 5-1 Flow of instrument control with VISA

STEP 1. Starting Up VISA System

VISA's viOpenDefaultRM function initializes and starts up the VISA system. The viOpenDefaultRM function must be executed before other VISA functions are called, and the parameter of this function is startup information .

Syntax

viOpenDefaultRM(*param*)

Parameter

	(<i>param</i>)
Description	Startup information (output)
Data type	Long integer type

STEP 2. Connection

VISA's viOpen function makes connection with the specified instrument. The viOpen function returns a value so that the VISA functions can apply it to the specified instrument. The parameters of this function are startup information , the address information of the specified instrument , access mode , timeout , and connection information .

Syntax

viOpen(*param1*,*param2*,*param3*,*param4*,*param5*)

Parameters

	(<i>param1</i>)
Description	Startup information (input)
Data type	Long integer type

	(<i>param2</i>)
Description	Address information of the specified instrument (input)
Data type	Character string type
Syntax	GPIB[<i>board</i>] ^{*1} :: <i>primary address</i> ^{*2} ::INSTR

*1. GPIB0 for the E5061A/E5062A.

*2. The GPIB address of the instrument controlled by the E5061A/E5062A.

	(<i>param3</i>)
Description	Access mode (Enter 0)

	(<i>param4</i>)
Description	Timeout (Enter 0)

	<i>(param5)</i>
Description	Connection information (output)
Data type	Long integer type

STEP 3. Communication

VISA's viVPrintf function sends a program message (GPIB command) to the specified instrument. The parameters of this function are connection information , the program message , and the variable to be formatted .

NOTE

To input/output GPIB commands, the viVPrintf function and the viVScanf function are mainly used, but other VISA functions are also available. For more information, refer to visa.hlp (online help for the VISA library).

Syntax

viVPrintf(*param1,param2,param3*)

Parameters

	<i>(param1)</i>
Description	Connection information (input)
Data type	Long integer type

	<i>(param2)</i>
Description	Program message (input) ^{*1}
Data type	Character string type

*1. When sending a program message of the GPIB command, a message terminator is required at the end of the message .

	<i>(param3)</i>
Description	A variable to be formatted ^{*1}
Data type	Specified data type

*1. If not applicable, enter 0.

Controlling Peripherals Programming with VISA

VISA's viVScanf function receives the result from the specified instrument and stores it in the output variable. The parameters of this function are connection information , the format parameter for the output variable, and the output variable.

Syntax

viVScanf(*param1*,*param2*,*param3*)

Parameters

	<i>(param1)</i>
Description	Connection information (input)
Data type	Long integer type

	<i>(param2)</i>
Description	Format parameter for the output variable
Data type	Character string type

	<i>(param3)</i>
Description	Output variable (output)
Data type	Character string type

STEP 4. Disconnection

VISA's viClose function disconnects communication and terminates the VISA system. The parameter of this function is startup information.

Syntax

viClose(*param*)

Parameter

	<i>(param)</i>
Description	Startup information (input)
Data type	Long integer type

6

Application Programs

This chapter describes sample programs (VBA programs) based on actual measurement examples.

Basic measurement (measuring a band-pass filter)

Example 6-1 shows a sample program (VBA program) that demonstrates how to perform the basis measurement of the bandpass filter. You can find the source file of this program, named “apl_bsc.vba”, on the sample program disk. This VBA program consists of the following standard module.

Object name	Module type	Content
mdlBscMeas	Standard module	Performs the basic measurement of the bandpass filter.

Overview of the program

The sample program performs full 2-port calibration using the 85032F calibration kit, measure a band-pass filter (center frequency: 947.5 MHz), and calculates and displays its bandwidth, insertion loss, and so on. This measurement is the same as “Example of measuring a band-pass filter” in *Installation/Quick Start Guide* of the E5061A/E5062A. Therefore, for information on the flow of the measurement, the connection of the standard, and so on, refer to the description of *Installation/Quick Start Guide*.

Description of the program

When you run this VBA program, reset is performed, the measurement conditions are automatically set, and a message “Perform the full 2-port calibration.” is displayed. To perform the full 2-port calibration, click the **Yes** button; to skip it, click the **No** button.

To perform the calibration, follow the onscreen messages to connect each standard of the Agilent 85032F calibration kit to the specified port, and click the **OK** button to measure the calibration data. Click the **Cancel** button to return to the beginning of the calibration. You cannot skip the isolation calibration. When the calibration data measurement for all standards is complete, a message “All calibration data completion.” is displayed, and the calibration coefficient is calculated.

NOTE

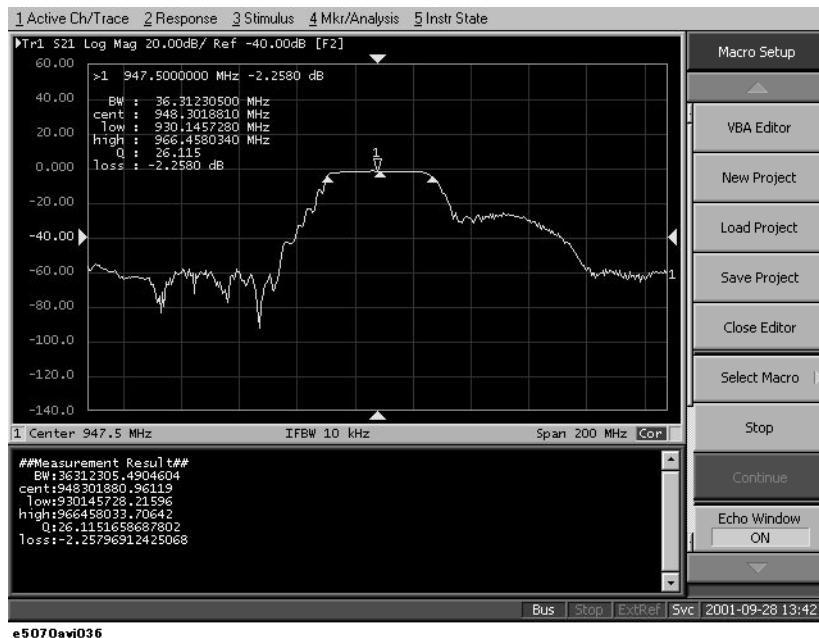

When you cancel the calibration data measurement before completing the measurement of necessary calibration data, the settings condition may not be returned to its former state.

Then, a message “Connect DUT, and then press [Macro Setup]-Continue button.” is displayed in the instrument status bar in the lower part of the LCD display. Connect a DUT, and perform **[Macro Setup] - Continue**. After the measurement, the search result is displayed in the echo window, as shown in Figure 6-1. If no bandwidth search target is found, only the result of the insertion loss obtained with the marker is displayed.

Basic measurement (measuring a band-pass filter)

Figure 6-1

Example of the display after executing the program in Example 6-1

The basic measurement program (object name: mdlBscMeas) is described in detail below. Line numbers are added for description purpose only, and do not appear in the actual program source code.

- Lines 120 to 160 Store the sweep center value (947.5 MHz), the sweep span value (200 MHz), the number of measurement points (401), the IF bandwidth (10 kHz), the power level (-10 dBm) into the variables Center, Span, Nop, IfBw, and Pow, respectively.
- Lines 170 to 210 Stores the number of traces (1), the measurement parameter (S21), the data format (log amplitude), the calibration kit number (4: 85032F), and the save file name (State08.sta) into the variables, NumTrac, Par, Fmt, CalKit, and File, respectively.
- Line 250 Returns the E5061A/E5062A to the preset state.
- Lines 290 to 300 For channel 1, turns on the continuous trigger startup mode to on and sets the trigger source to the bus trigger.
- Lines 320 to 360 For channel 1, sets the sweep center value to the Center variable, the sweep span value to the Span variable, the number of measurement points to the Nop variable, the IF bandwidth to the IfBw variable, and the power level to the Pow variable.
- Lines 380 to 410 For channel 1, sets the number of traces to the NumTrac variable, the measurement parameter to the Par variable, and the data format to the Fmt variable, respectively.
- Line 450 Stores the calibration kit number for channel 1 to the CalKit variable.
- Line 460 Stores 1 and 2 to the Port variable that indicates ports used for the full 2-port calibration.
- Line 480 Calls the Calib_Solt procedure (lines 1200 to 2130). For information on the Calib_Solt procedure, see the description later.

Application Programs

Basic measurement (measuring a band-pass filter)

- Lines 520 to 530 Saves the instrument setting and the calibration coefficient into a file whose name is specified with the File variable.
- Line 580 Displays a message that prompts you to connect a DUT (Device Under Test) in the instrument status bar in the lower part of the LCD display, and waits for the operation of **[Macro Setup] - Continue** after the connection.
- Lines 620 to 630 Generates a trigger to start a single sweep and waits until the measurement finishes (1 is read out with the **SCPI.IEEE4882.OPC** object).
- Line 650 For trace 1 of channel 1, executes the auto scale to set the optimum scale.
- Lines 690 to 710 Displays marker 1, and moves it so that the stimulus value becomes equal to the value of the Center variable. Then, reads out the response value of marker 1 and stores it into the MkrVal variable.
- Line 730 Enables the error handling routine starting from Bw_Err (lines 890 to 950). If a runtime error occurs, the program goes to the error handling routine.
- Lines 750 to 770 Sets the bandwidth definition value to -3 dB and the bandwidth search result display to on, reads out the bandwidth search result (bandwidth, center frequency, Q value, and insertion loss), and stores it into the BwData variable.
- Lines 790 to 840 Based on the bandwidth search result, stores the bandwidth to the Bw variable, the center frequency to the Cent variable, the Q value to the Qfac variable, and the insertion loss to the Loss variable, respectively. Then, goes to the processing starting from Skip_Bw_Err.
- Lines 880 to 960 Defines a runtime error handler. Reads out and displays the error number and error message of the error that occurred, and stores 0 to the Bw, Cent, and Qfac variables and the response value of marker 1 (the MkrVal(0) variable) to the Loss variable. Then, finishes the error handling and proceeds to the next processing.
- Lines 1000 to 1010 Calculates the 2 (higher and lower) cutoff frequencies from the values in the Bw and Cent variables and stores them into the CutLow and CutHigh variables.
- Lines 1030 to 1110 Displays the search result (the values of the Bw, Cent, CutLow, CutHigh, Qfac, and Loss variables) in the echo window.
- Lines 1130 to 1160 Displays the message asking you whether you want to perform measurement again. Click the **Yes** button to return to the DUT connection section. Click the **No** button to terminate the program.
- Procedure: Calib_Solt (lines 1200 to 2130).
- Lines 1260 to 1300 Displays the message that prompts for the execution of the full n-port calibration (specified with the SoltType variable). Click the **Cancel** button to cancel the calibration.
- Lines 1320 to 1410 Sets the calibration type to the full n-port calibration for the port specified with the Port variable.
- Lines 1450 to 1520 Displays the message that prompts for connecting the open standard to the specified port. Starts the measurement of the open calibration data

Basic measurement (measuring a band-pass filter)

initiated by clicking the **OK** button after the connection and waits for the completion of the measurement. Click the **Cancel** button to return to the beginning of the calibration.

Lines 1540 to 1610 Displays the message that prompts for connecting the short standard to the specified port. Starts the measurement of the short calibration data initiated by clicking the **OK** button after the connection and waits for the completion of the measurement. Click the **Cancel** button to return to the beginning of the calibration.

Lines 1630 to 1700 Displays the message that prompts for connecting the load standard to the specified port. Starts the measurement of the load calibration data initiated by clicking the **OK** button after the connection and waits for the completion of the measurement. Click the **Cancel** button to return to the beginning of the calibration.

Lines 1750 to 1840 Displays the message that prompts for connecting the thru standard between the specified ports. Starts the measurement of the thru calibration data initiated by clicking the **OK** button after the connection and waits for the completion of the measurement. Click the **Cancel** button to return to the beginning of the calibration.

Lines 1880 to 2060 When the calibration type is not the full 1-port calibration (a value other than 1 is specified for the SoltType variable), displays the message asking you whether you want to measure the isolation calibration data. When the **Yes** button is clicked, displays the message that prompts for connecting the load standard to the specified 2 ports (specified with the Port(I-1) and Port(J-1) variables). Starts the measurement of the isolation calibration data initiated by clicking the **OK** button after the connection and waits for the completion of the measurement. Click the **Cancel** button to return to the beginning of the calibration.

Lines 2080 to 2090 Calculates the calibration coefficients from the measured calibration data and turns on the error correction function. Then, displays a calibration completion message.

Connecting Hard Disk (Shared Folder) of External PC

Example 6-2 shows a sample program (VBA program) that demonstrates how to connect a hard disk (a shared folder) of an external PC to the E5061A/E5062A. You can find the source file of this program, named “map_drive.vba”, on the sample program disk. This VBA program consists of the following modules:

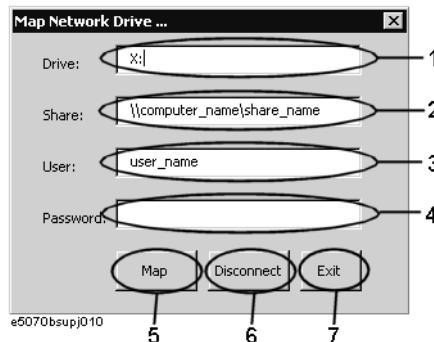

Object name	Module type	Description
frmMapDrive	User form	Connects or disconnects a hard disk.
Module1	Standard module	Displays frmMapDrive.

Using VBA program

Step 1. Load the map_drive.vba and press [Macro Run]. The following macro appears.

Figure 6-2

Shared folder connection macro

Step 2. Connecting (Mapping)

Enter the drive letter for the shared folder (1 in Figure 6-2), the share name of the shared folder (2 in Figure 6-2), the user name (3 in Figure 6-2) and the password (4 in Figure 6-2) in the external PC. And then click the **Map** button (5 in Figure 6-2).

NOTE

Consult your network administrator and enter the settings in the same way as the Windows 2000® PC. If you enter an incorrect setting, an error occurs and the program is interrupted.

Disconnecting

Enter the drive letter for the shared folder (1 in Figure 6-2), and then click the **Disconnect** button (6 in Figure 6-2).

Step 3. Click the **Exit** button (7 in Figure 6-2) to exit from the program.

Description of operation in VBA program

The program (object name: frmMapDrive) is described in detail below:

Sub CommandButton1_Click

This procedure is called when the user clicks the **Map** button. This procedure checks if the drive letter is used using the IsDriveNameInUse procedure. And then this procedure connects the shared folder using the MapDrive procedure if the drive letter is not used, or displays a message to show the drive letter is used if the drive letter is used.

Sub CommandButton2_Click

This procedure is called when the user clicks the **Disconnect** button. This procedure disconnects the shared folder using the DisconnectDrive procedure.

Function IsDriveNameInUse

This procedure checks if the txtDrive.Text (the drive letter specified by 1 in Figure 6-2) is used.

Sub MapDrive

This procedure connects the shared folder as the txtDrive.Text (the drive letter specified by 1 in Figure 6-2) drive using the parameters: txtShare.Text (the share name specified by 2 in Figure 6-2), txtUser.Text (the user name specified by 3 in Figure 6-2), and txtPasswd.Text (the password specified by 4 in Figure 6-2).

Sub DisconnectDrive

This procedure disconnects the txtDrive.Text (the drive letter specified by 1 in Figure 6-2) drive.

Sub CommandButton3_Click

This procedure is called when the user clicks the **Exit** button. This procedure ends the program.

Application Programs
Connecting Hard Disk (Shared Folder) of External PC

Example 6-2

Connecting a hard disk of external PC (Object name: frmMapDrive)

```
Private Sub CommandButton1_Click()
    If Not IsDriveNameInUse Then
        Call MapDrive
    Else
        MsgBox "Drive "" & txtDrive.Text & "" is Already used", vb
Critical
        End If
    End Sub

Private Sub CommandButton2_Click()
    Call DisconnectDrive
End Sub

Private Function IsDriveNameInUse() As Boolean
    Set fso = CreateObject("Scripting.FileSystemObject")
    IsDriveNameInUse = fso.DriveExists(txtDrive.Text)
End Function

Private Sub MapDrive()
    Set network = CreateObject("wscript.network")
    Call network.MapNetworkDrive(txtDrive.Text, txtShare.Text, vbFal
se, txtUser.Text, txtPasswd.Text)
    End Sub

Private Sub DisconnectDrive()
    Set network = CreateObject("wscript.network")
    network.RemoveNetworkDrive txtDrive.Text
End Sub

Private Sub CommandButton3_Click()
    Unload Me
End Sub
```

COM Object Reference

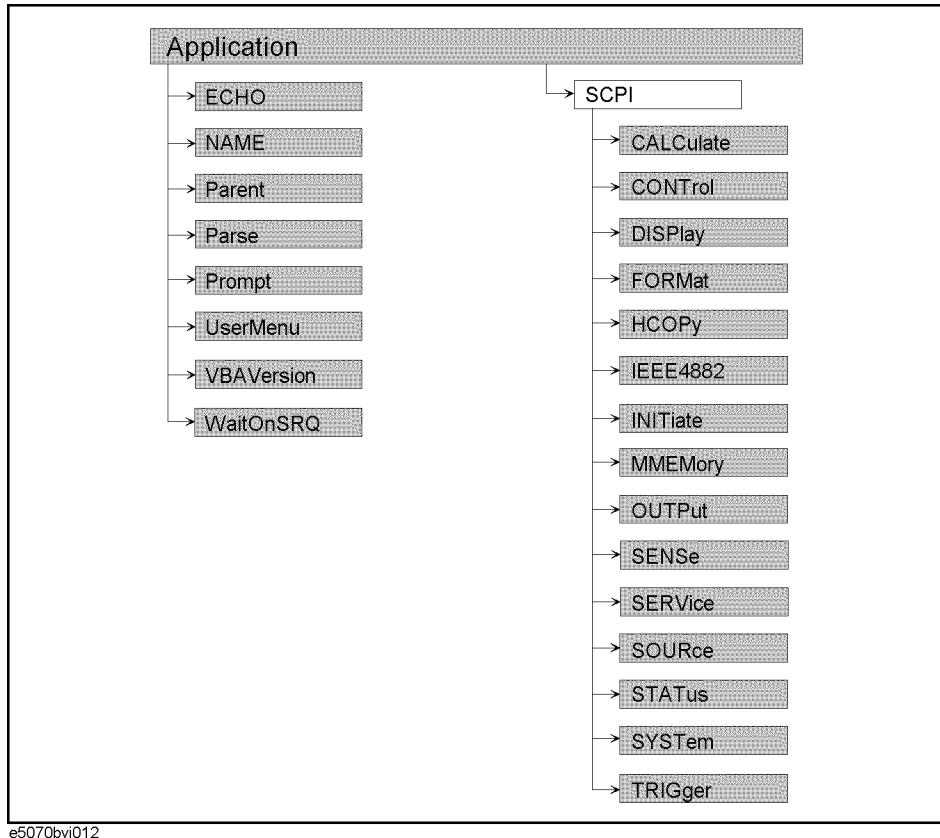

This chapter describes the COM object model of the Agilent E5061A/E5062A and the COM object reference in alphabetical order. If you want to look up COM objects by corresponding front panel keys, see “COM object list by front panel key.”

COM Object Model

The COM objects provided for the E5061A/E5062A are structured hierarchically as shown in Figure 7-1.

Figure 7-1

E5061A/E5062A COM object model

Application Objects

The Application objects are at the top of the hierarchy of the E5061A/E5062A COM object model. They consist of 7 objects dedicated to the COM interface and SCPI objects corresponding to SCPI commands. For information on the basic use of the 7 objects dedicated to the COM interface, see “Application Objects” on page 100.

SCPI Objects

The SCPI objects are created to realize the SCPI commands of the E5061A/E5062A with the COM interface. For information on the basic use of the SCPI objects, see “SCPI Objects” on page 101.

The conversion rules from the SCPI commands when writing SCPI object messages are as follows:

- SCPI must be at the beginning. Notice that the IEEE common commands start with SCPI.IEEE4882, and "*" is omitted.
- Replace colons (:) used as the hierarchical separator symbol with dots (.)
- The number written in the object message is specified with ().
- You cannot omit the command message in the syntax.

SCPI command	COM object
OUTPUT 717;":SOUR1:POW -10"	→ SCPI.SOURce(1).POWER.LEVel.IMMEDIATEAMPLitude = -10
OUTPUT 717;":SENS1:CORR:COLL:METH:TYPE?" ENTER 717;A\$	→ A = SCPI.SENSE(1).CORRection.COLlect.METHOD:TYPE
OUTPUT 717;"*CLS"	→ SCPI.IEEE4882.CLS

COM Object List

Notational Rules of COM Objects

This section describes the rules for the description of the COM objects in this chapter.

Object Type

Part with heading “Object type” describes the type of the E5061A/E5062A COM object. The E5061A/E5062A provides properties and methods as the types of COM objects. In the E5061A/E5062A COM objects, COM objects to set (send)/read (return) the state of the E5061A/E5062A using variables are defined as property and ones to prompt some kind of processing as method.

Syntax

Part with heading “Syntax” describes the syntax to send a COM object from the E5061A/E5062A VBA to the E5061A/E5062A. The syntax consists of the object part and the set/read part, with an equal “=” inserted between them. Variables are indicated by italicized letters. Variables with () are indices. For indices with () having their preset values, you can omit “(*variable*),” and, if omitted, the preset values are automatically set.

There are the following 3 types of syntax for coding using objects.

"Object (property) = *variable*": to set the stat of the E5061A/E5062A.

variable=object (property): to read the stat of the E5061A/E5062A.

"Object (method)": to make the E5061A/E5062A perform some processing.

Description

Part with heading “Description” describes how to use the COM object or the operation when executed. COM objects used only to read the state of the E5061A/E5062A are indicated with “Read only” and ones used only to set the state of the E5061A/E5062A “No read.”

Variable

Part with heading “Variable” describes necessary variables when using the object. It gives the description, data type, allowable range, preset value, unit, resolution, and notes for *variable* (*italic*) shown in the syntax.

Variables declared as the string data type (String) are case insensitive. For variables of the string type that indicate arguments (written as *Param* in the syntax), you can omit lower-case letters.

The data types of the E5061A/E5062A COM objects include 5 types as shown in Table 7-2. Before using variables, declare the data type of each variable. If you do not declare the data type of a variable, it is automatically dealt as the variant type.

Table 7-2 Data type

Data type	Name	Consumed memory	Range
Long	Long integer type	4 bytes	-2,147,483,648 to 2,147,483,647
Double	Double precision floating point type	8 bytes	For a negative value: -1.79769313486232E+308 to -4.94065645841247E-324 For a positive value: -1.79769313486232E+308 to -4.94065645841247E-324
Boolean	Boolean type	2 bytes	-1 (True) or 0 (False)
String	Character string type *1	1 byte/alphanumeric character	Up to approximately 2 billion characters
Variant	Variant type	16 bytes	No limitation

*1. For a fixed length string, declare the number of characters.

Examples

Part with heading “Examples” describes a simple example of how to use the object for coding with E5061A/E5062A VBA.

Related Objects

Part with heading “Related objects” describes related objects when using the object.

Equivalent Key

Part with heading “Equivalent key” shows the operational procedure of the front panel keys that has the same effect as this object.

- | | |
|---------------------|---|
| [Key] | Indicates that you press the key named Key. |
| [Key] - Item | Indicates a series of key operation in which you press the [Key] key, move the focus to the button called Item on the displayed menu using the [←→] key and so on, and then press the [Enter] key. |

Application Objects

The Application objects are at the top of the hierarchy of the E5061A/E5062A COM object model. They consist of 7 objects dedicated to the E5061A/E5062A COM interface and SCPI objects corresponding to SCPI commands. This section describes the objects dedicated to the E5061A/E5062A COM interface.

ECHO

Object type	Method						
Syntax	<p>ECHO <i>V1,V2,..,V10</i></p> <p>ECHO <i>SCPI object</i></p>						
Description	<p>Provides display in the echo window. (No read)</p> <p>There is the following difference from the display with the SCPI.DISPlay.ECHO.DATA object.</p> <ul style="list-style-type: none">• Up to 10 data items can be displayed.• Data is displayed as the declared data type without a cast.						
	<table border="1"><tr><td></td><td><i>V1,V2,..,V10</i></td></tr><tr><td>Description</td><td>Data you want to display in the echo window.</td></tr><tr><td>Data type</td><td>Variant type (Variant)</td></tr></table>		<i>V1,V2,..,V10</i>	Description	Data you want to display in the echo window.	Data type	Variant type (Variant)
	<i>V1,V2,..,V10</i>						
Description	Data you want to display in the echo window.						
Data type	Variant type (Variant)						
Examples	<pre>Dim Nop As Long Dim i As Integer Dim Fdata As Variant Nop = SCPI.SENSE(1).SWEEP.POINTS Fdata = SCPI.CALCULATE(1).SELECTED.DATA.FDATA ECHO "Test Results" For i=1 to Nop ECHO i, Fdata(2*i-2), Fdata(2*i-1) Next i ECHO SCPI.SYSTEM.ERROR</pre>						
Related objects	SCPI.DISPlay.ECHO.DATA on page 240						
Equivalent key	No equivalent key is available on the front panel.						

NAME

Object type Property

Syntax *App* = NAME

Description Reads out the application name of VBA. “E5061A” or “E5062A” is always read out. (Read only)

Variable

	<i>App</i>
Description	Application name
Data type	Character string type (String)

Examples

```
Dim Inst As String
Inst = NAME
ECHO Inst
```

Equivalent key No equivalent key is available on the front panel.

Parse

Object type

Method

Syntax

`Parse(Scpi)`

`Return = Parse(Scpi?)`

Description

Executes an SCPI command of the E5061A/E5062A. For information on the SCPI commands, see Chapter “SCPI Command Reference” in the *E5061A/E5062A Programmer’s Guide*.

The **Parse** object is a little slower in the execution speed than the COM object which has the same function as the SCPI command because it must parse the message string of the SCPI command.

Variable

	<i>Scpi</i>
Description	SCPI command
Data type	Character string type (String)

	<i>Return</i>
Description	Response (query) of the SCPI command
Data type	Character string type (String)

Examples

```
Dim Start As String
Parse(":SENS1:FREQ:STAR 100E6")
Start = Parse(":SENS1:FREQ:STAR?")
```

```
Dim TtlLbl As String
Parse(":DISP:WIND1:TITL:DATA ""filter""")
TtlLbl = Parse(":DISP:WIND1:TITL:DATA?")
```

```
Dim Fmt As String
Parse(":CALC1:PAR2:SEL")
Parse(":CALC1:FORM SMIT")
Fmt = Parse(":CALC1:FORM?")
```

```
Dim BckLght As String
Parse(":SYST:BACK OFF")
BckLght = Parse(":SYST:BACK?")
```

Equivalent key

No equivalent key is available on the front panel.

Prompt

Object type	Method
Syntax	<code>Prompt(<i>Mes</i>)</code>
Description	Displays the message you specify on the instrument status bar (at the bottom of the LCD display) and suspends the program until the [Macro Setup] - Continue button is pressed. (No read)

NOTE

When using this object, execute the program with the Visual Basic closed since you need to press the **[Macro Setup] - Continue**. For more information, see “Running a Program from the E5061A/E5062A Measurement Screen” on page 50. If you need to abort the program, see “Stopping with the Dialog Box Appeared” on page 51.

Variable

	<i>Mes</i>
Description	Message
Data type	Character string type (String)

Examples `Prompt("Connect DUT, and then press [Continue]")`

Equivalent key No equivalent key is available on the front panel.

UserMenu.Item(*Key_id*).Caption

Object type

Property

Syntax

UserMenu.Item(*Key_id*).Caption = *Lbl*

Lbl = UserMenu.Item(*Key_id*).Caption

Description

Sets the label name of the user menu function softkeys 1 to 10 (*Key_id*).

Variable

Table 7-3

Variable (*Key_id*)

	<i>Key_id</i>
Description	Softkey number for the user menu function
Data type	Long integer type (Long)
Range	1 to 10
Note	You cannot omit this because it does not have a preset value. If the specified variable is out of the valid setting range, an error occurs when executed.

	<i>Lbl</i>
Description	Softkey label name for the user menu function
Data type	Character string type (String)
Preset value	Varies depending on the specified softkey number.

Examples

```
Dim KeyLbl As String
UserMenu.Item(1).Caption = "Meas"
KeyLbl = UserMenu.Item(1).Caption
```

Equivalent key

No equivalent key is available on the front panel.

UserMenu.Item(*Key_id*).Enabled

Object type

Property

Syntax

UserMenu.Item(*Key_id*).Enabled = *Status*

Status = UserMenu.Item(*Key_id*).Enabled

Description

Makes the user menu function softkeys 1 to 10 (*Key_id*) enabled/disabled. The softkey label enabled is displayed with the grey color and its softkey cannot be pressed.

Variable

	<i>Status</i>
Description	Enabled/disabled for the user menu function softkey
Data type	Boolean type (Boolean)
Range	Select from the following. •True or -1 Makes the softkey enabled. •False or 0 Makes the softkey enabled.
Preset value	True or -1

For information on the variable (*Key_id*), see Table 7-3, “Variable (*Key_id*),” on page 119.

Examples

```
Dim KeyEna As Boolean
UserMenu.Item(10).Enabled = False
KeyEna = UserMenu.Item(10).Enabled
```

Related objects

UserMenu.Press(*Key_id*) on page 122

Equivalent key

No equivalent key is available on the front panel.

UserMenu_OnPress(ByVal *Key_id* As Long)

Object type	Event
Description	Executes the processing when one of the user menu function softkeys 1 to 10 (<i>Key_id</i>) is pressed. Write the processing in the “UserMenu” object. For more information on its use, see “Executing a Procedure with a Softkey (User Menu Function)” on page 76.
Variable	For information on the variable (<i>Key_id</i>), see Table 7-3, “Variable (Key_id),” on page 119.
Examples	<pre>Private Sub UserMenu_OnPress(ByVal id As Long) If id = 1 Then MsgBox "Button 1 was pressed." ElseIf id = 10 Then MsgBox "Button 10 was pressed." End If End Sub</pre>
Equivalent key	No equivalent key is available on the front panel.

UserMenu.PRESet

Object type	Method
Syntax	UserMenu.PRESet
Description	Presets the label name and enabled/disabled settings for the user menu softkeys. (No read)
Examples	UserMenu.PRESet
Related objects	UserMenu.Item(<i>Key_id</i>).Caption on page 119 UserMenu.Item(<i>Key_id</i>).Enabled on page 120
Equivalent key	[Macro Setup] - Preset User Menu

COM Object Reference
UserMenu.Press(Key_id)

UserMenu.Press(*Key_id*)

Object type	Method
Syntax	UserMenu.Press(<i>Key_id</i>)
Description	Presses one of the user menu function softkeys 1 to 10 (<i>id</i>). (No read)
Variable	For information on the variable (<i>Key_id</i>), see Table 7-3, “Variable (Key_id),” on page 119.
Examples	UserMenu.Press(1)
Related objects	UserMenu.Item(<i>Key_id</i>).Enabled on page 120
Equivalent key	[Macro Setup] - User Menu - Button 1 Button 2 Button 3 Button 4 Button 5 Button 6 Button 7 Button 8 Button 9 Button 10

UserMenu.Show

Object type	Method
Syntax	UserMenu.Show
Description	Displays the user menu function softkeys in the softkey area. (No read)
Examples	UserMenu.Show
Equivalent key	[Macro Setup] - User Menu

VBAVersion

Object type

Property

Syntax

Vers = VBAVersion

Description

Reads out the version information of VBA installed in the E5061A/E5062A. (Read only)

Variable

	<i>Vers</i>
Description	VBA version information
Data type	Character string type (String)

Examples

```
Dim Version As String  
Version = VBAVersion  
ECHO Version
```

Equivalent key

From the **Help** menu of the Visual Basic editor, click **About Microsoft Visual Basic....**

WaitOnSRQ

Object type**Method****Syntax***WaitOnSRQ Status, Timeout***Description**

Suspends the program for specified time until the RQS/MSS bit (bit 6) of the status byte register changes to 1. For information on the structure of the status register, see Appendix “Status Reporting System” in the *E5061A/E5062A Programmer’s Guide*. (No read)

Variable

	<i>Status</i>
Description	State of the RQS/MSS bit (read only)
Data type	Boolean type (Boolean)
Range	One of the following is returned. •True or -1 1 has been received within the specified time. •False or 0 1 has not been received within the specified time due to timeout or abort.

	<i>Timeout</i>
Description	Timeout time
Data type	Long integer type (Long)
Range	0 to 2,147,483,647
Preset value	-1 (infinity)
Unit	ms (millisecond)
Note	If the specified variable is out of the allowable setup range, the minimum value (if the lower limit of the range is not reached) or the maximum value (if the upper limit of the range is exceeded) is set.

Examples

```

Dim Stat As Boolean
SCPI.IEEE4882.CLS
SCPI.STATus.OPERation.PTRansition = 0
SCPI.STATus.OPERation.NTRansition = 16
SCPI.STATus.OPERation.ENABle = 16
SCPI.IEEE4882.SRE = 128
SCPI.TRIGger.SEQuence.SOURce = "bus"
SCPI.INITiate(1).CONTinuous = True
SCPI.TRIGger.SEQuence.IMMEDIATE
WaitOnSRQ Stat, 10000
If Stat = True Then
  MsgBox "Done"
End If

```

Equivalent key

No equivalent key is available on the front panel.

SCPI Objects

SCPI objects are a collection of the COM interface having one-on-one correspondence with the SCPI commands. This section describes the SCPI objects provided for the E5061A/E5062A.

SCPI.ABORT

Object type	Method
Syntax	<code>SCPI.ABORT</code>
Description	<p>Aborts the measurement and changes the trigger sequence for all channels to idle state.</p> <p>The channels for which the continuous startup mode is set to ON (setting to start up the trigger system continuously) change into the startup state immediately after the change to the idle state.</p> <p>For details about the trigger system, see Section “Trigger System” in the <i>E5061A/E5062A Programmer’s Guide</i>. (No read)</p>
Examples	<code>SCPI.ABORT</code>
Related objects	<code>SCPI.INITiate(Ch).IMMEDIATE</code> on page 281 <code>SCPI.INITiate(Ch).CONTinuous</code> on page 280
Equivalent key	[Trigger] - Restart

SCPI.CALCulate(*Ch*).PARameter.COUNT

SCPI.CALCulate(*Ch*).PARameter.COUNT

Object type	Property
Syntax	SCPI.CALCulate(<i>Ch</i>).PARameter.COUNT = <i>Value</i> <i>Value</i> = SCPI.CALCulate(<i>Ch</i>).PARameter.COUNT
Description	Sets the number of traces of channels 1 to 4 (<i>Ch</i>).

Variable

Table 7-4 Variable (*Ch*)

	<i>Ch</i>
Description	Channel number
Data type	Long integer type (Long)
Range	1 to 4
Preset value	1
Note	If the specified variable is out of the allowable setup range, an error occurs when executed.

	<i>Value</i>
Description	Number of traces
Data type	Long integer type (Long)
Range	1 to 4
Preset value	1
Note	If the specified variable is out of the allowable setup range, the minimum value (if the lower limit of the range is not reached) or the maximum value (if the upper limit of the range is exceeded) is set.

Examples

```
Dim TraceNum As Long
SCPI.CALCulate(1).PARameter.COUNT = 4
TraceNum = SCPI.CALCulate(1).PARameter.COUNT
```

Equivalent key **[Display] - Num of Traces**

SCPI.CALCulate(*Ch*).PARameter(*Tr*).DEFine

Object type

Property

Syntax

SCPI.CALCulate(*Ch*).PARameter(*Tr*).DEFine = *Param**Param* = SCPI.CALCulate(*Ch*).PARameter(*Tr*).DEFine

Description

For channels 1 to 4 (*Ch*), sets the measurement parameter of traces 1 to 4 (*Tr*).

Variable

	<i>Param</i>
Description	Measurement parameter
Data type	Character string type (String)
Range	Select from the following. •"S11" Specifies S11. •"S21" Specifies S21. •"S12" Specifies S12. •"S22" Specifies S22.
Preset value	"S11"

For information on the variable (*Ch*) and the variable (*Tr*), see Table 7-4, “Variable (Ch),” on page 126 and Table 7-5, “Variable (Tr),” on page 128, respectively.

Examples

```
Dim MeasPara As String
SCPI.CALCulate(1).PARameter(1).DEFine = "s21"
MeasPara = SCPI.CALCulate(1).PARameter(1).DEFine
```

Equivalent key

[Meas] - S11|S21|S12|S22

Object type

Property

Syntax

SCPI.CALCulate(*Ch*).SESelected.BLIMit.DB = *Value**Value* = SCPI.CALCulate(*Ch*).SESelected.BLIMit.DB

Description

For channel 1 to channel 4 (specified with the SCPI.CALCulate(*Ch*).PARameter(*Tr*).SELect command), sets the bandwidth threshold value (attenuation from the peak) of the bandwidth test.

Variable

	<i>Value</i>
Description	Bandwidth N dB points.
Data type	Double precision floating point type (Double)
Range	0 to 5E8
Preset value	3
Unit	dB

For information on the variable (*Ch*), see Table 7-4, “Variable (Ch),” on page 126.

Examples

```
Dim BLimDB As Double
SCPI.CALCulate(1).SESelected.BLIMit.DB = 3
BLimDB = SCPI.CALCulate(1).SESelected.BLIMit.DB
```

Object type

Property

Syntax

SCPI.CALCulate(*Ch*).SELected.BLIMit.DISPlay.MARKer = *Status*

Status = SCPI.CALCulate(*Ch*).SELected.BLIMit.DISPlay.MARKer

Description

For the active trace of channel 1 to channel 4 (specified with the SCPI.CALCulate(*Ch*).PARameter(*Tr*).SElect command), turns ON/OFF the marker display of the bandwidth test.

Variable

	<i>Status</i>
Description	ON/OFF of the bandwidth marker.
Data type	Boolean type (Boolean)
Range	Select from the following. •True or -1 Turns ON the bandwidth marker. •False or 0 Turns OFF the bandwidth marker.
Preset value	False or 0

For information on the variable (*Ch*), see Table 7-4, “Variable (*Ch*),” on page 126.

Examples

```
Dim BLimMk As Boolean
SCPI.CALCulate(1).PARameter(1).SElect
SCPI.CALCulate(1).SELected.BLIMit.DISPlay.MARKer = True
BLimMk = SCPI.CALCulate(1).SELected.BLIMit.DISPlay.MARKer

SCPI.CALCulate(*Ch*).SELected.BLIMit.FAIL

Object type

Property

Syntax

Status = SCPI.CALCulate(*Ch*).SELected.BLIMit.FAIL

Description

For the active trace of channel 1 to channel 4 (specified with the SCPI.CALCulate(*Ch*).PARameter(*Tr*).SELect command), reads out the bandwidth limit test result. (Read only)

Variable

	<i>Status</i>
Description	The bandwidth limit test result
Data type	Boolean type (Boolean)
Range	Select from the following. •True or -1 Turns ON the bandwidth limit test result is FAIL. •False or 0 Turns OFF the bandwidth limit test result is PASS.
Note	When the bandwidth limit test if set to OFF, False or 0 is always read out.

For information on the variable (*Ch*), see Table 7-4, “Variable (*Ch*),” on page 126.

Examples

```
Dim Result As Boolean
SCPI.CALCulate(1).PARameter(1).SELect
SCPI.CALCulate(1).SELected.BLIMit.STATE = True
Result = SCPI.CALCulate(1).SELected.BLIMit.FAIL

SCPI.CALCulate(Ch).SELected.FUNCtion.DATA

SCPI.CALCulate(Ch).SELected.FUNCtion.DATA

Object type

Property

Syntax

Data = SCPI.CALCulate(*Ch*).SELected.FUNCtion.DATA

Description

For the active trace of channels 1 to 4 (*Ch*), reads out the analysis result of the SCPI.CALCulate(*Ch*).SELected.FUNCtion.EXECute object. (Read only)

Variable

	<i>Data</i>
Description	<p>Indicates the array data (analysis result) of N (number of data pairs)\times2. N (number of data pairs) can be read out with the SCPI.CALCulate(<i>Ch</i>).SELected.FUNCtion.POINTs object. Where n is an integer between 1 and N.</p> <ul style="list-style-type: none">• <i>Data(n\times2-2)</i> Response value or analysis result of the searched n-th measurement point.• <i>Data(n\times2-1)</i> Stimulus value of the searched n-th measurement point. Always 0 for the analysis of the mean value^{*1}, the standard deviation^{*1}, and the difference between the maximum value and the minimum value^{*1}. <p>The index of the array starts from 0.</p>
Data type	Variant type (Variant)

*1. To specify the type of the analysis, use the SCPI.CALCulate(*Ch*).SELected.FUNCtion.TYPE object.

For information on the variable (*Ch*), see Table 7-4, “Variable (*Ch*),” on page 126.

Examples

```
Dim AnaData As Variant
SCPI.CALCulate(1).PARameter(1).SElect
SCPI.CALCulate(1).SELected.FUNCTION.TYPE = "mean"
SCPI.CALCulate(1).SELected.FUNCTION.EXECute
AnaData = SCPI.CALCulate(1).SELected.FUNCtion.DATA

SCPI.CALCulate(*Ch*).SESelected.FUNCtion.DOMain.COUPLE

Object type

Property

Syntax

SCPI.CALCulate(*Ch*).SESelected.FUNCtion.DOMain.COUPLE = *Status*

Status = SCPI.CALCulate(*Ch*).SESelected.FUNCtion.DOMain.COUPLE

Description

For channels 1 to 4 (*Ch*), specifies whether to set the coupling of the analysis range of the SCPI.CALCulate(*Ch*).SESelected.FUNCtion.EXECute object for all traces.

Variable

	<i>Status</i>
Description	On/off of the trace coupling of the analysis range.
Data type	Boolean type (Boolean)
Range	Select from the following. <ul style="list-style-type: none"> •True or -1 Specifies the analysis range with the trace coupling. •False or 0 Specifies the analysis range for each trace.
Preset value	True or -1

For information on the variable (*Ch*), refer to Table 7-4, “Variable (*Ch*),” on page 126.

Examples

```
Dim TrCpl As Boolean
SCPI.CALCulate(1).SESelected.FUNCtion.DOMain.COUPLE = False
TrCpl = SCPI.CALCulate(1).SESelected.FUNCtion.DOMain.COUPLE
```

SCPI.CALCulate(*Ch*).SELected.FUNCtion.PEXCursion

SCPI.CALCulate(*Ch*).SELected.FUNCtion.PEXCursion

Object type

Property

Syntax

SCPI.CALCulate(*Ch*).SELected.FUNCtion.PEXCursion = *Value*

Value = SCPI.CALCulate(*Ch*).SELected.FUNCtion.PEXCursion

Description

For the active trace of channels 1 to 4 (*Ch*), sets the lower limit of peak excursion value (the minimum value of the difference relative to the right and left adjacent measurement points) when executing the peak search with the **SCPI.CALCulate(*Ch*).SELected.FUNCtion.EXECute** object. For information on the peak excursion value, see Section “Searching for the Peak” in the *E5061A/E5062A User’s Guide*.

Variable

	<i>Value</i>
Description	Lower limit of peak excursion value
Data type	Double precision floating point type (Double)
Range	0 to 5E8
Preset value	3
Unit	Varies depending on the data format. <ul style="list-style-type: none">• Log magnitude (MLOG) : dB (decibel)• Phase (PHAS), Expanded phase (UPH) or Positive phase (PPH) : ° (degree)• Group delay (GDEL) : s (second)• Others : No unit
Note	If the specified variable is out of the allowable setup range, the minimum value (if the lower limit of the range is not reached) or the maximum value (if the upper limit of the range is exceeded) is set.

For information on the variable (*Ch*), see Table 7-4, “Variable (*Ch*)”, on page 126.

Examples

```
Dim PeakExc As Double
SCPI.CALCulate(1).PARameter(1).SElect
SCPI.CALCulate(1).SELected.FUNCtion.TYPE = "peak"
SCPI.CALCulate(1).SELected.FUNCtion.PEXCursion = 1.5
PeakExc = SCPI.CALCulate(1).SELected.FUNCtion.PEXCursion
```

SCPI.CALCulate(*Ch*).SELected.FUNCtion.POINts

Object type

Property

Syntax

Value = SCPI.CALCulate(*Ch*).SELected.FUNCtion.POINts

Description

For the active trace of channels 1 to 4 (*Ch*), reads out the number of data pairs of the analysis result of the SCPI.CALCulate(*Ch*).SELected.FUNCtion.EXECute object.

For the analysis of the mean value or the search of the maximum value, 1 is always read out; for the search of all peaks or the search of all targets, the total number of searched measurement points is read out. (Read only)

Variable

	<i>Value</i>
Description	Number of analyzed data pairs
Data type	Long integer type (Long)

For information on the variable (*Ch*), see Table 7-4, “Variable (*Ch*)”, on page 126.

Examples

```
Dim AnaPoin As Long
SCPI.CALCulate(1).PARameter(1).SElect
SCPI.CALCulate(1).SELected.FUNCtion.TYPE = "ape"
SCPI.CALCulate(1).SELected.FUNCtion.EXECute

Property

Syntax

SCPI.CALCulate(*Ch*).SELected.MARKer.FUNCtion.DOMain.STATE = *Status**Status* = SCPI.CALCulate(*Ch*).SELected.MARKer.FUNCtion.DOMain.STATE

Description

For channels 1 to 4 (*Ch*), sets whether to use an arbitrary range when executing the marker search.

When the trace coupling is off, the active trace is the target to be set.

Variable

	<i>Status</i>
Description	Selects the search range.
Data type	Boolean type (Boolean)
Range	Select from the following. •True or -1 Specifies an arbitrary range ^{*1} . •False or 0 Specifies the entire sweep range.
Preset value	False or 0

*1. Specify with the SCPI.CALCulate(*Ch*).SELected.MARKer.FUNCtion. DOMain.START object and the SCPI.CALCulate(*Ch*).SELected.MARKer.FUNCtion. DOMain.STOP object.

For information on the variable (*Ch*), refer to Table 7-4, “Variable (*Ch*)”, on page 126.

Examples

```
Dim SchRnge As Boolean
SCPI.CALCulate(1).SELected.MARKer.FUNCtion.DOMain.START = 1.5E9
SCPI.CALCulate(1).SELected.MARKer.FUNCtion.DOMain.STOP = 1.8E9
SCPI.CALCulate(1).SELected.MARKer.FUNCtion.DOMain.STATE = True
SchRnge = SCPI.CALCulate(1).SELected.MARKer.FUNCtion.DOMain.STATE
```

Equivalent key

[Marker Search] - Search Range - Search Range [ON/OFF]

SCPI.CALCulate(Ch).SELected.MARKer.FUNCtion. DOMain.STOP

Object type

Property

Syntax

SCPI.CALCulate(*Ch*).SELected.MARKer.FUNCtion.DOMain.STOP = *Value*

Value = SCPI.CALCulate(*Ch*).SELected.MARKer.FUNCtion.DOMain.STOP

Description

For channels 1 to 4 (*Ch*), sets the stop value of the marker search range.

When the trace coupling is off, the active trace is the target to be set.

Variable

	<i>Value</i>
Description	Stop value of the search range
Data type	Double precision floating point type (Double)
Preset value	0
Unit	Hz (hertz), dBm or s (second)

For information on the variable (*Ch*), refer to Table 7-4, “Variable (*Ch*),” on page 126.

Examples

```
Dim SchStop As Double
SCPI.CALCulate(1).SELected.MARKer.FUNCtion.DOMain.STOP = 1.8E9
SchStop = SCPI.CALCulate(1).SELected.MARKer.FUNCtion.DOMain.STOP
```

NOTE	When performing the operation from the front panel, you select the search type and execute the search at the same time.

SCPI.CALCulate(*Ch*).SELected.MARKer.FUNCTion.MULTi.PEXCursion

Object type

Property

Syntax

SCPI.CALCulate(*Ch*).SELected.MARKer(*Mk*).FUNCtion.PEXCursion = *Value**Value* = SCPI.CALCulate(*Ch*).SELected.MARKer(*Mk*).FUNCtion.PEXCursion

Description

For the active trace of channels 1 to 4 (*Ch*), sets the lower limit of peak excursion value when executing the multi peak search. For information on the peak excursion value, see Section “Searching for the Peak” in the *E5061A/E5062A User’s Guide*.

Variable

	<i>Value</i>
Description	Lower limit of peak excursion value
Data type	Double precision floating point type (Double)
Range	0 to 5E8
Preset value	3
Unit	Varies depending on the data format. <ul style="list-style-type: none"> • Log magnitude (MLOG): dB (decibel) • Phase (PHAS), Expanded phase (UPH) or Positive phase (PPH): ° (degree) • Group delay (GDEL): s (second) • Others: No unit
Note	If the specified variable is out of the allowable setup range, the minimum value (if the lower limit of the range is not reached) or the maximum value (if the upper limit of the range is exceeded) is set.

For information on the variable (*Ch*) and the variable (*Mk*), see Table 7-4, “Variable (Ch),” on page 126 and Table 7-6, “Variable (Mk),” on page 170, respectively.

Examples

```
Dim PeakExc As Double
SCPI.CALCulate(1).PARameter(1).SElect
SCPI.CALCulate(1).SELected.MARKer.FUNCTion.MULTi.TYPE = "peak"
SCPI.CALCulate(1).SELected.MARKer.FUNCTion.MULTi.PEXCursion = 0.2
PeakExc =
SCPI.CALCulate(1).SELected.MARKer.FUNCTion.MULTi.PEXCursion
```

SCPI.CALCulate(*Ch*).SELected.MARKer(*Mk*).FUNCtion.MULTi.PPOLarity = *Param**Param* = SCPI.CALCulate(*Ch*).SELected.MARKer(*Mk*).FUNCtion.MULTi.PPOLarity

Description

For the active trace of channels 1 to 4 (*Ch*), selects the polarity of the multi peak search.

Variable

	<i>Param</i>
Description	Polarity for peak search
Data type	Character string type (String)
Range	Select from the following. •"POSitive" Specifies the positive peak. •"NEGative" Specifies the negative peak. •"BOTH" Specifies both the positive peak and the negative peak.
Preset value	"POSitive"

For information on the variable (*Ch*) and the variable (*Mk*), see Table 7-4, “Variable (*Ch*),” on page 126 and Table 7-6, “Variable (*Mk*),” on page 170, respectively.

Examples

SCPI.CALCulate(Ch).SESelected.RLIMit.DATA

Object type

Property

Syntax

SCPI.CALCulate(*Ch*).SESelected.RLIMit.DATA = *Data*

Data = SCPI.CALCulate(*Ch*).SESelected.RLIMit.DATA

Description

For the active trace of channel 1 to channel 4 (specified with the SCPI.CALCulate(*Ch*).PARameter(*Tr*).SElect command), sets the ripple limit table.

The data transfer format when this command is executed depends on the setting with the SCPI.FORMat.DATA command.

Variable

	<i>Status</i>
Description	<p>Indicates the array data (for ripple line) of $1 + \text{Num}$ (number of limit lines) $\times 4$. Where n is an integer between 1 and Num.</p> <ul style="list-style-type: none"> • <i>Data(0)</i> The number of limit lines you want to set. Specify an integer ranging 0 to 12. When the number of limit lines is set to 0 (clears the limit table), the variable <i>Data</i> is only required with <i>Data(0)</i>. • <i>Data(n \times 4 - 3)</i> The type of the n-th line. Specify an integer 0 to 1 as follows. 0: OFF 1: ON • <i>Data(n \times 4 - 2)</i> The value on the horizontal axis (frequency/power/time) of the start point of the n-th line. • <i>Data(n \times 4 - 1)</i> The value on the horizontal axis (frequency/power/time) of the end point of the n-th line. • <i>Data(n \times 4)</i> The ripple line value (dB) of the n-th line. <p>The index of the array starts from 0.</p>
Data type	Variant type (Variant)
Note	If there is no array data of $1 + \text{Num}$ (number of set lines) $\times 4$ when setting a formatted memory array, an error occurs when executed and the object is ignored. For <i>Data(n \times 4 - 3)</i> in the array data, if you specify an integer other than 0 or 1, an error occurs when executed. For <i>Data(n \times 4 - 2)</i> and <i>Data(n \times 4 - 1)</i> in the array data, if the specified value is out of the allowable setup range, the minimum value (if the lower limit of the range is not reached) or the maximum value (if the upper limit of the range is exceeded) is set.

SCPI.CALCulate(Ch).SELected.RLIMit.DISPlay.LINE

Object type

Property

Syntax

SCPI.CALCulate(Ch).SELected.RLIMit.DISPlay.LINE = Status

Status = SCPI.CALCulate(Ch).SELected.RLIMit.DISPlay.LINE

Description

For the active trace of channel 1 to channel 4 (specified with the SCPI.CALCulate(Ch).PARameter(Tr).SELect command), turns ON/OFF the ripple limit line display.

Variable

	<i>Status</i>
Description	ON/OFF the ripple limit line display.
Data type	Boolean type (Boolean)
Range	Select from the following. •True or -1 Turns ON the ripple limit line display. •False or 0 Turns OFF the ripple limit line display.
Preset value	False or 0

For information on the variable (*Ch*), see Table 7-4, “Variable (Ch),” on page 126.

Examples

```
Dim RLimDisp As Boolean
SCPI.CALCulate(1).SELected.RLIMit.DISPlay.LINE = True
RLimDisp = SCPI.CALCulate(1).SELected.RLIMit.DISPlay.LINE
```

Object type

Property

Syntax

SCPI.CALCulate(*Ch*).SELected.RLIMit.DISPlay.SESelect = Value

Value = SCPI.CALCulate(*Ch*).SELected.RLIMit.DISPlay.SESelect

Description

For channel 1 to channel 4 (specified with the SCPI.CALCulate(*Ch*).PARameter(*Tr*).SElect command), sets the ripple limit band for ripple value display.

Variable

	<i>Value</i>
Description	The ripple limit band.
Data type	Long integer type (Long)
Range	1 to 12
Preset value	1

For information on the variable (*Ch*), see Table 7-4, “Variable (*Ch*),” on page 126.

Examples

```
Dim RBand As Long  
SCPI.CALCulate(1).SELected.RLIMit.DISPlay.SESelect = 2  
RBand = SCPI.CALCulate(1).SELected.RLIMit.DISPlay.SESelect

Object type

Property

Syntax

SCPI.CALCulate(Ch).SELected.RLIMit.DISPlay.VALUE = Param

Param = SCPI.CALCulate(Ch).SELected.RLIMit.DISPlay.VALUE

Description

For the active trace of channel 1 to channel 4 (specified with the SCPI.CALCulate(Ch).PARameter(Tr).SELect command), selects the display type of ripple value.

Variable

	<i>Param</i>
Description	The displaying type of ripple value.
Data type	Character string type (String)
Range	Select from the following. •"OFF" Specifies the display off. •"ABSolute" Specifies the absolute value for display type. •"MARgin" Specifies the margin for display type.
Preset value	"OFF"

For information on the variable (*Ch*), see Table 7-4, “Variable (Ch),” on page 126.

Examples

```
Dim RDisp As String
SCPI.CALCulate(1).SELected.RLIMit.DISPlay.VALUE = "ABSolute"
RDisp = SCPI.CALCulate(1).SELected.RLIMit.DISPlay.VALUE
```

SCPI.CALCulate(*Ch*).SELected.RLIMit.FAIL

SCPI.CALCulate(*Ch*).SELected.RLIMit.FAIL

Object type

Property

Syntax

Status = SCPI.CALCulate(*Ch*).SELected.RLIMit.FAIL

Description

For the active trace of channel 1 to channel 4 (specified with the SCPI.CALCulate(*Ch*).PARameter(*Tr*).SELect command), reads out the ripple test result. (Read only)

Variable

	<i>Status</i>
Description	The ripple test result
Data type	Boolean type (Boolean)
Range	Select from the following. •True or -1 Turns ON the ripple test result is FAIL. •False or 0 Turns OFF the ripple test result is FAIL.
Note	When the ripple test if set to OFF, False or 0 is always read out.

For information on the variable (*Ch*), see Table 7-4, “Variable (*Ch*),” on page 126.

SCPI.CONTrol.HANDler.A.DATA

Object type

Property

Syntax

SCPI.CONTrol.HANDler.A.DATA = *Value*

Description

Outputs port information to output port A (A0 to A7) of the handler I/O. Port information is outputted as 8-bit binary data using A0 as LSB and A7 as MSB. (No read)

For more information on the handler I/O, see Chapter “Communication with External Instruments Using Handler I/O Port” in the *E5061A/E5062A Programmer’s Guide*.

Variable

	<i>Value</i>
Description	Port information (output)
Data type	Long integer type (Long)
Range	0 to 255
Note	If the specified variable is out of the allowable setup range, the minimum value (if the lower limit of the range is not reached) or the maximum value (if the upper limit of the range is exceeded) is set.

Examples

SCPI.CONTrol.HANDler.A.DATA = 15

Equivalent key

No equivalent key is available on the front panel.

SCPI.CONTrol.HANDler.B.DATA

Object type

Property

Syntax

SCPI.CONTrol.HANDler.B.DATA = *Value*

Description

Outputs port information to output port B (B0 to B7) of the handler I/O. Port information is outputted as 8-bit binary data using B0 as LSB and B7 as MSB. (No read)

NOTE

The bit 6 of the data outputted by this project is ignored when outputting the INDEX signal is turned ON (specifying True with the SCPI.CONTrol.HANDler.EXTrusion.INDEX.STATE object).

The bit 7 of the data outputted by this project is ignored when outputting the READY FOR TRIGGER signal is turned ON (specifying True with the SCPI.CONTrol.HANDler.EXTrusion.RTRigger.STATE object).

For more information on the handler I/O, see Chapter “Communication with External Instruments Using Handler I/O Port” in the *E5061A/E5062A Programmer’s Guide*.

Variable

	<i>Value</i>
Description	Port information (output)
Data type	Long integer type (Long)
Range	0 to 255
Note	If the specified variable is out of the allowable setup range, the minimum value (if the lower limit of the range is not reached) or the maximum value (if the upper limit of the range is exceeded) is set.

Examples

SCPI.CONTrol.HANDler.F.DATA

Object type Property

Syntax SCPI.CONTrol.HANDler.F.DATA = *Value*

Description Outputs port information to output port F (port A + port B) of the handler I/O. Port information is outputted as 16-bit binary using A0 as LSB and B7 as MSB. (No read)

NOTE The bit 14 of the data outputted by this project is ignored when outputting the INDEX signal is turned ON (specifying True with the SCPI.CONTrol.HANDler.EXTension.INDEX.STATE object).

The bit 15 of the data outputted by this project is ignored when outputting the READY FOR TRIGGER signal is turned ON (specifying True with the SCPI.CONTrol.HANDler.EXTension.RTRigger.STATE object).

For more information on the handler I/O, see Chapter “Communication with External Instruments Using Handler I/O Port” in the *E5061A/E5062A Programmer’s Guide*.

Variable

	<i>Value</i>
Description	Port information (output)
Data type	Long integer type (Long)
Range	0 to 65535
Note	If the specified variable is out of the allowable setup range, the minimum value (if the lower limit of the range is not reached) or the maximum value (if the upper limit of the range is exceeded) is set.

SCPI.DISPlay.WINDoW(Ch).ANNotation.MARKer.SINGle.STATE

Object type Property

Syntax SCPI.DISPlay.WINDoW(*Ch*).ANNotation.MARKer.SINGle.STATE = *Status* *Status* = SCPI.DISPlay.WINDoW(*Ch*).ANNotation.MARKer.SINGle.STATEDescription For the active trace of channels 1 to 4 (*Ch*), turns ON/OFF the active trace marker value display.

When set to OFF, the marker values of all displayed traces (markers) are displayed.

Variable

	<i>Status</i>
Description	ON/OFF of the active trace marker value display
Data type	Boolean type (Boolean)
Range	Select from the following. •True or -1 Displays the marker value of the active trace only. •False or 0 Displays the marker values of all traces.
Preset value	True or -1

For information on the variable (*Ch*), see Table 7-4, “Variable (*Ch*),” on page 126.Examples Dim MkSingle As Boolean
 SCPI.DISPlay.WINDoW(1).ANNotation.MARKer.SINGle.STATE = True
 MkSingle = SCPI.DISPlay.WINDoW(1).ANNotation.MARKer.SINGle.STATEEquivalent key **[Marker Fctn] - Annotation Options - Active Only**

SCPI.DISPlay.WINDoW(Ch).LABel

Object type

Property

Syntax

SCPI.DISPlay.WINDoW(*Ch*).LABel = *Status*

Status = SCPI.DISPlay.WINDoW(*Ch*).LABel

Description

Turns ON/OFF the graticule label display of the graph of channels 1 to 4 (*Ch*).

Variable

	<i>Status</i>
Description	ON/OFF of the graticule label display of the graph
Data type	Boolean type (Boolean)
Range	Select from the following. <ul style="list-style-type: none">•True or -1 Turns ON the graticule label display.•False or 0 Turns OFF the graticule label display.
Preset value	True or -1

For information on the variable (*Ch*), see Table 7-4, “Variable (Ch),” on page 126.

Examples

```
Dim DispGrat As Boolean
SCPI.DISPlay.WINDoW(1).LABel = False
DispGrat = SCPI.DISPlay.WINDoW(1).LABel
```

Equivalent key

[Display] - Graticule Label

COM Object Reference
SCPI.DISPlay.WINDOW(*Ch*).MAXimize

SCPI.DISPlay.WINDOW(*Ch*).MAXimize

Object type

Property

Syntax

SCPI.DISPlay.WINDOW(*Ch*).MAXimize = *Status*

Status = SCPI.DISPlay.WINDOW(*Ch*).MAXimize

Description

Turns ON/OFF the maximization of the active trace of channels 1 to 4 (*Ch*).

If you turned ON the maximization, only the maximized active trace is displayed in the window and the other traces are not displayed.

Variable

	<i>Status</i>
Description	ON/OFF of the maximization of the active trace
Data type	Boolean type (Boolean)
Range	Select from the following. •True or -1 Turns ON the maxim display. •False or 0 Turns OFF the maxim display.
Preset value	False or 0

For information on the variable (*Ch*), see Table 7-4, “Variable (*Ch*),” on page 126.

Examples

```
Dim TracMax As Boolean
SCPI.CALCulate(1).PARameter(2).SElect
SCPI.DISPlay.WINDOW(1).MAXimize = True
TracMax = SCPI.DISPlay.WINDOW(1).MAXimize
```

SCPI.DISPlay.WINDoW(*Ch*).SPLit

Object type

Property

Syntax

SCPI.DISPlay.WINDoW(*Ch*).SPLit = *Param*
Param = SCPI.DISPlay.WINDoW(*Ch*).SPLit

Description

Sets the graph layout of channels 1 to 4 (*Ch*).

Variable

	<i>Param</i>
Description	Graph layout
Data type	Character string type (String)
Range	Select from the following. •"D1" See Figure 7-2 on page 247. •"D12" See Figure 7-2. •"D1_2" See Figure 7-2. •"D112" See Figure 7-2. •"D1_1_2" See Figure 7-2. •"D123" See Figure 7-2. •"D1_2_3" See Figure 7-2. •"D12_33" See Figure 7-2. •"D11_23" See Figure 7-2. •"D13_23" See Figure 7-2. •"D12_13" See Figure 7-2. •"D1234" See Figure 7-2. •"D1_2_3_4" See Figure 7-2. •"D12_34" See Figure 7-2.
Preset value	"D1"

For information on the variable (*Ch*), see Table 7-4, “Variable (Ch),” on page 126.

Examples

```
Dim TracAloc As String
SCPI.DISPlay.WINDoW(1).SPLit = "d1_2"
TracAloc = SCPI.DISPlay.WINDoW(1).SPLit
```

SCPI.DISPlay.WINDoW(*Ch*).TITLE.DATA

Object type

Property

Syntax

SCPI.DISPlay.WINDoW(*Ch*).TITLE.DATA = *Lbl*

Lbl = SCPI.DISPlay.WINDoW(*Ch*).TITLE.DATA

Description

Sets the title label displayed in the title area of channels 1 to 4 (*Ch*).

Variable

	<i>Lbl</i>
Description	Title label
Data type	Character string type (String)
Range	254 characters or less
Preset value	""

For information on the variable (*Ch*), see Table 7-4, “Variable (*Ch*),” on page 126.

Examples

```
Dim TtlLbl As String
SCPI.DISPlay.WINDoW(1).TITLE.DATA = "Filter"
SCPI.DISPlay.WINDoW(1).TITLE.STATE = True
TtlLbl = SCPI.DISPlay.WINDoW(1).TITLE.DATA

Property

Syntax

SCPI.DISPlay.WINDOW(*Ch*).TRACe(*Tr*).Y.SCALE.RLEVel = *Value**Value* = SCPI.DISPlay.WINDOW(*Ch*).TRACe(*Tr*).Y.SCALE.RLEVel

Description

For traces 1 to 4 (*Tr*) of channels 1 to 4 (*Ch*), sets the value of the reference division line.

Variable

	<i>Value</i>
Description	Value of reference division line
Data type	Double precision floating point type (Double)
Range	-5E8 to 5E8
Preset value	0 ^{*1}
Unit	Varies depending on the data format. <ul style="list-style-type: none"> • Log magnitude (MLOG): dB (decibel) • Phase (PHAS), Expanded phase (UPH) or Positive phase (PPH): ° (degree) • Group delay (GDEL): s (second) • Others: No unit
Note	If the specified variable is out of the allowable setup range, the minimum value (if the lower limit of the range is not reached) or the maximum value (if the upper limit of the range is exceeded) is set.

*1. The preset value is 1 when the data format is SWR.

For information on the variable (*Ch*) and the variable (*Tr*), see Table 7-4, “Variable (*Ch*),” on page 126 and Table 7-5, “Variable (*Tr*),” on page 128, respectively.

Examples

```
Dim RefLvl As Double
SCPI.CALCulate(1).PARameter(2).SElect
SCPI.CALCulate(1).SELected.FORMAT = "phas"

SCPI.FORMat.BORDer

Object type

Property

Syntax

SCPI.FORMat.BORDer = *Param*

Param = SCPI.FORMat.BORDer

Description

When the data transfer format is set to the binary transfer format (specify "REAL" with SCPI.FORMat.DATA object), sets the transfer order of each byte in data (byte order).

NOTE

This object is NOT used when controlling the E5061A/E5062A using COM objects in the E5061A/E5062A VBA.

Variable

	<i>Param</i>
Description	Byte order
Data type	Character string type (String)
Range	Select from the following. <ul style="list-style-type: none">•"NORMAL" Specifies the byte order in which transfer starts from the byte including MSB (Most Significant Bit).•"SWAPPed" Specifies the byte order in which transfer starts from the byte including LSB (Least Significant Bit).
Preset value	"NORMAL"

Examples

```
Dim BitOrd As String  
SCPI.FORMat.BORDer "swap"  
BitOrd = SCPI.FORMat.BORDer
```

Related objects

SCPI.FORMat.DATA on page 271

Equivalent key

No equivalent key is available on the front panel.

SCPI.FORMat.DATA

Object type	Property
Syntax	SCPI.FORMat.DATA = <i>Param</i> <i>Param</i> = SCPI.FORMat.DATA
Description	<p>Use the following SCPI commands to set the format to read the data.</p> <ul style="list-style-type: none">• :CALC{1-4}:DATA:FDAT• :CALC{1-4}:DATA:FMEM• :CALC{1-4}:DATA:SDAT?• :CALC{1-4}:DATA:SMEM?• :CALC{1-4}:FUNC:DATA?• :CALC{1-4}:LIM:DATA• :CALC{1-4}:LIM:REP?• :SENS{1-4}:FREQ:DATA?• :SENS{1-4}:SEGM:DATA

NOTE ASCII transfer format must be specified when controlling the E5061A/E5062A using SCPI commands with the **Parse** object in the E5061A/E5062A VBA.

Variable

	<i>Param</i>
Description	Data transfer format
Data type	Character string type (String)
Range	Select from the following. <ul style="list-style-type: none">• "ASCII" Specifies the ASCII transfer format.• "REAL" Specifies the IEEE 64-bit floating point binary transfer format.• "REAL32" Specifies the IEEE 32-bit floating point binary transfer format.
Preset value	"NORMAl"

Examples
Dim Fmt As String
SCPI.FORMat.DATA = "asc"
Fmt = SCPI.FORMat.DATA

Related objects SCPI.FORMat.BORDer on page 270
Parse on page 117

Equivalent key No equivalent key is available on the front panel.

SCPI.HCOPy.ABORT

Object type	Method
Syntax	SCPI.HCOPy.ABORT
Description	Aborts the print output. (No read)
Examples	SCPI.HCOPy.ABORT
Related objects	SCPI.HCOPy.IMMEDIATE on page 273
Equivalent key	[System] - Abort Printing

SCPI.HCOPy.IMAGE

Object type	Property
Syntax	SCPI.HCOPy.IMAGE = <i>Param</i> <i>Param</i> = SCPI.HCOPy.IMAGE
Description	Selects the print color for output to the printer.
Variable	

	<i>Param</i>
Description	Print color for output to the printer.
Data type	Character string type (String)
Range	Select from the following. <ul style="list-style-type: none">•"NORMal" Specifies printing in close color to the display color.•"INVert" Specifies printing in the inverted color of the display color.
Preset value	"INVert"

Examples	Dim Img As String SCPI.HCOPy.IMAGE = "norm" Img = SCPI.HCOPy.IMAGE
Related objects	SCPI.HCOPy.IMMEDIATE on page 273
Equivalent key	[System] - Invert Image

SCPI.HCOPy.IMMEDIATE

Object type	Method
Syntax	SCPI.HCOPy.IMMEDIATE
Description	Outputs the display image on the LCD display to the printer connected to the E5061A/E5062A. (No read)
NOTE	When printing the E5061A/E5062A measurement screen, execute the VBA program with the Visual Basic editor closed. For the method, see “Running a Program from the E5061A/E5062A Measurement Screen” on page 50.
Examples	SCPI.HCOPy.IMMEDIATE
Related objects	SCPI.HCOPy.ABORT on page 272 SCPI.HCOPy.IMAGE on page 272
Equivalent key	[System] - Print When performing the operation from the front panel, the image on the LCD display memorized in the volatile memory (clipboard) (the image on the LCD display when the [Capture] ([System]) key is pressed) is printed. Notice that, if no image is memorized in the clipboard, in the same way as the SCPI.HCOPy.IMMEDIATE object, the image on the LCD display at the execution is memorized in the clipboard and then it is printed.

SCPI.IEEE4882.CLS

Object type	Method
Syntax	SCPI.IEEE4882.CLS
Description	<p>Clears the followings. (No read)</p> <ul style="list-style-type: none">• Error Queue• Status Byte Register• Standard Event Status Register• Operation Status Event Register• Questionable Status Event Register• Questionable Limit Status Event Register• Questionable Limit Channel Status Event Register
Examples	SCPI.IEEE4882.CLS
Equivalent key	No equivalent key is available on the front panel.

SCPI.IEEE4882.ESE

Object type	Property
Syntax	SCPI.IEEE4882.ESE = <i>Value</i>
	<i>Value</i> = SCPI.IEEE4882.ESE
Description	Sets the value of the Standard Event Status Enable Register.
Variable	

	<i>Value</i>
Description	Value of the Standard Event Status Enable Register
Data type	Long integer type (Long)
Range	0 to 255
Preset value	0
Note	If the specified variable is out of the allowable setup range, the result of bitwise AND with 255 (0xff) is set.

Examples	<pre>Dim Stat As Long SCPI.IEEE4882.ESE = 16 Stat = SCPI.IEEE4882.ESE</pre>
Related objects	SCPI.IEEE4882.SRE on page 278
Equivalent key	No equivalent key is available on the front panel.

SCPI.IEEE4882.ESR

Object type

Property

Syntax

Value = SCPI.IEEE4882.ESR

Description

Reads out the value of the Standard Event Status Register. Executing this object clears the register value. (Read only)

Variable

	<i>Value</i>
Description	Value of the Standard Event Status Register
Data type	Long integer type (Long)

Examples

```
Dim Stat As Long
Stat = SCPI.IEEE4882.ESR
```

Equivalent key

No equivalent key is available on the front panel.

SCPI.IEEE4882.IDN

Object type

Property

Syntax

Cont = SCPI.IEEE4882.IDN

Description

Reads out the product information (manufacturer, model number, serial number, and firmware version number) of the E5061A/E5062A. (Read only)

Variable

	<i>Cont</i>
Description	Product information ("{string 1},{string 2},{string 3},{string 4}") <ul style="list-style-type: none"> • {string 1} Manufacturer. Agilent Technologies is always read out. • {string 2} Model number (example: E5061A). • {string 3} Serial number (example: JP1KI00101). • {string 4} Firmware version number (example: 03.00).
Data type	Character string type (String)

Examples

```
Dim Who As String
Who = SCPI.IEEE4882.IDN
```

Equivalent key

[System] - Firmware Revision**[System] - Service Menu - Enable Options - Serial Number**

SCPI.IEEE4882.OPC

Object type	Property						
Syntax	(1) SCPI.IEEE4882.OPC = <i>Dummy</i> (2) <i>Value</i> = SCPI.IEEE4882.OPC						
Description	<p>Case (1): Specifies so that 1 is set to OPC bit (bit 0) of the Standard Event Status Register is set to 1 when all of pending operations complete. For information on the structure of the status register, see Appendix “Status Reporting System” in the <i>E5061A/E5062A Programmer’s Guide</i>.</p> <p>Case (2): Specifies so that 1 is read when all of pending operations complete.</p>						
Variable	Case (2): <table border="1"><thead><tr><th></th><th><i>Value</i></th></tr></thead><tbody><tr><td>Description</td><td>1 returned when all pending operations are complete</td></tr><tr><td>Data type</td><td>Long integer type (Long)</td></tr></tbody></table>		<i>Value</i>	Description	1 returned when all pending operations are complete	Data type	Long integer type (Long)
	<i>Value</i>						
Description	1 returned when all pending operations are complete						
Data type	Long integer type (Long)						
Examples	<p>Case (1) : SCPI.IEEE4882.OPC = 1</p> <p>Case (2) : Dim Dmy As Long Dmy = SCPI.IEEE4882.OPC</p>

Equivalent key	No equivalent key is available on the front panel.						

SCPI.IEEE4882.OPT

Object type	Property								
Syntax	<i>Cont</i> = SCPI.IEEE4882.OPT								
Description	Reads out the identification numbers of options installed in the E5061A/E5062A. (Read only)								
Variable									
	<table border="1"><tr><td></td><td><i>Cont</i></td></tr><tr><td>Description</td><td>Identification numbers of installed options</td></tr><tr><td>Data type</td><td>Character string type (String)</td></tr><tr><td>Note</td><td>If there is no installed option, 0 is read out.</td></tr></table>		<i>Cont</i>	Description	Identification numbers of installed options	Data type	Character string type (String)	Note	If there is no installed option, 0 is read out.
	<i>Cont</i>								
Description	Identification numbers of installed options								
Data type	Character string type (String)								
Note	If there is no installed option, 0 is read out.								
Examples	Dim OptNum As String OptNum = SCPI.IEEE4882.OPT								
Equivalent key	No equivalent key is available on the front panel.								

SCPI.IEEE4882.RST

Object type	Method
Syntax	SCPI.IEEE4882.RST
Description	Presets the setting state of the E5061A/E5062A. There is the following difference from the setting state preset with the SCPI.SYSTem.PRESet object. For details, see Appendix “List of Default Values” in the <i>E5061A/E5062A User’s Guide</i> . (No read) <ul style="list-style-type: none">The continuous initiation mode (see the SCPI.INITiate(Ch).CONTinuous object) of channel 1 is set to OFF.
Examples	SCPI.IEEE4882.RST
Related objects	SCPI.SYSTem.PRESet on page 422 SCPI.INITiate(Ch).CONTinuous on page 280
Equivalent key	No equivalent key is available on the front panel.

SCPI.IEEE4882.SRE

Object type

Property

Syntax

SCPI.IEEE4882.SRE = *Value*

Value = SCPI.IEEE4882.SRE

Description

Sets the value of the Service Request Enable Register.

Variable

	<i>Value</i>
Description	Value of the Service Request Enable Register
Data type	Long integer type (Long)
Range	0 to 255
Preset value	0
Note	If the specified variable is out of the allowable setup range, the result of bitwise AND with 255 (0xff) is set. Note that bit 6 cannot be set to 1.

Examples

```
Dim Stat As Long
SCPI.IEEE4882.SRE = 8
Stat = SCPI.IEEE4882.SRE
```

SCPI.IEEE4882.WAI

Object type	Method
Syntax	SCPI.IEEE4882.WAI
Description	Waits for the execution of all objects sent before this object to be completed. (No read)
Examples	SCPI.TRIGger.SEQuence.SOURce = "bus" SCPI.TRIGger.SEQuence.SINGLE SCPI.IEEE4882.WAI MsgBox "Done"
Equivalent key	No equivalent key is available on the front panel.

COM Object Reference
SCPI.INITiate(*Ch*).CONTinuous

SCPI.INITiate(*Ch*).CONTinuous

Object type

Property

Syntax

SCPI.INITiate(*Ch*).CONTinuous = *Status*

Status = SCPI.INITiate(*Ch*).CONTinuous

Description

Turns ON/OFF of the continuous initiation mode (setting by which the trigger system initiates continuously) of channels 1 to 4 (*Ch*) in the trigger system.

For more information on the trigger system, see Section “Trigger System” in the *E5061A/E5062A Programmer’s Guide*.

Variable

	<i>Status</i>
Description	ON/OFF of the continuous initiation mode
Data type	Boolean type (Boolean)
Range	Select from the following. •True or -1 Turns ON the continuous initiation mode. •False or 0 Turns OFF the continuous initiation mode.
Preset value	Varies depending on [variable (<i>Ch</i>)] ^{*1}

^{*1}. Only channel 1 is initialized to ON at the execution of the SCPI.SYSTem.PRESet object; all the channels are initialized to OFF at the execution of the SCPI.IEEE4882.RST object.

For information on the variable (*Ch*), see Table 7-4, “Variable (Ch),” on page 126.

Examples

```
Dim ContMode As Boolean  
SCPI.INITiate(2).CONTinuous = True  
ContMode = SCPI.INITiate(2).CONTinuous
```

Related objects

SCPI.INITiate(*Ch*).IMMEDIATE on page 281

Equivalent key

[Trigger] - Continuous (continuous initiation mode ON)

[Trigger] - Hold (continuous initiation mode OFF)

SCPI.INITiate(*Ch*).IMMEDIATE

Object type	Method
Syntax	SCPI.INITiate(<i>Ch</i>).IMMEDIATE
Description	<p>Changes the state of each channel of channels 1 to 4 (<i>Ch</i>) to the initiation state in the trigger system.</p> <p>When this object is executed for a channel in the idle state in the trigger system, it goes into the initiation state immediately. Then, after measurement is executed once, it goes back to the idle state.</p> <p>If this object is executed for a channel that is not in the idle state or a channel for which the continuous initiation mode is set to ON (setting by which the trigger system initiates continuously) in the trigger system, an error occurs when executed and the object is ignored.</p> <p>For more information on the trigger system, see Section “Trigger System” in the <i>E5061A/E5062A Programmer’s Guide</i>. (No read)</p>
Variable	For information on the variable (<i>Ch</i>), see Table 7-4, “Variable (<i>Ch</i>),” on page 126.

COM Object Reference
SCPI.MMEMORY.CATalog(*Dir*)

SCPI.MMEMORY.CATalog(*Dir*)

Object type

Property

Syntax

Cont = SCPI.MMEMORY.CATalog(*Dir*)

Description

Reads out the following information on the built-in storage device of the E5061A/E5062A.

- Space in use
- Available space
- Name and size of all files (including directories) in the specified directory.

To read out the information in the root directory (folder), specify "\\" (backslash). If you want to specify a directory on the floppy disk drive, you need to add "A:" at the beginning of the file name. Separate between directory names (file name) with "\\" (back slash), or "/" (slash). (Read only)

Variable

	<i>Cont</i>
Description	<p>Directory information ("{A},{B},{Name 1},,{Size 1},{Name 2},,,{Size 2},⋯,{Name N},,{Size N}")</p> <p>Where N is the number of all files in the specified directory and n is an integer between 1 and N.</p> <ul style="list-style-type: none"> • {A} Space in use of the built-in storage device (byte)^{*1}. • {B} Available space of the built-in storage device (byte)^{*1}. • {Name n} Name of the n-th file (directory). • {Size n} Size (byte) of the n-th file (directory). Always 0 for directories.
Data type	Character string type (String)

*1.If you specify a directory on the floppy disk drive, it is the capacity of the floppy disk in the drive.

	<i>Dir</i>
Description	Directory name whose information you want to read out
Data type	Character string type (String)
Range	254 characters or less

Examples

```
Dim DirCont As String
DirCont = SCPI.MMEMORY.CATalog("a:\")
```

Equivalent key

No equivalent key is available on the front panel.

SCPI.MMEMemory.COPY

Object type

Property

Syntax

SCPI.MMEMemory.COPY = *File*

Description

Copies a file.

Specify the file name with the extension. If you want to specify a file on the floppy disk drive, you need to add "A:" at the beginning of the file name. When you use directory names (folder names) and file name, separate them with "\" (back slash), or "/" (slash). (No read)

Variable

	<i>File</i>
Description	Indicates 2 file names (copy source and copy destination). • <i>File(0)</i> Copy source file name • <i>File(1)</i> Copy destination file name The index of the array starts from 0.
Data type	Variant type (Variant)
Range	254 characters or less
Note	If the specified copy source file does not exist, an error occurs when executed and the object is ignored. Notice that, if a file with the same name as the specified copy destination file name exists, its contents are overwritten.

Examples

SCPI.MMEMemory.COPY = Array("test/state01.sta", "a:test01.sta")

```
Dim File(1) As Variant
File(0) = "test/state01.sta"
File(1) = "a:test01.sta"
SCPI.MMEMemory.COPY = File
```

Equivalent key

Practical front key operation is not available.

SCPI.MMEMORY.DELETE

Object type

Property

Syntax

SCPI.MMEMORY.DELETE = *File*

Description

Deletes an existing file or directory (folder).

When you delete a directory, all the files and directories in it are deleted.

Specify the file name with the extension. If you want to specify a file or directory on the floppy disk drive, you need to add "A:" at the beginning of its name. When you specify a file (directory) under an existing directory, separate them with "\" (back slash), or "/" (slash).

To delete all files in the directory (folder), specify "\\" (backslash). (No read)

Variable

	<i>File</i>
Description	File name or directory name you want to delete
Data type	Character string type (String)
Range	254 characters or less
Note	If the specified file or directory does not exist, an error occurs when executed and the object is ignored.

Examples

SCPI.MMEMORY.DELETE = "a:\\"

SCPI.MMEMORY.DELETE = "test/state01.sta"

Equivalent key

Practical front key operation is not available.

SCPI.MMEMORY.LOAD.CHANnel.COEfficient

Object type

Property

Syntax

SCPI.MMEMORY.LOAD.CHANnel.STATE = *Register*

Description

Recalls the calibration coefficient for an individual channel from the specified register as the setting of the active channel.

It is possible to recall the register from a different channel where it was saved.

(No read)

Variable

	<i>Register</i>
Description	Register
Data type	Character string type (String)
Range	Select from the following. •"A" Specifies register A. •"B" Specifies register B. •"C" Specifies register C. •"D" Specifies register D.
Note	If no instrument state has been saved in the specified register, an error occurs and the object is ignored.

Examples

SCPI. MMEMORY. LOAD. CHANnel. COEFFficient = "a"

Equivalent key

[Save/Recall] - Recall Channel - Cal Only A|B|C|D

COM Object Reference
SCPI.MMEMORY.LOAD.CHANnel.STATE

SCPI.MMEMORY.LOAD.CHANnel.STATE

Object type

Property

Syntax

SCPI.MMEMORY.LOAD.CHANnel.STATE = *Register*

Description

Recalls the instrument state for an individual channel (saved with the SCPI.MMEMORY.STORE.CHANnel.STATE object) from the specified register as the setting of the active channel.

It is possible to recall the register from a different channel where it was saved. (No read)

Variable

	<i>Register</i>
Description	Register
Data type	Character string type (String)
Range	Select from the following. <ul style="list-style-type: none">• "A" Specifies register A.• "B" Specifies register B.• "C" Specifies register C.• "D" Specifies register D.
Note	If no instrument state has been saved in the specified register, an error occurs and the object is ignored.

Examples

SCPI.MMEMORY.LOAD.CHANnel.STATE = "a"

SCPI.MMEMORY.LOAD.LIMIT

Object type

Property

Syntax

SCPI.MMEMORY.LOAD.LIMIT = *File*

Description

As the limit table for the active trace of the active channel, recalls the specified limit table file (file with the .csv extension saved with the SCPI.MMEMORY.STORE.LIMIT object).

Specify the file name with the extension. If you want to specify a file on the floppy disk drive, you need to add "A:" at the beginning of the file name. When you use directory names and file name, separate them with "\" (back slash), or "/" (slash). (No read)

Variable

	<i>File</i>
Description	File name of limit table (extension ".csv")
Data type	Character string type (String)
Range	254 characters or less
Note	If the specified file does not exist, an error occurs when executed and the object is ignored.

Examples

```
SCPI.DISPlay.WINDOW(1).ACTivate
SCPI.CALCulate(1).PARameter(1).SElect
SCPI.MMEMORY.LOAD.LIMIT = "a:\limit01.csv"
```

```

Object type Property

Syntax SCPI.MMEMORY.MDIRECTORY = *File*

Description Creates a new directory (folder).

If you want to create a directory on the floppy disk drive, you need to add "A:" at the beginning of the directory name. When you create a directory under an existing directory, separate between the directory names with "\ " (back slash), or "/" (slash). (No read)

Variable

	<i>File</i>
Description	Directory name you want to create
Data type	Character string type (String)
Range	254 characters or less
Note	If a directory with the same name as the specified directory name exists, an error occurs when executed and the object is ignored.

Examples SCPI.MMEMORY.MDIRECTORY = "a:\test"

 SCPI.MMEMORY.MDIRECTORY = "test"

Equivalent key Practical front key operation is not available.

COM Object Reference
SCPI.MMEMORY.STORE.CHANNEL.CLEAR

SCPI.MMEMORY.STORE.CHANNEL.CLEAR

Object type	Method
Syntax	SCPI.MMEMORY.STORE.CHANNEL.CLEAR
Description	Deletes the instrument state and calibration coefficient for each channel in all the registers. (No read)
Examples	SCPI.MMEMORY.STORE.CHANNEL.CLEAR
Related objects	SCPI.MMEMORY.STORE.CHANNEL.STATE on page 293
Equivalent key	[Save/Recall] - Save Channel - Clear States - OK

SCPI.MMEMORY.STORE.CHANNEL.COEFFICIENT

Object type	Property
Syntax	SCPI.MMEMORY.STORE.CHANNEL.COEFFICIENT = <i>Register</i>
Description	Saves the instrument calibration coefficient for the active channel into the specified register (volatile memory). (No read)
Variable	

<i>Register</i>	
Description	Register
Data type	Character string type (String)
Range	Select from the following. <ul style="list-style-type: none">• "A" Specifies register A.• "B" Specifies register B.• "C" Specifies register C.• "D" Specifies register D.
Note	If an instrument state has been saved already in the specified register, its contents are overwritten.

Examples	SCPI.MMEMORY.STORE.CHANNEL.COEFFICIENT = "a"
Related objects	
Equivalent key	[Save/Recall] - Save Channel - Cal Only A B C D

SCPI.MMEMORY.STORE.CHANNEL.STATE

Object type

Property

Syntax

SCPI.MMEMORY.STORE.CHANNEL.STATE = *Register*

Description

Saves the instrument state of the items set for the active channel specific to that channel only into the specified register (volatile memory). (No read)

Variable

	<i>Register</i>
Description	Register
Data type	Character string type (String)
Range	Select from the following. •"A" Specifies register A. •"B" Specifies register B. •"C" Specifies register C. •"D" Specifies register D.
Note	If an instrument state has been saved already in the specified register, its contents are overwritten.

Examples

SCPI.MMEMORY.STORE.CHANNEL.STATE = "a"

Related objects

[SCPI.MMEMORY.LOAD.CHANNEL.STATE](#) on page 286

Equivalent key

[Save/Recall] - Save Channel - A|B|C|D

COM Object Reference
SCPI.MMEMORY.STORE.FDATA

SCPI.MMEMORY.STORE.FDATA

Object type

Property

Syntax

SCPI.MMEMORY.STORE.FDATA = *File*

Description

For the active trace of the active channel, saves the formatted data array into a file in the CSV format (extension ".csv").

Specify the file name with the extension. If you want to specify a file on the floppy disk drive, you need to add "A:" at the beginning of the file name. When you use directory names and file name, separate them with "\" (back slash), or "/" (slash). (No read)

Variable

	<i>File</i>
Description	File name in which you want to save the formatted data array (extension ".csv")
Data type	Character string type (String)
Range	254 characters or less
Note	If a file with the same name as the specified file name exists, its contents are overwritten.

Examples

```
SCPI.DISPLAY.WINDOW(1).ACTivate
SCPI.CALCULATE(1).PARAMETER(1).SElect
SCPI.MMEMORY.STORE.FDATA = "a:\trace01.csv"
```

```
SCPI.DISPLAY.WINDOW(1).ACTivate
SCPI.CALCULATE(1).PARAMETER(1).SElect
SCPI.MMEMORY.STORE.FDATA = "test/trace01.csv"
```

Related objects

SCPI.DISPLAY.WINDOW(Ch).ACTivate on page 250

SCPI.CALCULATE(Ch).PARAMETER(Tr).SElect on page 128

Equivalent key

[Save/Recall] - Save Trace Data

SCPI.MMEMORY.STORE.IMAGE

Object type

Property

Syntax

`SCPI.MMEMORY.STORE.IMAGE = File`

Description

Saves the display image on the LCD display at the execution of the object into a file in the bitmap (extension ".bmp") or portable network graphics (extension ".png") format. When saving the E5061A/E5062A measurement screen, execute the VBA program with the Visual Basic editor closed. For more information, see "Running a Program from the E5061A/E5062A Measurement Screen" on page 50.

Specify the file name with the extension. If you want to specify a file on the floppy disk drive, you need to add "A:" at the beginning of the file name. When you use directory names and file name, separate them with "\" (back slash), or "/" (slash). (No read)

Variable

	<i>File</i>
Description	File name in which you want to save the display image on the LCD display (extension ".bmp" or ".png")
Data type	Character string type (String)
Range	254 characters or less
Note	If a file with the same name as the specified file name exists, its contents are overwritten.

Examples

`SCPI.MMEMORY.STORE.IMAGE = "a:\image01.bmp"`

`SCPI.MMEMORY.STORE.IMAGE = "test/image01.png"`

Equivalent key

[System] - Dump Screen Image

When performing the operation from the front panel, the image on the LCD display memorized in the volatile memory (clipboard) (the image on the LCD display when the **[Capture] ([System])** key is pressed) is saved. Notice that, if no image is memorized in the clipboard, in the same way as the **SCPI.MMEMORY.STORE.IMAGE** object, the image on the LCD display at the execution is memorized in the clipboard and then it is saved.

SCPI.MMEMORY.STORE.LIMIT

Object type

Property

Syntax

SCPI.MMEMORY.STORE.LIMIT = *File*

Description

Saves the limit table of the active trace of the active channel into a file in the CSV format (extension ".csv").

Specify the file name with the extension. If you want to specify a file on the floppy disk drive, you need to add "A:" at the beginning of the file name. When you use directory names and file name, separate them with "\" (back slash), or "/" (slash). (No read)

Variable

	<i>File</i>
Description	File name to save the limit table (extension ".csv")
Data type	Character string type (String)
Range	254 characters or less
Note	If a file with the same name as the specified file name exists, its contents are overwritten.

Examples

```
SCPI.DISPLAY.WINDOW(1).ACTivate
SCPI.CALCULATE(1).PARAMETER(1).SElect
SCPI.MMEMORY.STORE.LIMIT = "a:\limit01.csv"
```

```
SCPI.DISPLAY.WINDOW(1).ACTivate
SCPI.CALCULATE(1).PARAMETER(1).SElect
SCPI.MMEMORY.STORE.LIMIT = "test/limit01.csv"
```

[Analysis] - Limit Test - Edit Limit Line - Export to CSV File

SCPI.MMEMORY.STORE.RLIMIT

Object type

Property

Syntax

SCPI.MMEMORY.STORE.RLIMIT = *File*

Description

Saves the ripple limit table of the active trace (specified with the SCPI.CALCulate(Ch).PARameter(Tr).SElect command) of the active channel (specified with the SCPI.DISPlay.WINDOW(Ch).ACTivate command) into a file in the CSV format.

Specify the file name with the .sta extension. If you want to specify a file on the floppy disk drive, you need to add "A:" at the beginning of the file name. When you write directory names and file name, separate them with "/" (slash) or "\\" (backslash).

Notice that if a file with the specified file name already exists, its contents will be overwritten. (Read only)

Variable

	<i>File</i>
Description	File name used to save the ripple limit table (extension ".csv")
Data type	Character string type (String)
Range	254 characters or less
Note	If the specified file does not exist, a runtime error occurs.

For information on the variable (*Ch*), see Table 7-4, “Variable (*Ch*),” on page 126.

Examples (1)

```
SCPI.DISPlay.WINDOW(1).ACTivate
SCPI.CALCulate(1).PARameter(1).SElect
SCPI.MMEMORY.STORE.RLIMIT = "A:\Rlimit01.csv"
```

Examples (2)

```
SCPI.DISPlay.WINDOW(1).ACTivate
SCPI.CALCulate(1).PARameter(1).SElect
SCPI.MMEMORY.STORE.RLIMIT = "test/Rlimit01.csv"
```

SCPI.MMEMORY.STORE.SALL

Object type

Property

Syntax

SCPI.MMEMORY.STORE.SALL = *Status*

Status = SCPI.MMEMORY.STORE.SALL

Description

Selects whether to save the setting of all channels/traces or that of the displayed channels/traces only as the instrument state to be saved.

Variable

	<i>Status</i>
Description	Selecting content to be saved as the instrument state setting.
Data type	Boolean type (Boolean)
Range	Select from the following. <ul style="list-style-type: none">•True or -1 Specifies the setting of all channels/traces as the target to be saved.•False or 0 Specifies the setting of displayed channels/traces only as the target to be saved.
Preset value	False or 0

Examples

```
Dim Obj As Boolean
SCPI.MMEMORY.STORE.SALL = True
Obj = SCPI.MMEMORY.STORE.SALL
```

Related objects

SCPI.MMEMORY.STORE SEGMENT

Object type

Property

Syntax

SCPI.MMEMORY.STORE SEGMENT = *File*

Description

Saves the segment sweep table of the active channel into a file in the CSV format (extension ".csv").

Specify the file name with the extension. If you want to specify a file on the floppy disk drive, you need to add "A:" at the beginning of the file name. When you use directory names and file name, separate them with "\\" (back slash), or "/" (slash). (No read)

Variable

	<i>File</i>
Description	File name to save segment sweep table (extension ".csv")
Data type	Character string type (String)
Range	254 characters or less
Note	If a file with the same name as the specified file name exists, its contents are overwritten.

Examples

```
SCPI.DISPLAY.WINDOW(1).ACTivate  
SCPI.MMEMORY.STORE SEGMENT = "a:\segm01.csv"
```

```
SCPI.DISPLAY.WINDOW(1).ACTivate  
SCPI.MMEMORY.STORE SEGMENT = "test/segm01.csv"
```

SCPI.MMEMORY.STORE.STATE

Object type

Property

Syntax

SCPI.MMEMORY.STORE.STATE = *File*

Description

Saves the instrument state (contents to be saved specified with the SCPI.MMEMORY.STORE.STYPE object) into a file (file with the .sta extension).

Specify the file name with the extension. If you want to specify a file on the floppy disk drive, you need to add "A:" at the beginning of the file name. When you use directory names and file name, separate them with "\" (back slash), or "/" (slash). (No read)

NOTE

The instrument setting file saved with the "autorec.sta" file name is automatically recalled when turning on the E5061A/E5062A.

Variable

	<i>File</i>
Description	File name to save the instrument state (extension ".sta")
Data type	Character string type (String)
Range	254 characters or less
Note	If a file with the same name as the specified file name exists, its contents are overwritten.

Examples

```
Dim StaType As String
SCPI.MMEMORY.STORE.STYPE = "cdst"
SCPI.MMEMORY.STORE.STATE = "a:\state01.sta"
```

```
Dim StaType As String
SCPI.MMEMORY.STORE.STYPE = "cdst"
SCPI.MMEMORY.STORE.STATE = "test/state01.sta"
```

SCPI.MMEMORY.STORE.STYPE

Object type

Property

Syntax

`SCPI.MMEMORY.STORE.STYPE = Param`

`Param = SCPI.MMEMORY.STORE.STYPE`

Description

Selects the contents saved when saving the instrument state into a file with the `SCPI.MMEMORY.STORE.STATE` object.

Variable

	<i>Param</i>
Description	Data of instrument state
Data type	Character string type (String)
Range	Select from the following. <ul style="list-style-type: none"> •"STATE" Specifies the save of the measurement conditions^{*1} only. •"CState" Specifies the save of the measurement conditions^{*1} and the calibration state. •"DState" Specifies the save of the measurement conditions^{*1} and the formatted data array. •"CDState" Specifies the save of the measurement conditions^{*1}, the calibration state, and the formatted data array.
Preset value	"CState"

^{*1}. For information on the measurement conditions to be saved, see Appendix "List of Default Values" in the *E5061A/E5062A User's Guide or Programmer's Guide*.

Examples

```
Dim StaType As String
SCPI.MMEMORY.STORE.STYPE = "cdst"
StaType = SCPI.MMEMORY.STORE.STYPE
```

SCPI.OUTPut.STATE

Object type

Property

Syntax

SCPI.OUTPut.STATE = *Status*

Status = SCPI.OUTPut.STATE

Description

Turns on/off of the stimulus signal output. You cannot perform measurement until you turn on the stimulus signal output.

Variable

	<i>Status</i>
Description	On/off of the stimulus signal output
Data type	Boolean type (Boolean)
Range	Select from the following. •True or -1 Turns on the stimulus signal. •False or 0 Turns off the stimulus signal.
Preset value	True or -1

Examples

```
Dim Outp As Boolean  
SCPI.OUTPut.STATE = True  
Outp = SCPI.OUTPut.STATE
```

Equivalent key

[Sweep Setup] - Power - RF Out

SCPI.SENSE(Ch).AVERage.CLEar

Object type	Method
Syntax	SCPI.SENSE(Ch).AVERage.CLEar
Description	Resets the data count to 0 used for averaging of channels 1 to 4 (<i>Ch</i>). Measurement data before the execution of this object is not used for averaging. (No read)
Variable	For information on the variable (<i>Ch</i>), see Table 7-4, “Variable (Ch),” on page 126.
Examples	SCPI.SENSE(1).AVERage.CLEar
Related objects	SCPI.SENSE(Ch).AVERage.COUNT on page 303 SCPI.SENSE(Ch).AVERage.STATe on page 304
Equivalent key	[Avg] - Averaging Restart

SCPI.SENSE(Ch).AVERage.COUNT

Object type	Property												
Syntax	SCPI.SENSE(Ch).AVERage.COUNT = <i>Value</i> <i>Value</i> = SCPI.SENSE(Ch).AVERage.COUNT												
Description	Sets the averaging factor of channels 1 to 4 (<i>Ch</i>).												
Variable	<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th></th> <th><i>Value</i></th> </tr> </thead> <tbody> <tr> <td>Description</td> <td>Averaging factor</td></tr> <tr> <td>Data type</td> <td>Long integer type (Long)</td></tr> <tr> <td>Range</td> <td>1 to 999</td></tr> <tr> <td>Preset value</td> <td>16</td></tr> <tr> <td>Note</td> <td>If the specified variable is out of the allowable setup range, the minimum value (if the lower limit of the range is not reached) or the maximum value (if the upper limit of the range is exceeded) is set.</td></tr> </tbody> </table>		<i>Value</i>	Description	Averaging factor	Data type	Long integer type (Long)	Range	1 to 999	Preset value	16	Note	If the specified variable is out of the allowable setup range, the minimum value (if the lower limit of the range is not reached) or the maximum value (if the upper limit of the range is exceeded) is set.
	<i>Value</i>												
Description	Averaging factor												
Data type	Long integer type (Long)												
Range	1 to 999												
Preset value	16												
Note	If the specified variable is out of the allowable setup range, the minimum value (if the lower limit of the range is not reached) or the maximum value (if the upper limit of the range is exceeded) is set.												

For information on the variable (*Ch*), see Table 7-4, “Variable (Ch),” on page 126.

SCPI.SENSE(Ch).BANDwidth.RESolution

Object type

Property

Syntax

SCPI.SENSE(*Ch*).BANDwidth.RESolution = *Value*

Value = SCPI.SENSE(*Ch*).BANDwidth.RESolution

Description

Sets the IF bandwidth of channels 1 to 4 (*Ch*).

This object provides the same function as the SCPI.SENSE(*Ch*).BWIDth.RESolution object.

Variable

	<i>Value</i>
Description	IF bandwidth
Data type	Double precision floating point type (Double)
Range	10 to 30000
Preset value	30000
Unit	Hz (hertz)
Resolution	In steps of 1 or 3
Note	If the specified variable is out of the allowable setup range, the minimum value (if the lower limit of the range is not reached) or the maximum value (if the upper limit of the range is exceeded) is set.

For information on the variable (*Ch*), see Table 7-4, “Variable (*Ch*),” on page 126.

Examples

SCPI.SENSE(Ch).CORRection.CLEar

Object type	Property
Syntax	SCPI.SENSE(Ch).CORRection.CLEar
Description	Clears all calibration coefficient and measured standard data for calibration in the specified channel. (No read)
Variable	For information on the variable (Ch), see Table 7-4, “Variable (Ch),” on page 126.
Examples	SCPI. SENSE(1). CORRection. CLEar
Equivalent key	[Cal] - Clear All - OK

COM Object Reference
SCPI.SENSE(Ch).CORRection.COEfficient.DATA

SCPI.SENSE(Ch).CORRection.COEfficient.DATA

Object type

Property

Syntax

Array = SCPI.SENSE(*Ch*).CORRection.COEfficient.DATA(*Str*, *Int1*, *Int2*)

Description

Reads out the calibration coefficient of the specified channel. (Read only)

Variable

	<i>Array</i>
Description	<p>Indicates the array data (corrected data array) of NOP (number of measurement points)×2. Where n is an integer between 1 and NOP.</p> <ul style="list-style-type: none"> • <i>Data(n×2-2)</i> Real part of the data (complex number) at the n-th measurement point. • <i>Data(n×2-1)</i> Imaginary part of the data (complex number) at the n-th measurement point. <p>The index of the array starts from 0.</p>
Data type	Variant type (Variant)

	<i>Param</i>
Description	Calibration type
Data type	Character string type (String)
Range	<p>Select from the following.</p> <ul style="list-style-type: none"> • "ES" Source match • "ER" Reflection tracking • "ED" Directivity • "EL" Load match • "ET" Transmission tracking • "EX" Isolation

	<i>Int1</i>
Description	Indicates the response port
Data type	Long integer type (Long)
Range	1 to 2
Resolution	1
Note	If ES, ER, or ED is used, the response port and the stimulus port must be the same, while EL, ET, or EX is used, the response port and the stimulus port must be different.

	<i>Int2</i>
Description	Indicates the stimulus port

	<i>Int2</i>
Data type	Long integer type (Long)
Range	1 to 2
Resolution	1
Note	If ES, ER, or ED is used, the response port and the stimulus port must be the same, while EL, ET, or EX is used, the response port and the stimulus port must be different.

For information on the variable (*Ch*), see Table 7-4, “Variable (Ch),” on page 126.

Object type

Property

Syntax

SCPI.SENSE(*Ch*).CORRection.COLLect.CKIT.LABel = *Lbl*

Lbl = SCPI.SENSE(*Ch*).CORRection.COLLect.CKIT.LABel

Description

Sets a calibration kit name for the calibration kit selected for channels 1 to 4 (*Ch*).

Variable

	<i>Lbl</i>
Description	Calibration kit name
Data type	Character string type (String)
Range	254 characters or less
Preset value	<p>Varies depending on the calibration kit number.</p> <ul style="list-style-type: none">• 1: "85033E"• 2: "85033D"• 3: "85052D"• 4: "85032F"• 5: "85032B"• 6: "85036B/E"• 7 to 10: "User"

Examples

```
Dim CalLbl As String
SCPI.SENSE(1).CORRection.COLLect.CKIT.LABel = "User 1"
CalLbl = SCPI.SENSE(1).CORRection.COLLect.CKIT.LABel

Property

Syntax

SCPI.SENSE(Ch).CORRection.COLLect.CKIT.ORDer. LOAD(Cpt) = *Value*

Value = SCPI.SENSE(Ch).CORRection.COLLect.CKIT.ORDer. LOAD(Cpt)

Description

For the calibration kit selected for channels 1 to 4 (*Ch*), selects the standard used for the load measurement of the specified port (*Cpt*).

Variable

Table 7-10

Variable (Cpt)

	<i>Cpt</i>
Description	Port number
Data type	Long integer type (Long)
Range	1 to 2
Note	If the specified variable is out of the allowable setup range, an error occurs when executed.

NOTE

Since the variable (*Cpt*) has no preset value, you cannot omit it. If you omit the variable (*Cpt*), an error occurs when executed.

	<i>Value</i>
Description	Standard number
Data type	Long integer type (Long)
Range	1 to 21
Note	If the specified variable is out of the allowable setup range, an error occurs when executed.

For information on the variable (*Ch*), see Table 7-4, “Variable (Ch),” on page 126.

Examples

```
Dim StanLoad As Long
SCPI.SENSE(1).CORRection.COLLect.CKIT.ORDer. LOAD(1) = 10
StanLoad = SCPI.SENSE(1).CORRection.COLLect.CKIT.ORDer. LOAD(1)
```

Object type

Property

Syntax

SCPI.SENSE(Ch).CORRection.COLLect.CKIT.ORDer.SHORt(Cpt) = *Value**Value* = SCPI.SENSE(Ch).CORRection.COLLect.CKIT.ORDer.SHORt(Cpt)

Description

For the calibration kit selected for channels 1 to 4 (*Ch*), selects the standard used for the short measurement of the specified port (*Cpt*).

Variable

	<i>Value</i>
Description	Standard number
Data type	Long integer type (Long)
Range	1 to 21
Note	If the specified variable is out of the allowable setup range, an error occurs when executed.

For information on the variable (*Ch*) and the variable (*Cpt*), see Table 7-4, “Variable (Ch),” on page 126 and Table 7-10, “Variable (Cpt),” on page 315, respectively.

NOTE

Since the variable (*Cpt*) has no preset value, you cannot omit it. If you omit the variable (*Cpt*), an error occurs when executed.

Examples

```
Dim StanShor As Long
SCPI.SENSE(1).CORRection.COLLect.CKIT.ORDer.SHORt(1) = 10
StanShor = SCPI.SENSE(1).CORRection.COLLect.CKIT.ORDer.SHORt(1)

SCPI.SENSE(Ch).CORRection.COLLect.CKIT.ORDer. THRU(Cpt_m,Cpt_n)

Object type

Property

Syntax

SCPI.SENSE(*Ch*).CORRection.COLLect.CKIT.ORDer. THRU(*Cpt_m,Cpt_n*) = *Value**Value* = SCPI.SENSE(*Ch*).CORRection.COLLect.CKIT.ORDer. THRU(*Cpt_m,Cpt_n*)

Description

For the calibration kit selected for channels 1 to 4 (*Ch*), selects the standard used for the thru measurement between the specified 2 ports (*Cpt_m* and *Cpt_n*).

Variable

<i>Cpt_m, Cpt_n</i>	
Description	Port number
Data type	Long integer type (Long)
Range	1 to 2
Note	If the specified variable is out of the allowable setup range, an error occurs when executed.

NOTE

Since the variables (*Cpt_m* and *Cpt_n*) have no preset value, you cannot omit them. If you omit the variables (*Cpt_m* and *Cpt_n*) or if you specify the same port number to 2 port numbers, an error occurs when executed. Notice that when you specify 2 ports with the variables (*Cpt_m* and *Cpt_n*), the order of the 2 port numbers is arbitrary.

<i>Value</i>	
Description	Standard number
Data type	Long integer type (Long)
Range	1 to 21
Note	If the specified variable is out of the allowable setup range, an error occurs when executed.

For information on the variable (*Ch*), see Table 7-4, “Variable (Ch),” on page 126.

Examples

```
Dim StanThru As Long
SCPI.SENSE(1).CORRection.COLLect.CKIT.ORDer. THRU(1,2) = 10
StanThru = SCPI.SENSE(1).CORRection.COLLect.CKIT.ORDer. THRU(1,2)

Property

Syntax

SCPI.SENSE(*Ch*).CORRection.COLLect.CKIT.STAN(*Std*).LOSS = *Value*

Value = SCPI.SENSE(*Ch*).CORRection.COLLect.CKIT.STAN(*Std*).LOSS

Description

For the calibration kit selected for channels 1 to 4 (*Ch*), sets the value of the offset loss of the standards 1 to 21 (*Std*).

Variable

	<i>Value</i>
Description	Offset loss
Data type	Double precision floating point type (Double)
Range	-1E18 to 1E18
Preset value	Varies depending on the specified calibration kit and standard.
Unit	Ω/s (ohm/second)
Note	If the specified variable is out of the allowable setup range, the minimum value (if the lower limit of the range is not reached) or the maximum value (if the upper limit of the range is exceeded) is set.

For information on the variable (*Ch*) and the variable (*Std*), see Table 7-4, “Variable (Ch),” on page 126 and Table 7-11, “Variable (Std),” on page 320, respectively.

Examples

```
Dim StanLoss As Double
SCPI.SENSE(1).CORRection.COLLect.CKIT.STAN(5).LOSS = 12.3
StanLoss = SCPI.SENSE(1).CORRection.COLLect.CKIT.STAN(5).LOSS

SCPI.SENSE(Ch).CORRection.COLLect.ECAL.ERESponse

Object type

Property

Syntax

SCPI.SENSE(*Ch*).CORRection.COLLect.ECAL.ERES = *Eports*

Description

Executes enhanced response calibration of channels 1 to 4 (*Ch*) using the ECal (Electronic Calibration) module.

If you execute this object when the ECal module is not connected, an error occurs when executed and the object is ignored. (No read)

Variable

	<i>Eports</i>
Description	<p>Indicates 2-element array data (port number).</p> <ul style="list-style-type: none"> • <i>EPorts(0)</i> Specifies the response port. • <i>EPorts(1)</i> Specifies the stimulus port. <p>The index of the array starts from 0.</p>
Data type	Variant type (Variant)
Range	1 to 4
Resolution	1
Note	If the specified variable is out of the allowable setup range, an error occurs when executed. If you specify the same port number to 2 port numbers, an error occurs when executed. the order of the 2 port numbers to be specified is arbitrary.

For information on the variable (*Ch*), see Table 7-4, “Variable (*Ch*),” on page 126.

Examples

```
SCPI.SENSE(1).CORRection.COLLect.ECAL.SOLT2 = Array(1,2)
```

```
Dim ERESPort(1) As Variant
ERESPорт(0) = 1
ERESPорт(1) = 2

Unit	Ω (ohm)
Resolution	0.001
Note	If the specified variable is out of the allowable setup range, the minimum value (if the lower limit of the range is not reached) or the maximum value (if the upper limit of the range is exceeded) is set.

Examples

```
Dim SysZ0 As Double
SCPI.SENSE.CORRection.IMPedance.INPUT.MAGNitude = 75
SysZ0 = SCPI.SENSE.CORRection.IMPedance.INPUT.MAGNitude
```

Equivalent key

[Cal] - Set Z0

SCPI.SENSE(Ch).CORRection.PROPerty

Object type

Property

Syntax

SCPI.SENSE(*Ch*).CORRection.PROPerty = *Status*

Status = SCPI.SENSE(*Ch*).CORRection.PROPerty

Description

For the active trace of channels 1 to 4 (*Ch*), turns ON/OFF the display of the calibration property.

Variable

	<i>Status</i>
Description	ON/OFF of the display of the calibration property
Data type	Boolean type (Boolean)
Range	Select from the following. •True or -1 Turns ON the display of the calibration property. •False or 0 Turns OFF the display of the calibration property.
Preset value	False or 0

For information on the variable (*Ch*), see Table 7-4, “Variable (Ch),” on page 126.

Examples

```
Dim CalProp As Boolean
SCPI.SENSE(1).CORRection.PROPerty = True
CalProp = SCPI.SENSE(1).CORRection.PROPerty
```

Equivalent key

COM Object Reference
SCPI.SENSE(Ch).CORRection.RVELocity.COAX

SCPI.SENSE(Ch).CORRection.RVELocity.COAX

Object type

Property

Syntax

SCPI.SENSE(*Ch*).CORRection.RVELocity.COAX = *Value*

Value = SCPI.SENSE(*Ch*).CORRection.RVELocity.COAX

Description

For channels 1 to 4 (*Ch*), sets the velocity factor.

Variable

	<i>Value</i>
Description	Velocity factor
Data type	Double precision floating point type (Double)
Range	0.01 to 10
Preset value	1
Note	If the specified variable is out of the allowable setup range, the minimum value (if the lower limit of the range is not reached) or the maximum value (if the upper limit of the range is exceeded) is set.

For information on the variable (*Ch*), see Table 7-4, “Variable (Ch),” on page 126.

Examples

```
Dim Vel As Double  
SCPI.SENSE(1).CORRection.RVELocity.COAX = 0.5  
Vel = SCPI.SENSE(1).CORRection.RVELocity.COAX
```

Equivalent key

SCPI.SENSE(Ch).CORRection.STATE

Object type

Property

Syntax

SCPI.SENSE(*Ch*).CORRection.STATE = *Status*

Status = SCPI.SENSE(*Ch*).CORRection.STATE

Description

For the active trace of channels 1 to 4 (*Ch*), turns ON/OFF the error correction.

Variable

	<i>Status</i>
Description	ON/OFF of the error correction
Data type	Boolean type (Boolean)
Range	Select from the following. •True or -1 Turns ON the error correction. •False or 0 Turns OFF the error correction.
Preset value	False or 0

Examples

```
Dim Corr As Boolean
SCPI.SENSE(1).CORRection.STATE = True
Corr = SCPI.SENSE(1).CORRection.STATE
```

Equivalent key

[Cal] - Correction

SCPI.SENSE(Ch).CORRection.TYPE(Tr)

Object type	Properties
Syntax	<i>Data</i> = SCPI.SENSE(<i>Ch</i>).CORRection.TYPE(<i>Tr</i>)
Description	For traces 1 to 4 (<i>Tr</i>) of channels 1 to 4 (<i>Ch</i>), reads out the information (calibration type, port numbers) of the applied calibration coefficients for the actual error correction. (Read only)
Variable	

	<i>Data</i>
Description	<p>Indicates 3 array data items (the calibration type and the port information to which the calibration is applied).</p> <ul style="list-style-type: none"> • <i>Data(0)</i> The calibration type applied. For detail, refer to the Range section. • <i>Data(1)</i> The port number to which the calibration is applied (0 when the calibration type is NONE). • <i>Data(2)</i> The port number to which the calibration is applied (0 when the calibration type is not SOLT2, or ERES). <p>The array index starts from 0.</p>
Range	<p>One of the following is read out as <i>Data(0)</i>.</p> <ul style="list-style-type: none"> • "ERES" The enhanced response calibration is applied. • "NONE" Nothing is applied. • "RESP0" The response calibration (open) is applied. • "RESPS" The response calibration (short) is applied. • "RESPT" The response calibration (thru) is applied. • "SOLT1" The full 1-port calibration is applied. • "SOLT2" The full 2-port calibration is applied.
Data type	Variant type (Variant)

For information on the variable (*Ch*) and the variable (*Tr*), see Table 7-4, “Variable (Ch),” on page 126 and Table 7-5, “Variable (Tr),” on page 128, respectively.

Examples	<pre>Dim CalType As Variant CalType = SCPI.SENSE(1).CORRection.TYPE(1)</pre>

SCPI.SENSE(Ch).FREQuency.CENTer

Object type

Property

Syntax

SCPI.SENSE(*Ch*).FREQuency.CENTer = *Value*

Value = SCPI.SENSE(*Ch*).FREQuency.CENTer

Description

Sets the center value of the sweep range of channels 1 to 4 (*Ch*).

Variable

	<i>Value</i>
Description	Center value
Data type	Double precision floating point type (Double)
Range	3E5 to 3E9
Preset value	4.25015E9
Unit	Hz (hertz)
Resolution	0.5 or 1
Note	If the specified variable is out of the allowable setup range, the minimum value (if the lower limit of the range is not reached) or the maximum value (if the upper limit of the range is exceeded) is set.

For information on the variable (*Ch*), see Table 7-4, “Variable (Ch),” on page 126.

Examples

```
Dim Cntr As Double
SCPI.SENSE(1).FREQuency.CENTer = 2E9
Cntr = SCPI.SENSE(1).FREQuency.CENTer
```

	<i>Value</i>
Description	Upper limit of the number of traces.
Data type	Long integer type (Long)

Examples

```
Dim MaxTrac As Long  
MaxTrac = SCPI.SERVICE.CHANnel.TRACe.COUNT
```

Equivalent key

No equivalent key is available on the front panel.

SCPI.SERVICE.PORT.COUNT

Object type

Property

Syntax

Value = SCPI.SERVICE.PORT.COUNT

Description

Reads out the number of ports of the E5061A/E5062A. (Read only)

Variable

	<i>Value</i>
Description	Number of ports
Data type	Long integer type (Long)

Examples

```
Dim MaxPort As Long  
MaxPort = SCPI.SERVICE.PORT.COUNT
```

Equivalent key

No equivalent key is available on the front panel.

COM Object Reference
SCPI.SOURce(*Ch*).POWer.ATTenuation.DATA

SCPI.SOURce(*Ch*).POWer.ATTenuation.DATA

Object type	Property
Syntax	SCPI.SOURce(<i>Ch</i>).POWer.ATTenuation.DATA = <i>Value</i> <i>Value</i> = SCPI.SOURce(<i>Ch</i>).POWer.ATTenuation.DATA
Description	Selects the attenuator used for channels 1 to 4 (<i>Ch</i>). The power ranges are determined depending on the attenuator to be used.

NOTE This object is available only when extended power range function is installed.

Variable

	<i>Value</i>
Description	Power ranges Setting -5 to +10[dB] 0 -15 to 0 [dB] 10 -25 to -10 [dB] 20 -35 to -20 [dB] 30 -45 to -30 [dB] 40
Data type	Long integer type (Long)
Range	0 to 40
Preset value	0
Unit	dB
Resolution	10
Note	If the specified variable is out of the allowable setup range, the minimum value (if the lower limit of the range is not reached) or the maximum value (if the upper limit of the range is exceeded) is set.

For information on the variable (*Ch*), see Table 7-4, “Variable (*Ch*)”, on page 126.

Examples

```
Dim Att As Long
SCPI.SOURCE(1).POWer.ATTenuation.DATA = 10
Att = SCPI.SOURCE(1).POWer.ATTenuation.DATA
```

Object type

Property

Syntax

SCPI.SOURce(*Ch*).POWer.PORT.COUPLE = *Status*

Status = SCPI.SOURce(*Ch*).POWer.PORT.COUPLE

Description

Sets whether to output the same power level for each port of channels 1 to 4 (*Ch*). When the power slope feature is on, the same power level is always outputted to all ports regardless of this setting because different power levels cannot be outputted for each port.

Variable

	<i>Status</i>
Description	Turning on/off the coupling between ports for the power level output
Data type	Boolean type (Boolean)
Range	Select from the following. •True or -1 Outputs the same power level to individual ports. •False or 0 Outputs different power levels to individual ports.
Preset value	True or -1

For information on the variable (*Ch*), refer to Table 7-4, “Variable (*Ch*),” on page 126.

Variable

	<i>Value</i>
Description	The value of the positive transition filter of the Questionable Bandwidth Limit Status Register.
Data type	Long integer type (Long)
Range	0 to 65535
Preset value	Varies depending on the upper limit setting of the number of channels/traces.
Note	The bit 5 to 15 can not be set to 1.

Examples

```
Dim Stat As Long
SCPI.STATUS.QUESTIONable.BLIMit.PTRansition = 6
Stat = SCPI.STATUS.QUESTIONable.BLIMit.PTRansition
```

Description	Generates a beep for the notification of the completion of the operation. (No read)
Examples	SCPI.SYSTem.BEEPer.COMplete.IMMEDIATE
Related objects	SCPI.SYSTem.BEEPer.COMplete.STATE on page 416 SCPI.SYSTem.BEEPer.WARNING.IMMEDIATE on page 417
Equivalent key	[System] - Misc Setup - Beeper - Test Beep Complete

SCPI.SYSTem.BEEPer.COMplete.STATE

Object type	Property
Syntax	SCPI.SYSTem.BEEPer.COMplete.STATE = <i>Status</i> <i>Status</i> = SCPI.SYSTem.BEEPer.COMplete.STATE
Description	Turns ON/OFF the beeper for the notification of the completion of the operation.
Variable	

	<i>Status</i>
Description	ON/OFF of the beeper for the notification of the completion of the operation
Data type	Boolean type (Boolean)
Range	Select from the following. <ul style="list-style-type: none">•True or -1 Turns ON the beeper for the notification of the completion of the operation.•False or 0 Turns OFF the beeper for the notification of the completion of the operation.
Preset value	True or -1

Examples	Dim BeepComp As Boolean SCPI.SYSTem.BEEPer.COMplete.STATE = False BeepComp = SCPI.SYSTem.BEEPer.COMplete.STATE
Related objects	SCPI.SYSTem.BEEPer.COMplete.IMMEDIATE on page 416 SCPI.SYSTem.BEEPer.WARNING.STATE on page 417
Equivalent key	[System] - Misc Setup - Beeper - Beep Complete

SCPI.SYSTem.BEEPer.WARNing.IMMEDIATE

Object type	Method
Syntax	SCPI.SYSTem.BEEPer.WARNing.IMMEDIATE
Description	Generates a beep for the notification of warning/limit test result. (No read)
Examples	SCPI.SYSTem.BEEPer.WARNing.IMMEDIATE
Related objects	SCPI.SYSTem.BEEPer.WARNing.STATE on page 417 SCPI.SYSTem.BEEPer.COMplete.IMMEDIATE on page 416
Equivalent key	[System] - Misc Setup - Beeper - Test Beep Warning

SCPI.SYSTem.BEEPer.WARNing.STATE

Object type	Property
Syntax	SCPI.SYSTem.BEEPer.WARNing.STATE = <i>Status</i> <i>Status</i> = SCPI.SYSTem.BEEPer.WARNing.STATE
Description	Turns ON/OFF the beeper for the notification of warning/limit test result.
Variable	

	<i>Status</i>
Description	ON/OFF of the beeper for the notification of warning/limit test result
Data type	Boolean type (Boolean)
Range	Select from the following. •True or -1 Turns ON the beeper for the notification of warning/limit test result. •False or 0 Turns OFF the beeper for the notification of warning/limit test result.
Preset value	True or -1

Examples	Dim BeepWarn As Boolean SCPI.SYSTem.BEEPer.WARNing.STATE = False BeepWarn = SCPI.SYSTem.BEEPer.WARNing.STATE
Related objects	SCPI.SYSTem.BEEPer.WARNing.IMMEDIATE on page 417 SCPI.SYSTem.BEEPer.COMplete.STATE on page 416
Equivalent key	[System] - Misc Setup - Beeper - Beep Warning

SCPI.SYSTem.DATE

Object type	Property
Syntax	$\text{SCPI.SYSTem.DATE} = \text{Data}$ $\text{Data} = \text{SCPI.SYSTem.DATE}$
Description	Sets the date of the clock built in the E5061A/E5062A.
Variable	

	<i>Data</i>
Description	<p>Indicates 3-element array data (date of the built-in clock).</p> <ul style="list-style-type: none"> • $\text{Data}(0)$ Sets year. • $\text{Data}(1)$ Sets month. • $\text{Data}(2)$ Sets day. <p>The index of the array starts from 0.</p>
Data type	Variant type (Variant)
Range	<ul style="list-style-type: none"> • $\text{Data}(0)$ 1980 to 2099 • $\text{Data}(1)$ 1 to 12 • $\text{Data}(2)$ 1 to 31
Resolution	1
Note	If the specified variable is out of the allowable setup range, the minimum value (if the lower limit of the range is not reached) or the maximum value (if the upper limit of the range is exceeded) is set.

Examples

```

Dim Day As Variant
SCPI.SYSTem.DATE = Array(2001,12,24)
Day = SCPI.SYSTem.DATE

```

```

Dim Day(2) As Variant
Dim Ref As Variant
Day(0) = 2001
Day(1) = 12
Day(2) = 24
SCPI.SYSTem.DATE = Day
Ref = SCPI.SYSTem.DATE

```

SCPI.SYSTem.ERRor

Object type

Property

Syntax

Err = SCPI.SYSTem.ERRor

Description

Reads out the oldest error of the errors stored in the error queue of the E5061A/E5062A. The read-out error is deleted from the error queue. The size of the error queue is 100.

Executing the SCPI.IEEE4882.CLS object clears the errors stored in the error queue.
(Read only)

NOTE

This object can not return an error that occurs by the manual operation or the SCPI command used in controlling the E5061A/E5062A from the external controller.

Variable

	<i>Err</i>
Description	Indicates 2-element array data (for error). • <i>Err(0)</i> Error number • <i>Err(1)</i> Error message The index of the array starts from 0.
Data type	Variant type (Variant)
Note	If no error is stored in the error queue, 0 and "No error" are read out as the error number and the error message.

Examples

```
Dim Err As Variant  
Err = SCPI.SYSTem.ERRor
```

Related objects

Equivalent key

No equivalent key is available on the front panel.

SCPI.SYSTem.KLOCK.KBD

Object type

Property

Syntax

SCPI.SYSTem.KLOCK.KBD = *Status*

Status = SCPI.SYSTem.KLOCK.KBD

Description

Sets whether to lock the operation of the front panel (key and rotary knob) and keyboard.

Variable

	<i>Status</i>
Description	ON/OFF of lock
Data type	Boolean type (Boolean)
Range	Select from the following. •True or -1 Specifies lock. •False or 0 Specifies unlock.
Preset value	False or 0

Examples

```
Dim FKLock As Boolean  
SCPI.SYSTem.KLOCK.KBD = True  
FKLock = SCPI.SYSTem.KLOCK.KBD
```

Related objects

SCPI.SYSTem.KLOCK.MOUSE on page 421

Equivalent key

[System] - Misc Setup - Front Panel & Keyboard Lock

SCPI.SYSTem.KLOCK.MOUSE

Object type	Property
Syntax	<pre>SCPI.SYSTem.KLOCK.MOUSE = <i>Status</i> <i>Status</i> = SCPI.SYSTem.KLOCK.MOUSE</pre>
Description	Sets whether to lock the operation of the mouse and touch screen.
Variable	

	<i>Status</i>
Description	ON/OFF of lock
Data type	Boolean type (Boolean)
Range	Select from the following. <ul style="list-style-type: none"> •True or -1 Specifies lock. •False or 0 Specifies unlock.
Preset value	False or 0

Examples	<pre>Dim MTLock As Boolean SCPI.SYSTem.KLOCK.MOUSE = True MTLock = SCPI.SYSTem.KLOCK.MOUSE</pre>
Related objects	SCPI.SYSTem.KLOCK.KBD on page 420
Equivalent key	[System] - Key Lock - Mouse Lock

SCPI.SYSTem.POFF

Object type	Method
Syntax	SCPI.SYSTem.POFF
Description	Turns OFF the E5061A/E5062A. (No read)
Examples	SCPI.SYSTem.POFF
Equivalent key	Standby switch

SCPI.SYSTem.PRESet

Object type	Method
Syntax	<code>SCPI.SYSTem.PRESet</code>
Description	Presets the setting state of the E5061A/E5062A. There is the following difference from the setting state preset with the SCPI.IEEE4882.RST object. For details, see Appendix “List of Default Values” in the <i>E5061A/E5062A User’s Guide</i> . (No read) <ul style="list-style-type: none">• The continuous startup mode (see the SCPI.INITiate(Ch).CONTinuous object) of channel 1 is set to ON.
Examples	<code>SCPI.SYSTem.PRESet</code>
Related objects	SCPI.IEEE4882.RST on page 277 SCPI.SYSTem.UPReset on page 426
Equivalent key	[Preset] - OK

SCPI.SYSTem.SEcurity.LEVel

Object type Property

Syntax `SCPI.SYSTem.SEcurity.LEVel = Param`

`Param` = `SCPI.SYSTem.SEcurity.LEVel`

Description Sets/Reads the security level.

Variable

	<i>Param</i>
Description	The security level.
Data type	Character string type (String)
Range	Select from the following. •"NON" Specifies OFF to the security level. •"LOW" Specifies LOW level to the security level. •"HIGH" Specifies HIGH level to the security level.
Preset value	"NON"
Note	When the setting is LOW, it is able to change to NON or HIGH. But when this setting is HIGH, it is not able to change NON or LOW. The setting can be turned NON by executing the preset or recalling when the setting of frequency blank function is HIGH. Even if the setting is LOW and HIGH, the command that reads out the frequency is not influenced.

Examples

```
Dim SecLev As String
SCPI.SYSTem.SEcurity.LEVel = "LOW"
SecLev = SCPI.SYSTem.SEcurity.LEVel
```

Equivalent key

[System] - Service Menu - Security Level - None|Low|High

SCPI.SYSTem.SERVICE

Object type Property

Syntax *Status* = SCPI.SYSTem.SERVICE

Description Reads out whether to be in the service mode. (Read only)

Variable

	<i>Status</i>
Description	Whether to be in the service mode
Data type	Boolean type (Boolean)
Range	Select from the following. •True or -1 In the service mode. •False or 0 Not in the service mode.

Examples Dim SvMode As Boolean
 SvMode = SCPI.SYSTem.SERVICE

Equivalent key Displayed on the instrument status bar (at the bottom of the LCD display).

SCPI.SYSTem.TIME

Object type	Property
Syntax	SCPI.SYSTem.TIME = <i>Data</i> <i>Data</i> = SCPI.SYSTem.TIME
Description	Sets the time of the clock built in the E5061A/E5062A.
Variable	

	<i>Data</i>
Description	Indicates 3-element array data (time of the built-in clock). • <i>Data(0)</i> Sets hour (24-hour basis) • <i>Data(1)</i> Sets minute. • <i>Data(2)</i> Sets second. The index of the array starts from 0.
Data type	Variant type (Variant)
Range	• <i>Data(0)</i> 0 to 23 • <i>Data(1)</i> 0 to 59 • <i>Data(2)</i> 0 to 59
Resolution	1
Note	If the specified variable is out of the allowable setup range, the minimum value (if the lower limit of the range is not reached) or the maximum value (if the upper limit of the range is exceeded) is set.

Examples	<pre>Dim Time As Variant SCPI.SYSTem.TIME = Array(21,30,0) Time = SCPI.SYSTem.TIME Dim Time(2) As Variant Dim Ref As Variant Time(0) = 21 Time(1) = 30 Time(2) = 0 SCPI.SYSTem.TIME = Time Ref = SCPI.SYSTem.TIME</pre>
----------	--

Related objects	SCPI.SYSTem.DATE on page 418 SCPI.DISPlay.CLOCK on page 233
Equivalent key	[System] - Misc Setup - Clock Setup - Set Date and Time

SCPI.SYSTem.UPReset

Object type	Method
Syntax	<code>SCPI.SYSTem.UPReset</code>
Description	<p>Executes the user-specified preset.</p> <p>The command is executed regardless of the preset operation mode.</p> <p>If the user-specified preset file (D:\UserPreset.sta) does not exist, a warning message is displayed, and “SCPI.SYSTem.PRESet” is executed. (No read)</p>
Examples	<code>SCPI.SYSTem.UPReset</code>
Related objects	SCPI.IEEE4882.RST on page 277 SCPI.SYSTem.PRESet on page 422
Equivalent key	[Preset] - OK

SCPI.TRIGger.SEQuence.IMMEDIATE

Object type	Method
Syntax	<code>SCPI.TRIGger.SEQuence.IMMEDIATE</code>
Description	<p>Regardless of the setting of the trigger mode, generates a trigger immediately and executes a measurement.</p> <p>There is the following difference from the trigger with the <code>SCPI.TRIGger.SEQuence.SINGLE</code> object.</p> <ul style="list-style-type: none">• The execution of the object finishes at the time of a trigger. <p>If you execute this object when the trigger system is not in the trigger wait state (trigger event detection state), an error occurs when executed and the object is ignored.</p> <p>For details about the trigger system, see Section “Trigger System” in the <i>E5061A/E5062A Programmer’s Guide</i>. (No read)</p>
Examples	<pre>SCPI.TRIGger.SEQuence.SOURce = "bus" SCPI.INITiate(1).CONTinuous = True SCPI.TRIGger.SEQuence.IMMEDIATE</pre>
Related objects	SCPI.TRIGger.SEQuence.IMMEDIATE on page 427
Equivalent key	No equivalent key is available on the front panel.

SCPI.TRIGger.SEQuence.SINGle

Object type	Method
Syntax	SCPI.TRIGger.SEQuence.SINGle
Description	<p>Regardless of the setting of the trigger mode, generates a trigger immediately and executes a measurement.</p> <p>There is the following difference from the trigger with the SCPI.TRIGger.SEQuence.IMMEDIATE object.</p> <ul style="list-style-type: none">The execution of the object finishes when the measurement (all of the sweep) initiated with this object is complete. In other words, you can wait for the end of the measurement using the SCPI.IEEE4882.OPC object. <p>If you execute this object when the trigger system is not in the trigger wait state (trigger event detection state), an error occurs when executed and the object is ignored.</p> <p>For details about the trigger system, see Section “Trigger System” in the <i>E5061A/E5062A Programmer’s Guide</i>. (No read)</p>
Examples	<pre>Dim Dmy As Long SCPI.TRIGger.SEQuence.SOURce = "bus" SCPI.INITiate(1).CONTinuous = True SCPI.TRIGger.SEQuence.SINGLE Dmy = SCPI.IEEE4882.OPC</pre>
Related objects	<p>SCPI.TRIGger.SEQuence.IMMEDIATE on page 427</p> <p>SCPI.IEEE4882.OPC on page 276</p>
Equivalent key	No equivalent key is available on the front panel.

SCPI.TRIGger.SEQuence.SOURce

Object type

Property

Syntax

SCPI.TRIGger.SEQuence.SOURce = *Param*

Param = SCPI.TRIGger.SEQuence.SOURce

Description

Selects the trigger source from the following 4 types.

Internal trigger Uses the internal trigger to generate continuous triggers automatically.

External trigger Generates a trigger when the trigger signal is inputted externally via the Ext Trig connector or the handler interface.

Manual trigger Generates a trigger when the key operation of **[Trigger] - Trigger** is executed from the front panel.

Bus trigger Generates a trigger when the SCPI.IEEE4882.TRG object is executed.

When you change the trigger source during sweep, the sweep is aborted.

Variable

	<i>Param</i>
Description	Trigger source
Data type	Character string type (String)
Range	Select from the following. •"INTernal" Specifies internal trigger. •"EXTernal" Specifies external trigger. •"MANual" Specifies manual trigger. •"BUS" Specifies bus trigger.
Preset value	"INTernal"

Examples

```
Dim TrigSour As String
SCPI.TRIGger.SEQuence.SOURce = "bus"
TrigSour = SCPI.TRIGger.SEQuence.SOURce
```

Equivalent key

[Trigger] - Trigger Source - Internal|External|Manual|Bus

Waveform Analysis Library

This chapter describes how to use the ripple analysis library and the procedures in the ripple analysis library.

Ripple Analysis Library

By combining the COM objects provided for the E5061A/E5062A and the ripple analysis library, you can easily perform the ripple analysis of waveforms.

Flow of Programming Using the Ripple Analysis Library

Below table shows the flow of program development using the ripple analysis library. First, set up the analysis range and peak definition to use the procedures for ripple analysis.

STEP 1. Condition setting before using the ripple analysis library

- Specifying the analysis range
- Setting the peak definition

STEP 2. Using the ripple analysis library

Condition Setting Before Using the Ripple Analysis Library

Since the analysis conditions are not specified in the ripple analysis library, before using the procedure for ripple analysis, set up the analysis range and the peak definition using COM objects.

Specifying the Analysis Range

Use the following COM objects to specify the analysis range for ripple analysis. For more information on each object, see Chapter 7, “COM Object Reference.”.

- SCPI.CALCulate(Ch).SELected.FUNCtion.DOMain.START on page 148
- SCPI.CALCulate(Ch).SELected.FUNCtion.DOMain.STOP on page 150
- SCPI.CALCulate(Ch).SELected.FUNCtion.DOMain.STATE on page 149
- SCPI.CALCulate(Ch).SELected.FUNCtion.DOMain.COUPLE on page 147

Setting the Peak Definition

Use the following COM objects to set up the peak definition for ripple analysis. For more information on each object, see Chapter 7, “COM Object Reference.”.

- SCPI.CALCulate(Ch).SELected.FUNCtion.PEXcursion on page 152
- SCPI.CALCulate(Ch).SELected.FUNCtion.PPOLarity on page 154

List of the Ripple Analysis Library

Use the provided procedures for ripple analysis to analyze the ripple of waveforms and output the result. All procedures perform analysis only within the stimulus range for the specified channel.

For more information on the E5061A/E5062A ripple analysis library, refer to **Procedure Reference** on page 435.

<ul style="list-style-type: none">Returns the difference between the positive peak detected first when searched from the left edge toward the right edge and its right adjacent negative peak. FirstRightGap(Chan) on page 437

List of ripple analysis library

- Returns the difference between the positive peak detected first when searched from the right edge toward the left edge and its left adjacent negative peak.

FirstLeftGap(Chan) on page 435

- Returns the difference of the stimulus value between the positive peak detected first when searched from the left edge toward the right edge and its right adjacent negative peak.

FirstRightInterval(Chan) on page 438

- Returns the difference of the stimulus value between the positive peak detected first when searched from the left edge toward the right edge and its left adjacent negative peak.

FirstLeftInterval(Chan) on page 436

Simple Use Example

Here is a simple sample program using the ripple analysis procedures.

```
Sub Sample()  
  
    Dim Val As Double  
  
    SCPI.CALCulate(1).SElected.FUNCTION.PEXCursion = 1.5          (1)  
    SCPI.CALCulate(1).SElected.FUNCTION.PPOLarity = "BOTH"        (2)  
    SCPI.CALCulate(1).SElected.FUNCTION.DOMain.START = 935E6       (3)  
    SCPI.CALCulate(1).SElected.FUNCTION.DOMain.STOP = 960E6        (3)  
    SCPI.CALCulate(1).SElected.FUNCTION.DOMain.STATE = True         (3)  
    .  
    .  
    Val = MaxPeakToPeak(1)                                         (4)  
  
End Sub
```

Let us break down the code into a number of blocks and see what they do.

1. Defines a variable Val as Double.
2. Sets the lower limit of the peak excursion value and polarity for the peak search to 1.5 and both of positive peak and negative peak, respectively.
3. Sets the analysis range for channel 1 to 935 MHz to 960 MHz.
4. For channel 1, substitutes the return value from the MaxPeakToPeak function (procedure) in the ripple analysis library to the Val variable.

Procedure Reference

This section describes the procedures in the ripple analysis library provided by the E5061A/E5062A in alphabetical order.

FirstLeftGap(*Chan*)

Syntax

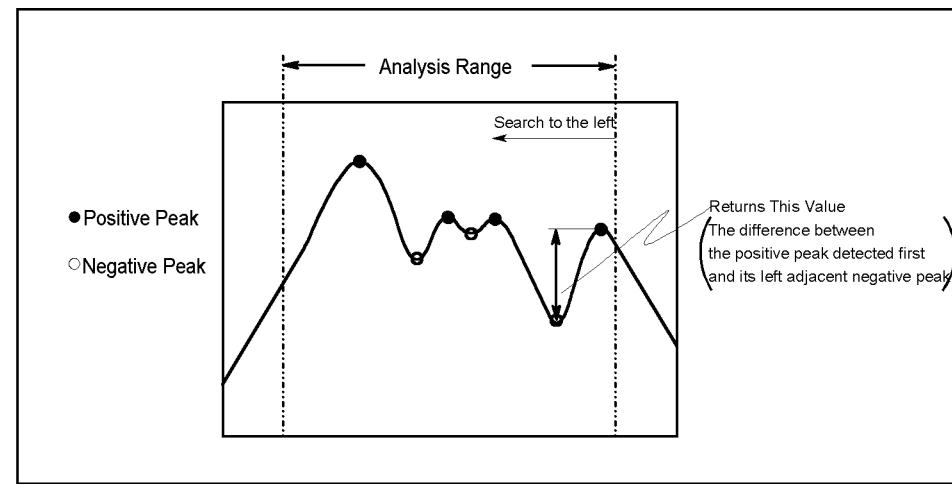

Value = FirstLeftGap(*Chan*)

Description

Returns the response difference between the positive peak detected first when searched from the right edge toward the left edge within the analysis range and its left adjacent negative peak.

Figure 8-1

FirstLeftGap

Variable

	<i>Chan</i>
Description	Specifies the channel number.
Data type	Integer type (Integer)
Range	1 to 4
Note	If the specified variable is out of the allowable setup range, an error occurs when executed.

Return value

	<i>Value</i>
Description	Returns the response difference between the positive peak detected first when searched from the right edge toward the left edge within the analysis range and its left adjacent negative peak.
Data type	Double precision floating point type (Double)
Note	If no applicable point is detected, 0 is returned.

Example of use

```
Dim Value As Double
Value = FirstLeftGap(1)
MsgBox "First Left Gap =" & Value
```

FirstLeftInterval(*Chan*)

Syntax

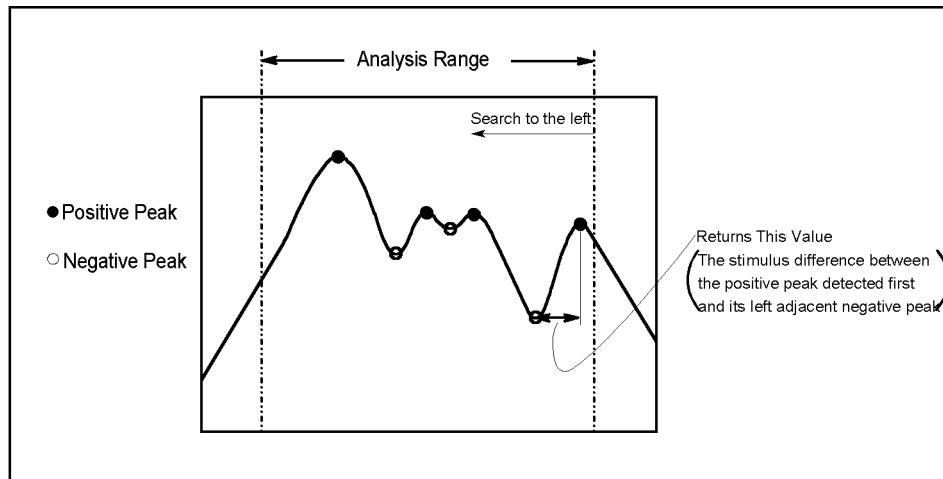

Value = FirstLeftInterval(*Chan*)

Description

Returns the stimulus difference between the positive peak detected first when searched from the right edge toward the left edge within the analysis range and its left adjacent negative peak.

Figure 8-2

FirstLeftInterval

Variable

	<i>Chan</i>
Description	Specifies the channel number.
Data type	Integer type (Integer)
Range	1 to 4
Note	If the specified variable is out of the allowable setup range, an error occurs when executed.

Return value

	<i>Value</i>
Description	Returns the stimulus difference between the positive peak detected first when searched from the right edge toward the left edge within the analysis range and its left adjacent negative peak.
Data type	Double precision floating point type (Double)
Note	If no applicable point is detected, 0 is returned.

Example of use

```
Dim Value As Double
Value = FirstLeftInterval(1)
MsgBox "First Left Interval =" & Value
```

FirstRightGap(*Chan*)

Syntax

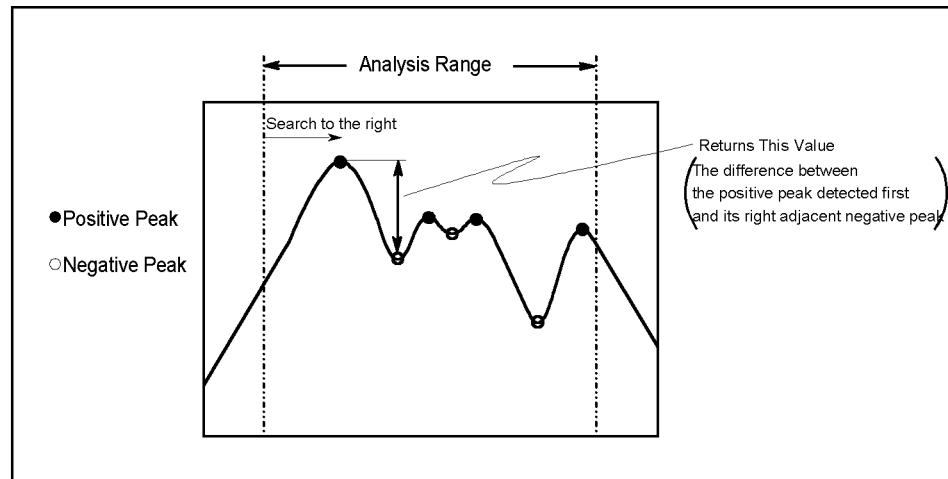

Value = FirstRightGap(*Chan*)

Description

Returns the response difference between the positive peak detected first when searched from the left edge toward the right edge within the analysis range and its right adjacent negative peak.

Figure 8-3

FirstRightGap

Variable

	<i>Chan</i>
Description	Specifies the channel number.
Data type	Integer type (Integer)
Range	1 to 4
Note	If the specified variable is out of the allowable setup range, an error occurs when executed.

Return value

	<i>Value</i>
Description	Returns the response difference between the positive peak detected first when searched from the left edge toward the right edge within the analysis range and its right adjacent negative peak.
Data type	Double precision floating point type (Double)
Note	If no applicable point is detected, 0 is returned.

Example of use

```
Dim Value As Double
Value = FirstRightGap(1)
MsgBox "First Right Gap =" & Value
```

FirstRightInterval(*Chan*)

Syntax

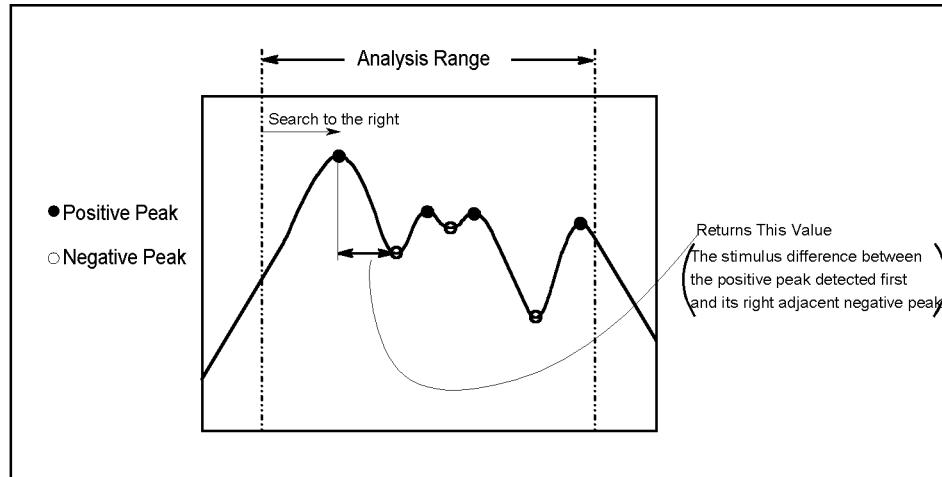

Value = FirstRightInterval(*Chan*)

Description

Returns the stimulus difference between the positive peak detected first when searched from the left edge toward the right edge within the analysis range and its right adjacent negative peak.

Figure 8-4

FirstRightInterval

e5070ave033

Variable

	<i>Chan</i>
Description	Specifies the channel number.
Data type	Integer type (Integer)
Range	1 to 4
Note	If the specified variable is out of the allowable setup range, an error occurs when executed.

Return value

	<i>Value</i>
Description	Returns the stimulus difference between the positive peak detected first when searched from the left edge toward the right edge within the analysis range and its right adjacent negative peak.
Data type	Double precision floating point type (Double)
Note	If no applicable point is detected, 0 is returned.

Example of use

```
Dim Value As Double

Value = FirstRightInterval(1)
MsgBox "First Right Interval =" & Value
```

GapMean(*Chan*)

Syntax

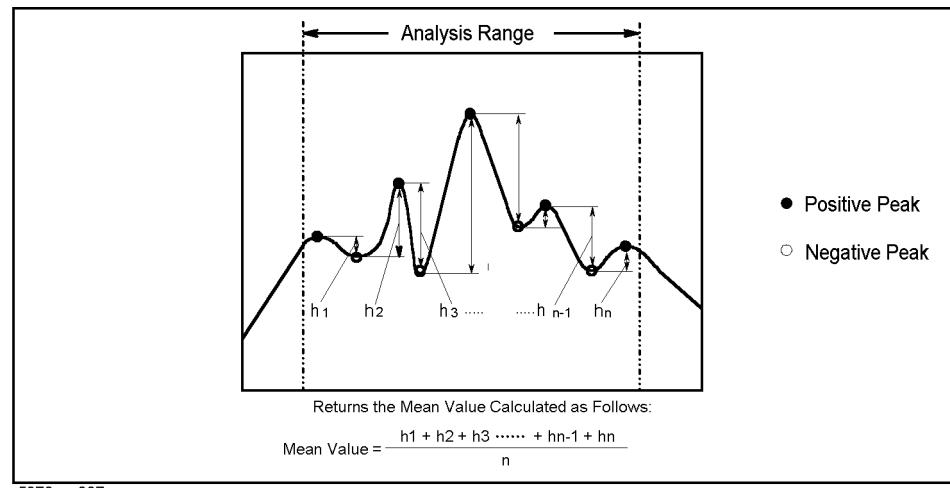

Value = GapMean(*Chan*)

Description

Returns the mean value of the response differences between the negative peaks and its adjacent positive peaks within the analysis range.

Figure 8-5

GapMean

Variable

	<i>Chan</i>
Description	Specifies the channel number.
Data type	Integer type (Integer)
Range	1 to 4
Note	If the specified variable is out of the allowable setup range, an error occurs when executed.

Return value

	<i>Value</i>
Description	Returns the mean value of the response differences between the negative peaks and its right and left adjacent positive peaks.
Data type	Double precision floating point type (Double)
Note	If no applicable point is detected, 0 is returned.

Example of use

```
Dim Value As Double
Value = GapMean(1)
MsgBox "Gap Mean =" & Value
```

MaxEnvelopeGap(*Chan*)

Syntax

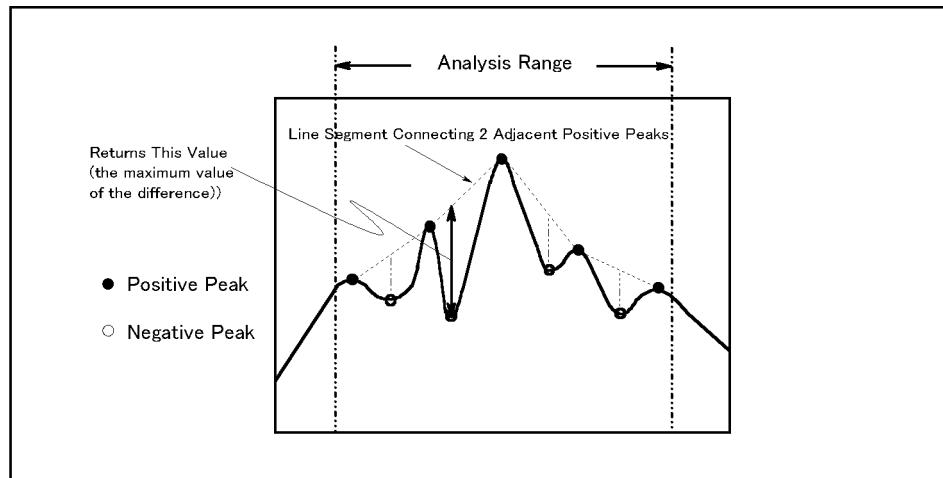

Value = MaxEnvelopeGap(*Chan*)

Description

Returns the maximum value of the vertical distance between the line segments connecting 2 adjacent positive peaks and the negative peaks between them within the analysis range.

Figure 8-6

MaxEnvelopeGap

e5070ave026

Variable

	<i>Chan</i>
Description	Specifies the channel number.
Data type	Integer type (Integer)
Range	1 to 4
Note	If the specified variable is out of the allowable setup range, an error occurs when executed.

Return value

	<i>Value</i>
Description	Returns the maximum value of the vertical distance between the line segments connecting 2 adjacent positive peaks and the negative peaks between them.
Data type	Double precision floating point type (Double)
Note	If no applicable point is detected, 0 is returned.

Example of use

```
Dim Value As Double
Value = MaxEnvelopeGap(1)
MsgBox "Max Envelope Gap =" & Value
```

MaxGap(*Chan*)

Syntax

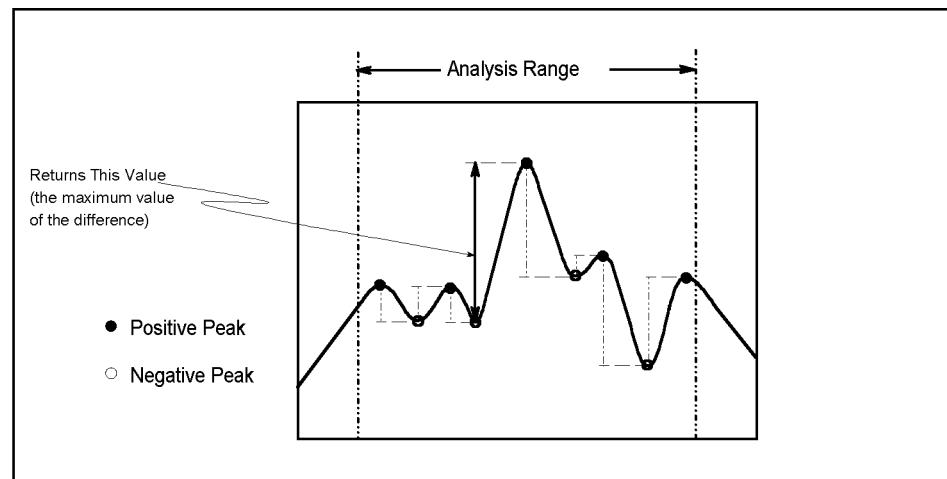

Value = MaxGap(*Chan*)

Description

Returns the maximum value of the response differences between the positive peaks and its adjacent negative peaks within the analysis range.

Figure 8-7

MaxGap

Variable

	<i>Chan</i>
Description	Specifies the channel number.
Data type	Integer type (Integer)
Range	1 to 4
Note	If the specified variable is out of the allowable setup range, an error occurs when executed.

Return value

	<i>Value</i>
Description	Returns the maximum value of the response differences between the positive peaks and its adjacent negative peaks.
Data type	Double precision floating point type (Double)
Note	If no applicable point is detected, 0 is returned.

Example of use

```
Dim Value As Double
Value = MaxGap(1)
MsgBox "Max Gap =" & Value
```

MaxLeftGap(*Chan*)

Syntax

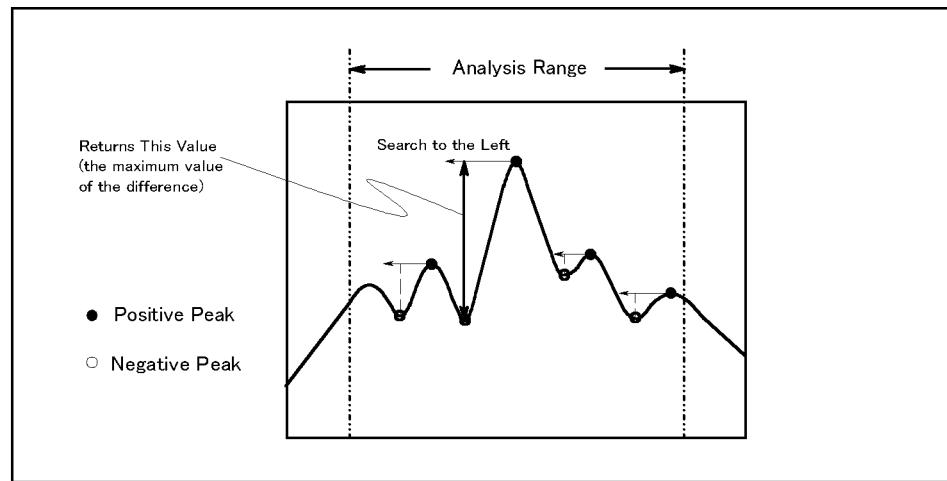

Value = MaxLeftGap(*Chan*)

Description

Returns the maximum value of the response differences between the positive peaks and its left adjacent negative peaks within the analysis range.

Figure 8-8

MaxLeftGap

Variable

	<i>Chan</i>
Description	Specifies the channel number.
Data type	Integer type (Integer)
Range	1 to 4
Note	If the specified variable is out of the allowable setup range, an error occurs when executed.

Return value

	<i>Value</i>
Description	Returns the maximum value of the response differences between the positive peaks and its left adjacent negative peaks.
Data type	Double precision floating point type (Double)
Note	If no applicable point is detected, 0 is returned.

Example of use

```
Dim Value As Double
Value = MaxLeftGap(1)
MsgBox "Max Left Gap =" & Value
```

MaxPeakToPeak(*Chan*)

Syntax

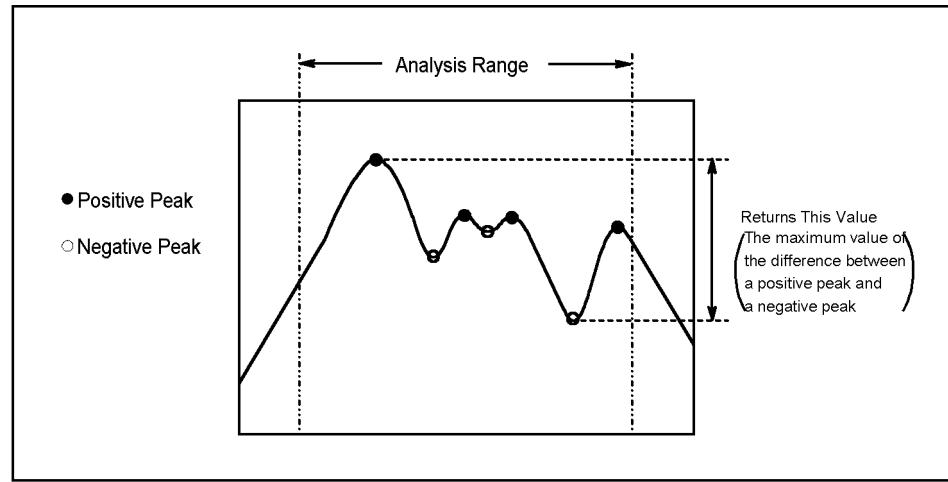

Value = MaxPeakToPeak(*Chan*)

Description

Returns the maximum value of the response differences between the positive peaks and the negative peaks within the analysis range.

Figure 8-9

MaxPeakToPeak

e5070ave022

Variable

	<i>Chan</i>
Description	Specifies the channel number.
Data type	Integer type (Integer)
Range	1 to 4
Note	If the specified variable is out of the allowable setup range, an error occurs when executed.

Return value

	<i>Value</i>
Description	Returns the maximum value of the response differences between the positive peaks and the negative peaks.
Data type	Double precision floating point type (Double)
Note	If no applicable point is detected, 0 is returned.

Example of use

```
Dim Value As Double
Value = MaxPeakToPeak(1)
MsgBox "Max Peak To Peak =" & Value
```

MaxRightGap(*Chan*)

Syntax

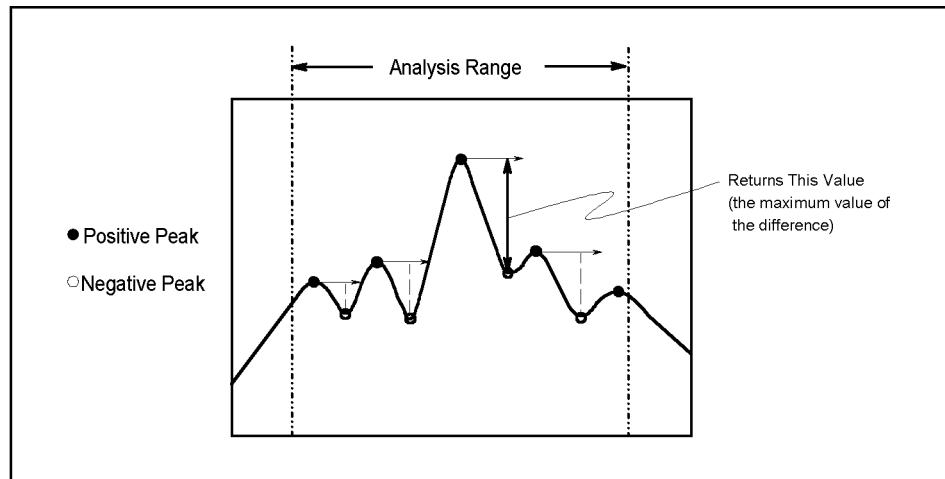

Value = MaxRightGap(*chan*)

Description

Returns the maximum value of the response differences between the positive peaks and its right adjacent negative peaks within the analysis range.

Figure 8-10

MaxRightGap

e5070ave023

Variable

	<i>Chan</i>
Description	Specifies the channel number.
Data type	Integer type (Integer)
Range	1 to 4
Note	If the specified variable is out of the allowable setup range, an error occurs when executed.

Return value

	<i>Value</i>
Description	Returns the maximum value of the response differences between the positive peaks and its right adjacent negative peaks.
Data type	Double precision floating point type (Double)
Note	If no applicable point is detected, 0 is returned.

Example of use

```
Dim Value As Double
Value = MaxRightGap(1)
MsgBox "Max Right Gap =" & Value
```

MaxRipplePoint(*Chan,Stim*)

Syntax

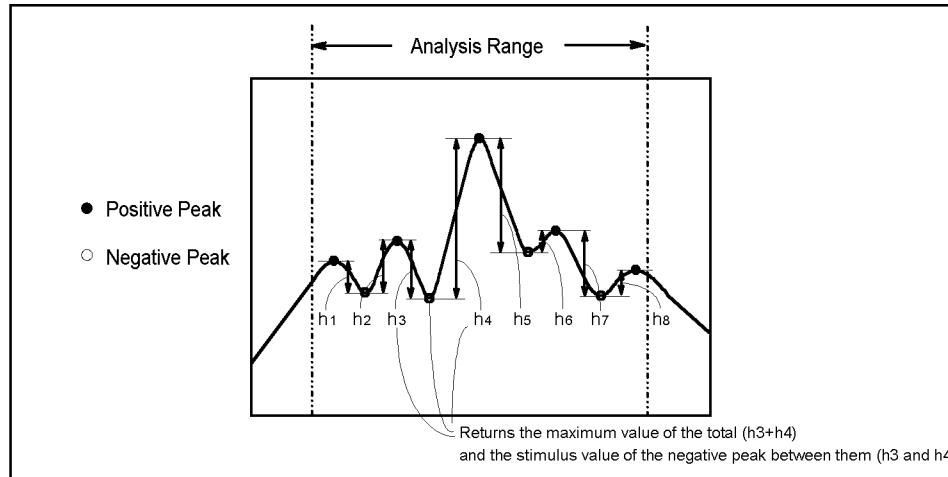

Value = MaxRipplePoint(*Chan,Stim*)

Description

Returns the maximum value of the sum of the response differences between the negative peaks and its adjacent positive peaks and the stimulus value of the applicable negative peaks within the analysis range.

Figure 8-11

MaxRipplePoint

Variable

	<i>Chan</i>
Description	Specifies the channel number.
Data type	Integer type (Integer)
Range	1 to 4
Note	If the specified variable is out of the allowable setup range, an error occurs when executed.

Return value

	<i>Value</i>
Description	Returns the maximum value of the sum of the response differences between the negative peaks and its adjacent positive peaks.
Data type	Double precision floating point type (Double)
Note	If no applicable point is detected, 0 is returned.

	<i>Stim</i>
Description	Returns the stimulus value of the negative peak at which the sum of the response differences between the negative peak and its adjacent positive peaks is maximum.
Data type	Double precision floating point type (Double)
Note	If no applicable point is detected, 0 is returned.

Example of use

```
Dim Value As Double
Dim Stim As Double

Value = MaxRipplePoint(1, Stim)
MsgBox "Max Ripple Value =" & Value & " , Stimulus =" & Stim
```

MaxRippleValue(*Chan*)

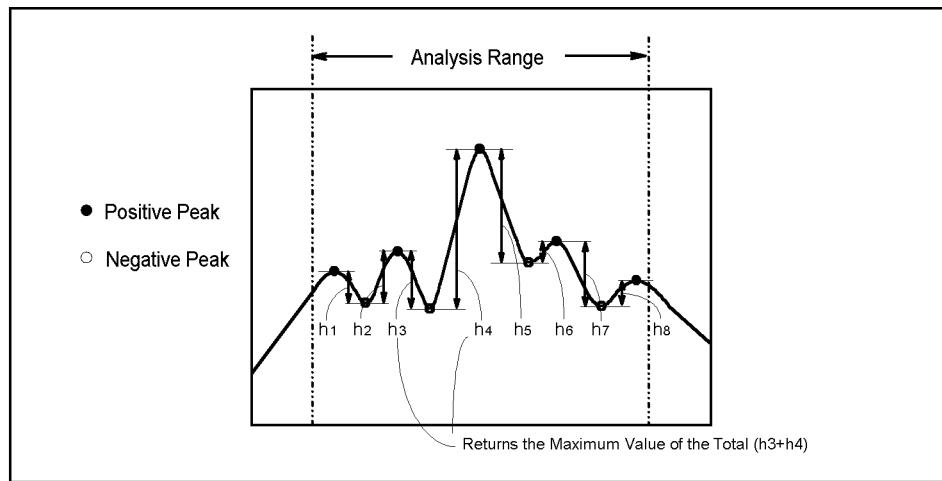

Syntax

Value = MaxRippleValue(*Chan*)

Description

Returns the maximum value of the sum of the response differences between the negative peaks and its adjacent positive peaks within the analysis range.

Figure 8-12

Variable

	<i>Chan</i>
Description	Specifies the channel number.
Data type	Integer type (Integer)
Range	1 to 4
Note	If the specified variable is out of the allowable setup range, an error occurs when executed.

Return value

	<i>Value</i>
Description	Returns the maximum value of the sum of the response differences between the negative peaks and its adjacent positive peaks.
Data type	Double precision floating point type (Double)
Note	If no applicable point is detected, 0 is returned.

Example of use

```
Dim Value As Double
Value = MaxRippleValue(1)
MsgBox "Max Ripple Value =" & Value
```

Pole(*Chan,D,LeftStim,LeftValue,RightStim,RightValue*)

Syntax

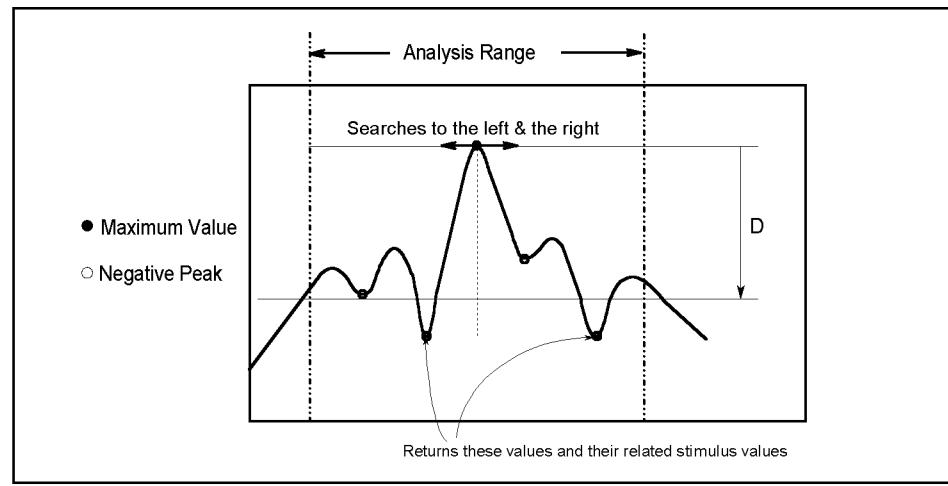

Call Pole(*Chan,D,LeftStim,LeftValue,RightStim,RightValue*)

Description

For the negative peaks below the specified value (*D*) relative to the maximum value of the positive peaks within the analysis range, returns the response value (*LeftValue*) and stimulus value (*LeftStimulus*) of the negative peak first detected when searched to the left from the maximum value of the positive peaks, and the response value (*RightValue*) and stimulus value (*RightStimulus*) of the negative peak first detected when searched to the right from the maximum value of the positive peaks.

Figure 8-13

Pole

Variable

	<i>Chan</i>
Description	Specifies the channel number.
Data type	Integer type (Integer)
Range	1 to 4
Note	If the specified variable is out of the allowable setup range, an error occurs when executed.

	<i>D</i>
Description	Specifies the difference from the maximum value.
Data type	Double precision floating point type (Double)

**Return value
(arguments)**

	<i>LeftStim</i>
Description	Returns the stimulus value of the negative peak first detected to the left from the maximum value of the positive peaks.
Data type	Double precision floating point type (Double)
Note	If no applicable point is detected, 0 is returned.

	<i>LeftValue</i>
Description	Returns the response value of the negative peak first detected to the left from the maximum value of the positive peaks.
Data type	Double precision floating point type (Double)
Note	If no applicable point is detected, 0 is returned.

	<i>RightStim</i>
Description	Returns the stimulus value of the negative peak first detected to the right from the maximum value of the positive peaks.
Data type	Double precision floating point type (Double)
Note	If no applicable point is detected, 0 is returned.

	<i>RightValue</i>
Description	Returns the response value of the negative peak first detected to the right from the maximum value of the positive peaks.
Data type	Double precision floating point type (Double)
Note	If no applicable point is detected, 0 is returned.

Example of use

```

Dim LeftStim As Double
Dim LeftValue As Double
Dim RightStim As Double
Dim RightValue As Double

Call Pole(1, 1, LeftStim, LeftValue, RightStim, RightValue)

MsgBox "Left Pole =" & LeftStim & ":" & LeftValue
MsgBox "Right Pole =" & RightStim & ":" & RightValue

```

Complex Operation Library

This chapter describes the complex operation library.

Complex operation library

By using the complex operation library, you can perform operations of complex numbers.

Data of the complex type

In the complex operation library, you can use the complex type (Complex) as a data type. Data of the complex type consists of a real part (.real) and an imaginary part (.imag) as shown in the following example.

```
Dim Num as Complex
Num.real=1.0
Num.imag=2.0
```

List of procedures

The following table lists the procedures included in the complex operation library.

Procedure name	Function
ComplexSet(x,y) on page 454	Sets a complex number. (Specify a real part and an imaginary part.)
ComplexPolar(x,y) on page 454	Sets a complex number. (Specify an absolute value and a phase angle.)
ComplexSetArray(x) on page 455	Converts a variant type or double floating point type array to a complex type array.
ComplexAdd(x,y) on page 451	Returns the result of the addition.
ComplexSub(x,y) on page 456	Returns the result of the subtraction.
ComplexMul(x,y) on page 453	Returns the result of the multiplication.
ComplexDiv(x,y) on page 452	Returns the result of the division.
ComplexAbs(x) on page 451	Returns the absolute value.
ComplexArg(x) on page 451	Returns the phase angle.
ComplexNorm(x) on page 454	Returns the square of the absolute value.
ComplexConj(x) on page 452	Returns the conjugate complex number.
ComplexCos(x) on page 452	Returns the cosine.
ComplexCosh(x) on page 452	Returns the hyperbolic cosine.
ComplexSin(x) on page 455	Returns the sine.
ComplexSinh(x) on page 455	Returns the hyperbolic sine.
ComplexExp(x) on page 453	Returns e^x .
ComplexLog(x) on page 453	Returns the natural logarithm.
ComplexLog10(x) on page 453	Returns the common logarithm.
ComplexSqrt(x) on page 456	Returns the square root.

Procedure Reference

This section describes the procedures in the complex operation library in alphabetical order.

ComplexAbs(x)

Syntax $Result = \text{ComplexAbs}(x)$

Description Returns the absolute value of a complex number x .

Data type x Complex type (Complex)

$Result$ Double precision floating point type (Double)

Example of use

```
Dim a As Complex, b As Double
a = ComplexSet(1.5, 2.0)
b = ComplexAbs(a)
```

ComplexAdd(x,y)

Syntax $Result = \text{ComplexAdd}(x,y)$

Description Returns the result ($x+y$) of the addition of a complex number x and another y .

Data type x Complex type (Complex)

y Complex type (Complex)

$Result$ Complex type (Complex)

Example of use

```
Dim a As Complex, b As Complex, c As Complex
a = ComplexSet(1.5, 2.0)
b = ComplexSet(0.5, 3.5)
c = ComplexAdd(a, b)
```

ComplexArg(x)

Syntax $Result = \text{ComplexArg}(x)$

Description Returns the phase angle (radian) of a complex number x .

Data type x Complex type (Complex)

$Result$ Double precision floating point type (Double)

Example of use

```
Dim a As Complex, b As Double, c As Double, pi As Double
a = ComplexSet(1.5, 2.0)
b = ComplexArg(a)
pi = 3.14159265
c = b * 180 / pi      ' radian -> degree
```

ComplexConj(x)

Syntax $Result = \text{ComplexConj}(x)$

Description Returns the conjugate complex number of a complex number x .

Data type x Complex type (Complex)
 $Result$ Complex type (Complex)

Example of use

```
Dim a As Complex, b As Complex
a = ComplexSet(1.5, 2.0)
b = ComplexConj(a)
```

ComplexCos(x)

Syntax $Result = \text{ComplexCos}(x)$

Description Returns the cosine ($\cos(x)$) of a complex number x .

Data type x Complex type (Complex)
 $Result$ Complex type (Complex)

Example of use

```
Dim a As Complex, b As Complex
a = ComplexSet(1.5, 2.0)
b = ComplexCos(a)
```

ComplexCosh(x)

Syntax $Result = \text{ComplexCosh}(x)$

Description Returns the hyperbolic cosine ($\cosh(x)$) of a complex number x .

Data type x Complex type (Complex)
 $Result$ Complex type (Complex)

Example of use

```
Dim a As Complex, b As Complex
a = ComplexSet(1.5, 2.0)
b = ComplexCosh(a)
```

ComplexDiv(x,y)

Syntax $Result = \text{ComplexDiv}(x,y)$

Description Returns the result (x/y) of the division of a complex number x and another y .

Data type x Complex type (Complex)
 y Complex type (Complex)
 $Result$ Complex type (Complex)

Example of use

```
Dim a As Complex, b As Complex, c As Complex
a = ComplexSet(1.5, 2.0)
b = ComplexSet(0.5, 3.5)
c = ComplexDiv(a, b)
```

ComplexExp(x)

Syntax $Result = \text{ComplexExp}(x)$

Description Returns e^x .

Data type x Complex type (Complex)
 $Result$ Complex type (Complex)

Example of use

```
Dim a As Complex, b As Complex
a = ComplexSet(1.5, 2.0)
b = ComplexExp(a)
```

ComplexLog(x)

Syntax $Result = \text{ComplexLog}(x)$

Description Returns the natural logarithm ($\log(x)$) of a complex number x .

Data type x Complex type (Complex)
 $Result$ Complex type (Complex)

Example of use

```
Dim a As Complex, b As Complex
a = ComplexSet(1.5, 2.0)
b = ComplexLog(a)
```

ComplexLog10(x)

Syntax $Result = \text{ComplexLog10}(x)$

Description Returns the common logarithm ($\log_{10}(x)$) of a complex number x .

Data type x Complex type (Complex)
 $Result$ Complex type (Complex)

Example of use

```
Dim a As Complex, b As Complex
a = ComplexSet(1.5, 2.0)
b = ComplexLog10(a)
```

ComplexMul(x,y)

Syntax $Result = \text{ComplexMul}(x,y)$

Description Returns the result ($x \cdot y$) of the multiplication of a complex number x and another y .

Data type x Complex type (Complex)
 y Complex type (Complex)
 $Result$ Complex type (Complex)

Example of use

```
Dim a As Complex, b As Complex, c As Complex
a = ComplexSet(1.5, 2.0)
b = ComplexSet(0.5, 3.5)
c = ComplexMul(a, b)
```

ComplexNorm(*x*)

Syntax $Result = \text{ComplexNorm}(x)$

Description Returns the square of the absolute value of a complex number *x*.

Data type *x* Complex type (Complex)

Result Double precision floating point type (Double)

Example of use

```
Dim a As Complex, b As Double
a = ComplexSet(1.5, 2.0)
b = ComplexNorm(a)
```

ComplexPolar(*x,y*)

Syntax $z = \text{ComplexPolar}(x,y)$

Description Sets a complex number to a complex type variable *z*. Specify a complex number with an absolute value *x* and a phase angle *y* (radian).

Data type *x* Double precision floating point type (Double)

y Double precision floating point type (Double)

z Complex type (Complex)

Example of use

```
Dim a As Complex, pi As Double
pi = 3.14159265
a = ComplexPolar(2.5, 60 * pi / 180)
```

ComplexSet(*x,y*)

Syntax $z = \text{ComplexSet}(x,y)$

Description Sets a complex number to a complex type variable *z*. Specify a complex number with a real part *x* and an imaginary part *y*. (Sets *x* and *y* to *z.real* and *z.imag* respectively.)

Data type *x* Double precision floating point type (Double)

y Double precision floating point type (Double)

z Complex type (Complex)

Example of use

```
Dim a as Complex
a = ComplexSet(1.5, 2.0)
```

ComplexSetArray(*x*)

Syntax $y = \text{ComplexSetArray}(x)$

Description Converts a variant type or double floating point type array *x* that contains complex numbers using 2 elements to store each complex number in the order of the real part and imaginary part to a complex type array *y*.

Data type x Variant type (Variant) array or Double precision floating point type (Double) array
 y Complex type (Complex) array

Example of use

```
Dim a as Variant, b as Complex
a = SCPI.CALCulate(1).SElected.DATA.SDATA
b = ComplexSetArray(a)
```

ComplexSin(*x*)

Syntax $Result = \text{ComplexSin}(x)$

Description Returns the sine ($\sin(x)$) of a complex number *x*.

Data type x Complex type (Complex)
Result Complex type (Complex)

Example of use

```
Dim a As Complex, b As Complex
a = ComplexSet(1.5, 2.0)
b = ComplexSin(a)
```

ComplexSinh(*x*)

Syntax $Result = \text{ComplexSinh}(x)$

Description Returns the hyperbolic sine ($\sinh(x)$) of a complex number *x*.

Data type x Complex type (Complex)
Result Complex type (Complex)

Example of use

```
Dim a As Complex, b As Complex
a = ComplexSet(1.5, 2.0)
b = ComplexSinh(a)
```

ComplexSqrt(*x*)

Syntax *Result* = ComplexSqrt(*x*)

Description Returns the square root (\sqrt{x}) of a complex number *x*.

Data type *x* Complex type (Complex)
 Result Complex type (Complex)

Example of use
Dim a As Complex, b As Complex
a = ComplexSet(1.5, 2.0)
b = ComplexSqrt(a)

ComplexSub(*x,y*)

Syntax *Result* = ComplexSub(*x,y*)

Description Returns the result (*x* – *y*) of the subtraction of a complex number *x* and another *y*.

Data type *x* Complex type (Complex)
 y Complex type (Complex)
 Result Complex type (Complex)

Example of use
Dim a As Complex, b As Complex, c As Complex
a = ComplexSet(1.5, 2.0)
b = ComplexSet(0.5, 3.5)
c = ComplexSub(a, b)

Manual Changes

This appendix contains the information required to adapt this manual to versions or configurations of the E5061A/E5062A manufactured earlier than the current printing date of this manual.

Manual Changes
Manual Changes

Manual Changes

To adapt this manual to your E5061A/E5062A, refer to Table A-1 and Table A-2.

Table A-1

Manual Changes by Serial Number

Serial Prefix or Number	Make Manual Changes

Table A-2

Manual Changes by Firmware Version

Version	Make Manual Changes
A.02.00 or later	Change 1
A.02.10 or later	Change 2
A.03.00 or later	Change 3

Agilent Technologies uses a two-part, ten-character serial number that is stamped on the serial number plate (Figure A-1).

Figure A-1

Example of Serial Number Plate

Change 3

The firmware revision A.02.10 or below does not support the following functions. Please disregard the descriptions of these functions in this manual.

- Compliant with LXI (Lan eXtensions for Instrumentation) standard Class C.*¹

Change 2

The firmware revision A.02.00 or below does not support the following functions. Please disregard the descriptions of these functions in this manual.

- Offset limit line function
- Ripple test function
- Bandwidth test function

The firmware revision A.02.00 and below does not support the following COM objects. Please delete their descriptions in this manual.

- SCPI.CALCulate(Ch).SElected.BLIMit.DB on page 129
- SCPI.CALCulate(Ch).SElected.BLIMit.DISPlay.MARKer on page 130
- SCPI.CALCulate(Ch).SElected.BLIMit.DISPlay.VALUE on page 131
- SCPI.CALCulate(Ch).SElected.BLIMit.FAIL on page 132

Change 1

The following functions are newly integrated into the firmware version A.02.00 onward.
They are not supported by firmware version A.01.0x.

- User preset function.
- Notch search function
- Function to all the marker value are displayed.
- Function to change display position where marker value are displayed.
- Function to align the marker value.
- Display the overlap limit lines.
- Reference tracking function.
- Function to change display value where Y axis are displayed.
- Frequency information appearing as asterisks.
- User recovery function.*¹
- Remote control using HTTP.*¹

*1. This function is available when the volume label of the hard disk is AL200 or higher.

The firmware version A.01.0x does not support the following COM objects. Please delete their descriptions in this manual.

- SCPI.CALCulate(Ch).SElected.LIMit.DISPlay.CLIP on page 160
- SCPI.CALCulate(Ch).SElected.MARKer(Mk).NOTCh. DATA on page 200
- SCPI.CALCulate(Ch).SElected.MARKer.NOTCh.STATE on page 201
- SCPI.CALCulate(Ch).SElected.MARKer(Mk).NOTCh. THreshold on page 202
